"We are now acting because the risks of inaction would be far greater. In one year, or five years, the power of Iraq to inflict harm on all free nations would be multiplied many times over. With these capabilities, Saddam Hussein and his terrorist allies could choose the moment of deadly conflict when they are strongest. We choose to meet that threat now, where it arises, before it can appear suddenly in our

skies and cities."
Iraq has never threatened to attack the United States nor does it have the ability to attack the United States. That country became a formidable military threat back in the 1980s as a result of support from
industrialized nations like the U.S., Great Britain, France, Germany, and Russia. With a strict military embargo imposed upon the country since 1990, it will be extremely difficult for Iraq to become a military
threat to the United States or any other country.

"The cause of peace requires all free nations to recognize new and undeniable realities. In the 20th century, some chose to appease murderous dictators, whose threats were allowed to grow into genocide and global war. In this century, when evil men plot chemical, biological
and nuclear terror, a policy of appeasement could bring destruction of a
kind never before seen on this earth."
The analogy with Hitler's Germany and other Axis powers is spurious. Germany was the most powerful industrialized country in the world in the
1930s. Iraq, by contrast, is a poor, third-world country that has had most of its military infrastructure destroyed and has been under the strictest military and economic sanctions in world history. The current
UN policy of inspections, sanctions, and the threat of UN-sanctioned war
if Iraq again threatens its neighbors can hardly be considered "appeasement." None of the Axis powers of the 1930s were ever subjected
to such international pressure until they had invaded and occupied dozens of nations in Europe, Asia, and Africa. Iraq has not invaded and
occupied any countries since its six-month occupation of Kuwait in 1990-
91.

"Terrorists and terror states do not reveal these threats with fair notice, in formal declarations--and responding to such enemies only after they have struck first is not self-defense, it is suicide. The security of the world requires disarming Saddam Hussein now."
Essentially, President Bush is saying that a country has the right to invade and occupy another country without any evidence that the targeted
country has the intention, willingness, or ability to strike first. This
would give virtually any country the right to invade any other. Most of
Iraq's neighbors do not consider Iraq to be a threat, either now or in the perceivable future.

"As we enforce the just demands of the world, we will also honor the deepest commitments of our country."
Violating the U.S. Constitution and international legal covenants to which the U.S. government is legally bound is, in reality, a dishonor to
the deepest commitments of the United States.

"Unlike Saddam Hussein, we believe the Iraqi people are deserving and capable of human liberty. And when the dictator has departed, they can set an example to all the Middle East of a vital and peaceful and self-
governing nation."
If the United States really believes the Iraqi people are deserving and
capable of human liberty, then why did the U.S. support Saddam Hussein during the height of his terror? And why are the leading candidates the
United States hopes to install in Baghdad to replace the current dictatorship lacking anything remotely resembling democratic credentials?

"The United States, with other countries, will work to advance liberty and peace in that region."
Then why does the United States support dictatorships in Egypt, Saudi Arabia, Oman, Kuwait, Pakistan, Uzbekistan, and other autocratic regimes? And why does the United States support Moroccan, Israeli, and Turkish occupation forces? Such policies belie any claim of support for
liberty and peace.

"Our goal will not be achieved overnight, but it can come over time. The
power and appeal of human liberty is felt in every life and every land.
And the greatest power of freedom is to overcome hatred and violence, and turn the creative gifts of men and women to the pursuits of peace."
To unleash bombs and missiles on cities, to engage in war-mongering, and
to lie to the American people and the world in order to rationalize such
an invasion is itself a form of hatred and violence.

"That is the future we choose. Free nations have a duty to defend our people by uniting against the violent. And tonight, as we have done before, America and our allies accept that responsibility. Good night, and may God continue to bless America."
And may God forgive President Bush and the congressional leaders of both
parties who are responsible for unleashing such horrific violence against the people of Iraq.

A War Crime or an Act of War?
By STEPHEN C. PELLETIERE

MECHANICSBURG, Pa. - It was no surprise that President Bush, lacking smoking-gun evidence of
Iraq's weapons programs, used his State of the Union address to re-emphasize the moral case for
an invasion: "The dictator who is assembling the world's most dangerous weapons has already
used them on whole villages, leaving thousands of his own citizens dead, blind or disfigured."
The accusation that Iraq has used chemical weapons against its citizens is a familiar part of
the debate. The piece of hard evidence most frequently brought up concerns the gassing of Iraqi
Kurds at the town of Halabja in March 1988, near the end of the eight-year Iran-Iraq war.
President Bush himself has cited Iraq's "gassing its own people," specifically at Halabja, as a
reason to topple Saddam Hussein.
But the truth is, all we know for certain is that Kurds were bombarded with poison gas that day
at Halabja. We cannot say with any certainty that Iraqi chemical weapons killed the Kurds. This
is not the only distortion in the Halabja story.
I am in a position to know because, as the Central Intelligence Agency's senior political
analyst on Iraq during the Iran-Iraq war, and as a professor at the Army War College from 1988
to 2000, I was privy to much of the classified material that flowed through Washington having

to do with the Persian Gulf. In addition, I headed a 1991 Army investigation into how the
Iraqis would fight a war against the United States; the classified version of the report went
into great detail on the Halabja affair.
This much about the gassing at Halabja we undoubtedly know: it came about in the course of a
battle between Iraqis and Iranians. Iraq used chemical weapons to try to kill Iranians who had
seized the town, which is in northern Iraq not far from the Iranian border. The Kurdish
civilians who died had the misfortune to be caught up in that exchange. But they were not
Iraq's main target.
And the story gets murkier: immediately after the battle the United States Defense Intelligence
Agency investigated and produced a classified report, which it circulated within the
intelligence community on a need-to-know basis. That study asserted that it was Iranian gas
that killed the Kurds, not Iraqi gas.
The agency did find that each side used gas against the other in the battle around Halabja. The
condition of the dead Kurds' bodies, however, indicated they had been killed with a blood
agent - that is, a cyanide-based gas - which Iran was known to use. The Iraqis, who are thought
to have used mustard gas in the battle, are not known to have possessed blood agents at the
time.
These facts have long been in the public domain but, extraordinarily, as often as the Halabja
affair is cited, they are rarely mentioned. A much-discussed article in The New Yorker last
March did not make reference to the Defense Intelligence Agency report or consider that Iranian
gas might have killed the Kurds. On the rare occasions the report is brought up, there is
usually speculation, with no proof, that it was skewed out of American political favoritism
toward Iraq in its war against Iran.
I am not trying to rehabilitate the character of Saddam Hussein. He has much to answer for in
the area of human rights abuses. But accusing him of gassing his own people at Halabja as an
act of genocide is not correct, because as far as the information we have goes, all of the
cases where gas was used involved battles. These were tragedies of war. There may be
justifications for invading Iraq, but Halabja is not one of them.

In fact, those who really feel that the disaster at Halabja has bearing on today might want to consider a different question: Why was Iran so keen on taking the town? A closer look may shed light on America's impetus to invade Iraq.

We are constantly reminded that Iraq has perhaps the world's largest reserves of oil. But in a regional and perhaps even geopolitical sense, it may be more important that Iraq has the most extensive river system in the Middle East. In addition to the Tigris and Euphrates, there are the Greater Zab and Lesser Zab rivers in the north of the country. Iraq was covered with irrigation works by the sixth century A.D., and was a granary for the region.

Before the Persian Gulf war, Iraq had built an impressive system of dams and river control projects, the largest being the Darbandikhan dam in the Kurdish area. And it was this dam the Iranians were aiming to take control of when they seized Halabja. In the 1990's there was much discussion over the construction of a so-called Peace Pipeline that would bring the waters of the Tigris and Euphrates south to the parched Gulf states and, by extension, Israel. No progress has been made on this, largely because of Iraqi intransigence. With Iraq in American hands, of course, all that could change.

Thus America could alter the destiny of the Middle East in a way that probably could not be challenged for decades - not solely by controlling Iraq's oil, but by controlling its water.

Even if America didn't occupy the country, once Mr. Hussein's Baath Party is driven from power, many lucrative opportunities would open up for American companies.

All that is needed to get us into war is one clear reason for acting, one that would be generally persuasive. But efforts to link the Iraqis directly to Osama bin Laden have proved inconclusive. Assertions that Iraq threatens its neighbors have also failed to create much resolve; in its present debilitated condition - thanks to United Nations sanctions - Iraq's conventional forces threaten no one.

Perhaps the strongest argument left for taking us to war quickly is that Saddam Hussein has committed human rights atrocities against his people. And the most dramatic case are the accusations about Halabja.

Before we go to war over Halabja, the administration owes the American people the full facts.

And if it has other examples of Saddam Hussein gassing Kurds, it must show that they were not
pro-Iranian Kurdish guerrillas who died fighting alongside Iranian Revolutionary Guards. Until
Washington gives us proof of Saddam Hussein's supposed atrocities, why are we picking on Iraq
on human rights grounds, particularly when there are so many other repressive regimes
Washington supports?
Stephen C. Pelletiere is author of "Iraq and the International Oil System: Why America Went to
War in the Persian Gulf."

Responding to Bush's speech line by line, lie by lie

An Annotated Critique of President George W. Bush's March 17 Address Preparing the Nation for War

FPIF Middle Eastern Editor, Stephen Zunes, provides an annotated critique of the president's address to the nation about imminent war against Iraq. Given that the Democratic Party leadership in Congress declined to take their traditional opportuntity to offer a formal response, FPIF provides a response to all the president's arguments for
war. Line by line, argument by argument, falsehood by falsehood, Zunes responds to the president.

Stephen Zunes is an associate professor of politics and chair of the Peace & Justice Studies Program at the University of San Francisco.

(Editors' Note: Below is a transcript of President George W. Bush's address to the nation on Monday, March 17, announcing his readiness to order a U.S. invasion of Iraq followed by an analysis highlighting some
of the lies and misleading statements in the speech. Such an overview is
necessary since the Democratic Party leadership in Congress, which has pledged to support the president in the event of war, declined to take their traditional opportunity to offer a formal response. The Green Party, which opposes the war, was not given the opportunity by the networks to respond.)

"My fellow citizens, events in Iraq have now reached the final days of decision. For more than a decade, the United States and other nations have pursued patient and honorable efforts to disarm the Iraqi regime without war."
This is patently false. In 1998, President Bill Clinton successfully pressured UNSCOM director Richard Butler to withdraw inspectors without
authorization from the Secretary General or the Security Council--before
their mission was complete--in order to engage in a four-day heavy

bombing campaign against Iraq. As predicted at the time, this illegal use of military force--combined with revelations that the United States had abused the inspections process for espionage purposes--resulted in the Iraqi government barring the inspectors' return until a reorganized inspections commission known as UNMOVIC commenced inspections last year. UNMOVIC chairman Hans Blix and UN Secretary General Kofi Annan explicitly called upon the United States and the international community to give the inspectors more time to do their job, noting that it would take a number of months before their mission could be completed.

"That regime pledged to reveal and destroy all its weapons of mass destruction as a condition for ending the Persian Gulf War in 1991." Iraq was presented with this demand as part of UN Security Council resolution 687, which mandated Iraqi disarmament of its weapons of mass destruction and related delivery systems. This was a unilateral decree from the Security Council which--while nominally part of the ceasefire agreement--was void of any explicit threat to continue prosecuting the war if Iraq did not agree to the disarmament provisions. It is noteworthy that the demand for Iraqi disarmament in the resolution was put forward within the context of a call for regional disarmament. The United States has refused to encourage any regional disarmament initiative, however, and remains a strong supporter of the Israeli and Pakistani governments, which have advanced nuclear arsenals among other weapons of mass destruction.

"Since then, the world has engaged in 12 years of diplomacy. We have passed more than a dozen resolutions in the United Nations Security Council. We have sent hundreds of weapons inspectors to oversee the disarmament of Iraq. Our good faith has not been returned. The Iraqi regime has used diplomacy as a ploy to gain time and advantage. It has uniformly defied Security Council resolutions demanding full disarmament." Iraq's cooperation has indeed been less than total, but most independent reports--even during UNSCOM's inspections regime between 1991 and 1998--conclude that cooperation was close to 90%. According to UNMOVIC, Iraq's cooperation since inspections resumed last year has been far better.

"Over the years, UN weapon inspectors have been threatened by Iraqi officials, electronically bugged, and systematically deceived." This was not an uncommon practice during the UNSCOM era, but there have been no reports from UNMOVIC of such harassment subsequently.

"Peaceful efforts to disarm the Iraqi regime have failed again and again--because we are not dealing with peaceful men."
Peaceful efforts at disarming Iraq have succeeded in eliminating somewhere between 95% and 100% of Iraq's weapons of mass destruction and
related materiel and delivery systems as a result of UN Security Council
resolution 687 and subsequent resolutions. The determination to go to war despite such success raises serious questions as to whether the United States is governed by peaceful men.

"Intelligence gathered by this and other governments leaves no doubt that the Iraq regime continues to possess and conceal some of the most lethal weapons ever devised."
If the United States really has evidence that the Iraqi government continues to possess and conceal weapons of mass destruction, why has the Bush administration refused to make such evidence public or pass such intelligence on to United Nations inspectors, who have the authority to destroy them?

"This regime has already used weapons of mass destruction against Iraq's
neighbors and against Iraq's people."
Iraq did use chemical weapons against Iranian troops and Kurdish civilians back in the 1980s when Saddam Hussein's regime was being supported by the United States. The Reagan administration covered up for
the Halabja massacre and similar attacks against Kurdish civilians by falsely claiming that it was the Iranians--then the preferred enemy--who
were responsible. In addition, the U.S. Defense Intelligence Agency provided Iraq with U.S. satellite data to help Saddam Hussein's forces locate Iranian troop concentrations in the full knowledge that they were
using chemical weapons. Many of the key components of Iraq's chemical weapons program came from the United States, ostensibly for pesticides as part of taxpayer-funded agricultural subsidies, despite evidence that
these U.S.-manufactured chemicals were probably being diverted for use in illegal chemical weapons.

"The regime has a history of reckless aggression in the Middle East."
This is true, though Iraq's invasion of Iran in 1980 was quietly supported by the U.S. government and ambivalent signals by the U.S. ambassador to Iraq immediately prior to the Iraqi invasion of Kuwait may
have emboldened Saddam Hussein to conquer the sheikdom in 1990. Now, with Iraq's offensive military capability just a fraction of what is was
during that period and an unambiguous resolve by the international community to thwart such future aggression, there is little chance of Iraq invading another country again.

"It has a deep hatred of America and our friends."
Iraq willingly accepted U.S. support during the 1980s. The more belligerent posture of recent years is largely a result of the U.S. destruction of much of the country's military and civilian infrastructure in the 1991 Gulf War, which was supported by a number of other Middle Eastern states with which Iraq had also once collaborated and been on friendly terms. Subsequent U.S.-led sanctions, periodic bombing raids, and invasion threats have resulted in widespread suffering of the population that has intensified anti-American sentiment. Had the United States adopted a more enlightened policy, such deep hatred would likely have not developed.

"And it has aided, trained, and harbored terrorists, including operatives of al Qaeda."
Every independent investigation of every Bush administration claim of a connection between the secular Iraqi government and the Islamist al Qaeda network has found no evidence of any Iraqi aid, training, or harboring of al Qaeda terrorists. According to both published U.S. government reports and independent analyses, Iraq's support for international terrorism--which has always been restricted to secular nationalists like the radical Palestinian Abu Nidal faction--peaked in the 1980s.

"The danger is clear: using chemical, biological or, one day, nuclear weapons, obtained with the help of Iraq, the terrorists could fulfill their stated ambitions and kill thousands or hundreds of thousands of innocent people in our country, or any other. The United States and other nations did nothing to deserve or invite this threat. But we will do everything to defeat it. Instead of drifting along toward tragedy, we will set a course toward safety. Before the day of horror can come, before it is too late to act, this danger will be removed."
The Bush administration has failed to present any evidence that Iraq has the intention to pass on weapons of mass destruction to terrorists, an act that would inevitably lead to a U.S.-led invasion, only in this case with the support of the international community. This is the essence of deterrence, which protected the United States and its allies from Josef Stalin, Mao Zedung, and other leaders as tyrannical and far more powerful militarily than Saddam Hussein. And no country has the right to invade another on some far-fetched scenario that they might do something someday. Ironically, as the CIA has noted in a report released this past

October, Saddam Hussein would not likely use WMDs as a first strike, but
in the case of a U.S. invasion--with nothing to lose and the logic of
deterrence no longer in effect--would be far more likely to use whatever
WMDs he may possess. In other words, a U.S. invasion, rather than
preventing the use of weapons of mass destruction, would be the most
likely--and the only realistic--scenario that such horrible weapons
would be utilized.

"The United States of America has the sovereign authority to use force
in assuring its own national security. That duty falls to me, as
Commander-in-Chief, by the oath I have sworn, by the oath I will keep."
The oath of office also demands that the president uphold and defend the
Constitution of the United States, which forbids such an illegal use of
force. Virtually no international legal authority recognizes such an
invasion as an act of assuring legitimate national security interests.

"Recognizing the threat to our country, the United States Congress voted
overwhelmingly last year to support the use of force against Iraq."
The U.S. Congress--with the support of both the Republican and
Democratic leadership--did authorize the use of force against Iraq.
However, the resolution violates Article I, Section 8 of the U.S.
Constitution which does not allow Congress to grant such open-ended
warmaking authority to the president for an offensive military action.
Only a formal declaration of war in such a situation can be considered
legitimate. Furthermore, Article VI of the Constitution declares that
international treaties to which the United States is a party are to be
treated as supreme law, thereby proscribing Congress from passing any
resolution that violates the UN Charter, such as supporting an invasion
of a sovereign nation. As a result, this resolution is unconstitutional
and thereby invalid.

"America tried to work with the United Nations to address this threat
because we wanted to resolve the issue peacefully. We believe in the
mission of the United Nations."
Then why is the United States violating the UN Charter, which forbids
the use of military force unless a country finds itself under armed
attack or it is explicitly authorized by the UN Security Council? The
mission of the United Nations is to preserve international peace and
security, not to approve the invasion of one country by another.

"One reason the UN was founded after the Second World War was to
confront aggressive dictators, actively and early, before they can
attack the innocent and destroy the peace."

The United States refused to confront Saddam Hussein active and early when he was committing acts of aggression against Iranians and Kurds and opposed decisive action by the United Nations. Iraq's ability to attack the innocent and destroy the peace has already been reduced dramatically through a series of actions by the United Nations, including authorizing the use of force to remove Iraqi occupation forces from Kuwait, placing strict military sanctions against the dictatorship, and overseeing the most aggressive unilateral disarmament effort and inspections regime in history.

"In the case of Iraq, the Security Council did act, in the early 1990s. Under Resolutions 678 and 687--both still in effect--the United States and our allies are authorized to use force in ridding Iraq of weapons of mass destruction. This is not a question of authority, it is a question of will."

The assertion that resolutions 678 and 687 give the United States the right to invade Iraq is patently false. Resolution 678 authorized the use of force to enforce prior UN Security Council resolutions demanding that Iraq remove its occupation forces from Kuwait. Once that was accomplished in late February 1991, the resolution became moot. Resolution 687 called for Iraqi disarmament of weapons of mass destruction and related delivery systems, but--even though it was the most detailed resolution in the history of the United Nations--no enforcement mechanism was specified. According to United Nations Charter, such resolutions can be enforced militarily only if the Security Council as a whole recognizes that a country is in material breach, determines that all non-military means have been exhausted, and specifically authorizes the use of force. The Security Council has not done so subsequent to the passage of resolution 678 in late November 1990.

"Last September, I went to the UN General Assembly and urged the nations of the world to unite and bring an end to this danger. On November 8th, the Security Council unanimously passed Resolution 1441, finding Iraq in material breach of its obligations, and vowing serious consequences if Iraq did not fully and immediately disarm."

True, but it did not authorize the use of force. Article 14 of that

resolution specifically noted that the Security Council would "remain seized of the matter," reiterating that only the Security Council as a whole--not any one member state--has the power to determine whether military force can be legitimately utilized to enforce its resolution.

"Today, no nation can possibly claim that Iraq has disarmed."
There actually are some nations that believe that Iraq has disarmed under the resolutions. Though this is not likely the case, the Bush administration has been unable to present clear evidence to the contrary.

"And it will not disarm so long as Saddam Hussein holds power."
This is sheer speculation. As a dictator who has proven his desire to ruthlessly hold on to power at all costs, he very well could disarm to save his regime. However, the Bush administration has made clear its intention to invade anyway, thereby providing little incentive for Saddam Hussein to do so.

"For the last four-and-a-half months, the United States and our allies have worked within the Security Council to enforce that Council's long-
standing demands. Yet, some permanent members of the Security Council have publicly announced they will veto any resolution that compels the disarmament of Iraq. These governments share our assessment of the danger, but not our resolve to meet it."
Actually, most Security Council members do not believe that Iraq is the
imminent threat that the United States claims it to be, though, if convincing evidence were presented that Iraq indeed posed a threat to international peace and security, a clear majority of the Security Council--including France--have indicated their willingness to authorize
the use of force. A veto of the proposed U.S.-sponsored resolution by France, Russia, and China would probably not have been necessary since the United States was unable--despite enormous pressure, including promises of increased foreign aid, trade preferences, and other incentives--to convince a simple majority of nations on the Council that
it was necessary to take the unprecedented step of authorizing the United States to invade Iraq, overthrow the government, and replace it with one more to its liking.

"Many nations, however, do have the resolve and fortitude to act against
this threat to peace, and a broad coalition is now gathering to enforce
the just demands of the world."
There is nothing close to the broad coalition such as that which joined
the United States in ridding Iraqi occupation forces from Kuwait in 1991, when Iraq clearly did constitute a threat to peace. As of this

writing, only one major power (Great Britain) and two minor powers (Spain and Australia) have offered to send troops. All three of these governments are doing so contrary to the sentiments of the vast majority
of their population and their combined participation still leaves the United States contributing at least 85% of combat forces. As columnist Maureen Dowd noted, since the Bush administration has driven virtually everyone from the schoolyard, it now has to rely on imaginary friends.

"The United Nations Security Council has not lived up to its responsibilities, so we will rise to ours."
In reality, the United Nations Security Council has gone to extraordinary efforts to minimize any threat to peace from Iraq, including authorizing the use of force in 1990 to enforce resolutions requiring an Iraqi withdrawal from occupied Kuwait, the imposition of strict sanctions against Iraq, and the creation of an inspections regime
that has been largely--if not 100%--effective. By contrast, it is not the responsibility of the United States or any country to invade a sovereign nation when it feels like it.

"In recent days, some governments in the Middle East have been doing their part. They have delivered public and private messages urging the dictator to leave Iraq, so that disarmament can proceed peacefully. He has thus far refused. All the decades of deceit and cruelty have now reached an end. Saddam Hussein and his sons must leave Iraq within 48 hours. Their refusal to do so will result in military conflict, commenced at a time of our choosing. For their own safety, all foreign nationals--including journalists and inspectors--should leave Iraq immediately."
President Bush has no authorization to demand that United Nations inspectors or foreign nationals leave Iraq. Nor does he have the right to demand that Saddam Hussein and his sons leave their country. No Security Council resolutions require that Saddam Hussein resign or that
he and any other member of his family go into exile. And neither the United States nor any other country has the right to commence an invasion of another country at the time of its choosing.

"Many Iraqis can hear me tonight in a translated radio broadcast, and I
have a message for them. If we must begin a military campaign, it will be directed against the lawless men who rule your country and not against you."
It is highly likely that a major U.S. military campaign--particularly one with such a heavy reliance on air power and the determination to seize by force a capital city of over five million people--will result in the deaths of thousands of innocent Iraqi civilians.

"As our coalition takes away their power, we will deliver the food and medicine you need."

In large part as a result of the U.S.-led sanctions, there are already severe shortages of food and medicines in Iraq. Strict and mostly equitable rationing have left few Iraqi families with more than a couple
of days' worth of food in storage. It is unlikely that the United States
will be able to supply most Iraqis with the food and medicine they need
in any timely manner.

"We will tear down the apparatus of terror and we will help you to build
a new Iraq that is prosperous and free. In a free Iraq, there will be no
more wars of aggression against your neighbors, no more poison factories, no more executions of dissidents, no more torture chambers and rape rooms."
The fact that the United States has supported scores of regimes--including a number in the Middle East--that have tortured, raped, and murdered dissidents raises serious questions as to whether the Bush administration really supports a free Iraq. The Bush administration's ongoing support of Moroccan occupation forces in Western Sahara, Turkish
occupation forces in northern Cyprus, and Israeli occupation forces in the West Bank, the Gaza Strip, and the Golan Heights raises serious questions as to whether the United States is actually bothered by countries that commit acts of aggression against neighbors. The United States also supports a number of Middle Eastern countries that are believed to have developed chemical weapons, similarly raising questions
as to whether the Bush administration is really worried about "poison factories."

"The tyrant will soon be gone. The day of your liberation is near."
Most Iraqis would certainly welcome the end of Saddam Hussein's regime.
But it is highly questionable whether a Western nation that has already
wrought enormous suffering for the Iraqi people, invades the country, and installs one of its own generals as a provisional military governor
will be seen as an act of liberation or a foreign occupation.

"It is too late for Saddam Hussein to remain in power. It is not too late for the Iraqi military to act with honor and protect your country by permitting the peaceful entry of coalition forces to eliminate weapons of mass destruction."
First, it is hard to imagine any national army--even under the most ruthless of dictators--that would not resist a foreign invasion. Second,
if the United States knows where these alleged weapons of mass

destruction are located, why haven't U.S. government officials informed
UNMOVIC inspectors, who have the authority to destroy them?

"Our forces will give Iraqi military units clear instructions on actions
they can take to avoid being attacked and destroyed. I urge every member
of the Iraqi military and intelligence services, if war comes, do not
fight for a dying regime that is not worth your own life. And all Iraqi
military and civilian personnel should listen carefully to this warning.
In any conflict, your fate will depend on your action. Do not destroy
oil wells, a source of wealth that belongs to the Iraqi people. Do not
obey any command to use weapons of mass destruction against anyone,
including the Iraqi people. War crimes will be prosecuted. War criminals
will be punished. And it will be no defense to say, "I was just
following orders"."
The United States has actively undermined and refused to participate in
the International Criminal Court, which was designed to try and punish
war criminals like Saddam Hussein. As a result, any such trials will
likely be under the tutelage of an occupying American army, which will
be seen by the vast majority of the international community as
illegitimate. For a foreign occupation army to try and punish leaders of
an internationally recognized government--however reprehensible they may
be--is in itself a war crime and would make these thugs martyrs in the
eyes of much of the world.

"Should Saddam Hussein choose confrontation, the American people can
know that every measure has been taken to avoid war, and every measure
will be taken to win it."
Refusing an illegitimate order by a foreign government to surrender
power is not choosing confrontation. And, clearly, the Bush
administration has not taken "every measure to avoid war."

"Americans understand the costs of conflict because we have paid them in
the past. War has no certainty, except the certainty of sacrifice. Yet,
the only way to reduce the harm and duration of war is to apply the full
force and might of our military, and we are prepared to do so. If Saddam
Hussein attempts to cling to power, he will remain a deadly foe until
the end. In desperation, he and terrorists groups might try to conduct
terrorist operations against the American people and our friends.

These
attacks are not inevitable. They are, however, possible."
Then why prosecute and unnecessary and illegal war?

"And this very fact underscores the reason we cannot live under the
threat of blackmail. The terrorist threat to America and the world
will
be diminished the moment that Saddam Hussein is disarmed."
According to the CIA and other estimates, Iraq has not engaged in any anti-American terrorism since the alleged 1993 assassination attempt against former President George Bush and has already dramatically reduced his support for international terrorism since the 1980s, when the United States was supporting his government. By contrast, most intelligence analyses predict an increase in the terrorist threat to America and its allies should the United States invade Iraq.

"Our government is on heightened watch against these dangers. Just as
we
are preparing to ensure victory in Iraq, we are taking further actions to protect our homeland. In recent days, American authorities have expelled from the country certain individuals with ties to Iraqi intelligence services. Among other measures, I have directed
additional
security of our airports, and increased Coast Guard patrols of major seaports. The Department of Homeland Security is working closely with the nation's governors to increase armed security at critical
facilities
across America. Should enemies strike our country, they would be attempting to shift our attention with panic and weaken our morale
with
fear. In this, they would fail. No act of theirs can alter the course
or
shake the resolve of this country. We are a peaceful people--yet we're not a fragile people, and we will not be intimidated by thugs and killers. If our enemies dare to strike us, they and all who have aided them, will face fearful consequences."
The chances of the United States being attacked will be greatly increased if the U.S. attacks first. Indeed, if there was any logic behind the madness of 9/11, it was Osama bin Laden's hope that the United States would react in such a way that would only increase the popularity of anti-American extremists. History has shown that the
more
the United States has militarized the Middle East, the less secure we have become.

"We are now acting because the risks of inaction would be far greater. In one year, or five years, the power of Iraq to inflict harm on all free nations would be multiplied many times over. With these capabilities, Saddam Hussein and his terrorist allies could choose the moment of deadly conflict when they are strongest. We choose to meet that threat now, where it arises, before it can appear suddenly in our

skies and cities."
Iraq has never threatened to attack the United States nor does it have the ability to attack the United States. That country became a formidable military threat back in the 1980s as a result of support from
industrialized nations like the U.S., Great Britain, France, Germany, and Russia. With a strict military embargo imposed upon the country since 1990, it will be extremely difficult for Iraq to become a military
threat to the United States or any other country.

"The cause of peace requires all free nations to recognize new and undeniable realities. In the 20th century, some chose to appease murderous dictators, whose threats were allowed to grow into genocide and global war. In this century, when evil men plot chemical, biological
and nuclear terror, a policy of appeasement could bring destruction of a
kind never before seen on this earth."
The analogy with Hitler's Germany and other Axis powers is spurious. Germany was the most powerful industrialized country in the world in the
1930s. Iraq, by contrast, is a poor, third-world country that has had most of its military infrastructure destroyed and has been under the strictest military and economic sanctions in world history. The current
UN policy of inspections, sanctions, and the threat of UN-sanctioned war
if Iraq again threatens its neighbors can hardly be considered "appeasement." None of the Axis powers of the 1930s were ever subjected
to such international pressure until they had invaded and occupied dozens of nations in Europe, Asia, and Africa. Iraq has not invaded and
occupied any countries since its six-month occupation of Kuwait in 1990-
91.

"Terrorists and terror states do not reveal these threats with fair notice, in formal declarations--and responding to such enemies only after they have struck first is not self-defense, it is suicide. The security of the world requires disarming Saddam Hussein now."
Essentially, President Bush is saying that a country has the right to invade and occupy another country without any evidence that the targeted
country has the intention, willingness, or ability to strike first. This
would give virtually any country the right to invade any other. Most of
Iraq's neighbors do not consider Iraq to be a threat, either now or in the perceivable future.

"As we enforce the just demands of the world, we will also honor the deepest commitments of our country."
Violating the U.S. Constitution and international legal covenants to which the U.S. government is legally bound is, in reality, a dishonor to
the deepest commitments of the United States.

"Unlike Saddam Hussein, we believe the Iraqi people are deserving and capable of human liberty. And when the dictator has departed, they can set an example to all the Middle East of a vital and peaceful and self-
governing nation."
If the United States really believes the Iraqi people are deserving and
capable of human liberty, then why did the U.S. support Saddam Hussein during the height of his terror? And why are the leading candidates the
United States hopes to install in Baghdad to replace the current dictatorship lacking anything remotely resembling democratic credentials?

"The United States, with other countries, will work to advance liberty and peace in that region."
Then why does the United States support dictatorships in Egypt, Saudi Arabia, Oman, Kuwait, Pakistan, Uzbekistan, and other autocratic regimes? And why does the United States support Moroccan, Israeli, and Turkish occupation forces? Such policies belie any claim of support for
liberty and peace.

"Our goal will not be achieved overnight, but it can come over time. The
power and appeal of human liberty is felt in every life and every land.
And the greatest power of freedom is to overcome hatred and violence, and turn the creative gifts of men and women to the pursuits of peace."
To unleash bombs and missiles on cities, to engage in war-mongering, and
to lie to the American people and the world in order to rationalize such
an invasion is itself a form of hatred and violence.

"That is the future we choose. Free nations have a duty to defend our people by uniting against the violent. And tonight, as we have done before, America and our allies accept that responsibility. Good night, and may God continue to bless America."
And may God forgive President Bush and the congressional leaders of both
parties who are responsible for unleashing such horrific violence against the people of Iraq.

Nobody, you ignorant ass. "ONLY"? To use a quote from you,
> you are an idiot or a retard

> When someone is caught with a fake ID, who is usually
> responsible for having the fake ID produced?
> This is not rocket science here.

You're right. But talking about pond scum is way out of your league, too...

> No shit. Especially since there are no WMD in Iraq,
> or they would have used them by now.

By what piece of twisted logic do you come to THIS conclusion?

> If they were in Iraq, the US would find them after
> the war anyway, so might as well USE them on the
> US now. But you can't use what you were forced
> to destroy 12 years ago.

What a dolt. This doesn't even NEED a comment.

> It was the USA that gave them the weapons,
> and CALIBRATED them for Iraq to use on Iran.

THIS AGAIN? Don't you ever LEARN? here we go...

THE WAY THINGS REALLY WORK: Who Really Armed Saddam

March 20, 2003: SIPRI, a veteran Swedish disarmament group, compiles data on arms sales. Despite information published during the 1980s about where Iraq was getting its weapons from, the myth that Iraq was armed by the United States continues to survive. In fact, the major arms supplier for Iraq was the Soviet Union. And Iraq still owes the Russians over five billion dollars for arms delivered and not paid for. France and China are owed lesser amounts. Below are best estimates of the dollar amount of weapons sold to Iraq between 1973 and 1990.

Soviet Union- Over 25 billion dollars
France and China - at least five billion dollars each.
Czechoslovakia and Poland - about two billion dollars each
Brazil, Egypt and Romania - between $500 million and one billion dollars

each.
Denmark- Over $200 million.

Since 1990, there has been an arms embargo on Iraq. But weapons, and spare parts, are still smuggled in. Many of these appear to have come from Eastern Europe, and France.

March 16, 2003: The U.S. Marines brought some fifty chickens with them to Kuwait. The birds, which are easy to care for, but sensitive to chemical weapons, were thought to be perfect as live chemical attack monitors. If the bird drops, the thinking went, it's a chemical attack. But within days of arriving in Kuwait, most of the birds died anyway. A few marines figured out what was happening and saved the rest. It seems that chickens spend most of their time pecking at the ground for stray bits of food. But these American chickens had never been in the desert before and their encounter with the Kuwaiti sand led to them gobbling up enough of the sand to kill them. Birds are not very bright. So the surviving birds were saved by keeping them off the sand. With most of their two footed "chemical attack detectors" gone, the marines looked around for a replacement. And found one, a critter nearly as clueless (at least in a combat zone) as chickens. It seems that many, if not most, of the hundreds of journalists assigned to combat units can't be bothered with carrying around their chemical warfare equipment. So many reporters plan to use the journalists (at least the ones who refuse to take their chemical protection gear with them) as chicken replacements. On a more practical level, the marines are bringing in several hundred homing pigeons for chemical attack detection duty. The pigeons are smaller, easier to take care of and are known to survive quite well in the Persian Gulf area.

February 20, 2003: With war in Iraq looming, experts are showing up everywhere telling us how many people are going to be killed. What makes this interesting is that there is still no agreement on how many were killed in the 1991 war. The higher estimates (up to 100,000 Iraqi dead) were pure guesses made at the end of the fighting. When the battlefield, and Iraqi cities, were examined, it was found that the number of Iraqi military dead was probably less than 5,000 (remember all those Iraqis trying to surrender, very few actually fought, and when they did, the majority surrendered after some of their buddies were killed.) Civilian deaths were probably less than 1,000. Even anti-American advocacy groups that visited Iraq after the war were surprised at how precise the US bombing was, and how few civilians casualties resulted. But a lot of experts estimating deaths from the war like to add deaths from the Shia/Kurdish rebellion right after the war, and the food and medicine shortages of the 1990s. In these cases, the deaths were probably in the hundreds of thousands. But what is missed here is these deaths were caused by Iraqis killing other Iraqis. The rebellions right after the war were not the first by the Shias or Kurds. Both groups had rebelled against the Sunni minority many times in the previous decades (and centuries, for that matter.) The deaths from starvation and lack of medicine were deliberate moves by Saddam to suppress rebellious attitudes among Iraqis who didn't like him. Noting the pattern of deaths in the 1991 war, Saddam is openly stationing troops and weapons in residential neighborhoods of non-Sunni Iraqis. How that will play out in the next war is hard to say.

U.S. psychological warfare messages sent into Iraq over the last few months has made it clear that any officers hiding their troops among civilians will be held personally responsible if there are dead Iraqi civilians as a result. This could cause some strange military maneuvers when the fighting starts. The US is determined to limit civilian casualties in any new Iraq war, and has more precise weapons to achieve that goal. So it's a contest between Saddam trying to use Iraqi civilians as shields for his troops, and the US trying to avoid killing civilians.

February 14, 2003: A Maginot Line of Inspectors- There are many theories to explain the French position on Iraq. Some believe France is trying to retain its access to Iraqi oil. Others believe France is trying to hide its involvement in supplying Saddam's nuclear, biological, and chemical weapons. There are even reports of cash bribes to President Chirac from Baghdad. Many are simply ascribed to based on how low an observer's opinions are of the French. If this is not part of a duplicitous plot, what could the French be thinking?

The French have proven time and again throughout the 20th Century that their tactical and strategic vision is woefully outdated. During World War I, the French annihilated a generation of their own youth by relying on human wave attacks against machine-guns and modern artillery. Following the war, France used the peace process to so cripple Germany's economy that the nation was ripe for Hitler's hate mongering. The French insisted on carving up old empires and creating new countries that have lead to many of today's problems in the Balkans and the Middle-East.

Prior to World War II the French constructed massive concrete fortifications known as the Maginot Line to stop the Germans. The Germans simply drove around the Maginot Line and conquered France in only six weeks. France also had the largest and most modern army in the world; but its outdated tactics could not withstand the German blitzkrieg.

The democratic allies defeated imperialism in Italy, Germany, and Japan. The French response to their liberation was to enlist Nazi Prisoners of War into the Foreign Legion and dispatch them to enslave a new French Empire in Africa and Asia. This convinced many in the Third-World that the West intended to keep democracy and freedom for itself. In 1956 the French convinced Britain and Israel to join in its unilateral invasion of Egypt. This invasion was launched to embarrass President Nasser of Egypt for supporting Muslim rebels in the French colony Algeria. The only time in UN history that France used its Security Council veto power was to foil a UN resolution to stop their invasion of Egypt. The French unilateral wars against Algeria and Egypt are one of the primary causes of Arab distrust of the West.

Now the country that blundered its way through the 20th Century wants to decide how to deal with the Iraq crisis. They believe that inspectors and sanctions will contain Iraq's Weapons of Mass Destruction (WMD)program. They are trying to build a Maginot Line of UN Inspectors to protect themselves from WMD attacks. While this line of defenses, like the last one, may look impressively strong; Saddam has simply mounted his production on trucks and

is driving them around the new Maginot Line.

Once again France's strategic thinking is decades out of date. In the past WMD production and research required huge industrial complexes. Today's facilities are truck mounted and can be hidden in a million places the inspectors will never look. In the first seven years of inspections the UN found documents to verify that Iraq may have produced ten billion lethal doses of biological toxins. The Iraqis have been able to hide these huge stockpiles from inspectors for twelve years.

In previous wars it took large artillery bombardments to make chemical weapons effective. Today the weapons are more potent and terrorists provide an effective delivery system. Al Qaeda has been caught with plans to add chemical weapons into building ventilation systems. We could assign a UN Inspector to guard every air conditioner in the free world; but would they have the will to stop the slaughter, or would they stand aside and watch the massacre like UN Peacekeepers did at UN Safe Havens in Bosnia.

During their 12 years of inspections the UN has proved Saddam had 36,000 WMD delivery systems he will not account for. The new round of inspections have found 18 of these weapons, with continued inspections they are on pace to find all of Saddam's weapons by September the 11th, of the year 2301. Only a fool or a Frenchman could believe we could contain the weapons for that long.

The French still don't realize that nations no longer need fleets of inspectable bombers and intercontinental missiles to attack their enemies. For the cost of 19 plane tickets the world's only superpower was brought to its knees. Now what if those 19 attackers had WMD, how much damage could they do? A Defense Department analyst found that one plane spraying 440 pounds of anthrax over Manhattan would kill 1,000,000 people. Zacarias Moussaoui had the research on his laptop and Mohamed Atta tried to buy the cropduster. Why would Atta try to buy the cropduster unless he had access to WMD? The Czech Republic still affirms that Mohamed Atta met with an Iraqi intelligence chief in early 2001. The Czechs expelled this "diplomat" BEFORE 9-11-01 for providing assistance to terrorists who were planning to attack American and Jewish targets. An intelligence agent, from a hostile nation that is hiding WMD, was assisting Islamic terrorists and met with a suicide bomber who was trying to buy a crop duster to spray WMD. These actions occurred two years ago; yet the French don't believe their ally Saddam and his alliance with terrorists is an "imminent" threat.

The French have proven they have no interest in containment. They have signed agreements with Saddam to develop Iraqi oil fields when UN sanctions are lifted. Even though the inspectors have proven that Saddam is still hiding WMD; the French have tried on several occasion to have the inspections and sanctions lifted. Hans Blix has stated that he will submit a plan in March to end inspections and lift the sanctions; ending the containment the French and their apologists say will work.

The Maginot Line did not protect France from Germany. It only forced Germany to invade three other countries to get around it. The Maginot Line of

Inspectors has failed to stop Saddam for twelve years, and their current pace requires 300 more years. The only question is which countries will be attacked with Iraq's Weapons of Mass Destruction, while they drive around this new Maginot Line to France. Recent terror alerts suggest Al Qaeda is planning to used WMD. Police throughout the world are on the look out for terrorists using light bulbs and fire extinguishers to spread deadly toxins. It's beginning to look like the Maginot Line has already been breached.

> Do a search and look for that picture of Rumsfeld
> shaking hands with Saddam in 1883.

You really enjoy twisting whatever you can to fit your needs. Alliances change. Look at the pictures of FDR shaking hands with Josef Stalin. Idiot. Then again, you think that those twisted feces-for-brains that steal images from a Kurdish website and attribute the atrocities to the United States is "truth" as well.

Well, technically, no. But All you have to do is look around a bit. They're
not SUPPOSED to sell them, but until they get reported, many do...
Ask around a bit. And mods are readily available, on the 'net and other
places.
(but *I* never said that...)

A War Crime or an Act of War?
By STEPHEN C. PELLETIERE

MECHANICSBURG, Pa. - It was no surprise that President Bush, lacking smoking-gun evidence of
Iraq's weapons programs, used his State of the Union address to re-emphasize the moral case for
an invasion: "The dictator who is assembling the world's most dangerous weapons has already
used them on whole villages, leaving thousands of his own citizens dead, blind or disfigured."
The accusation that Iraq has used chemical weapons against its citizens is a familiar part of
the debate. The piece of hard evidence most frequently brought up concerns the gassing of Iraqi
Kurds at the town of Halabja in March 1988, near the end of the eight-year Iran-Iraq war.
President Bush himself has cited Iraq's "gassing its own people," specifically at Halabja, as a
reason to topple Saddam Hussein.
But the truth is, all we know for certain is that Kurds were bombarded with poison gas that day
at Halabja. We cannot say with any certainty that Iraqi chemical weapons killed the Kurds. This
is not the only distortion in the Halabja story.
I am in a position to know because, as the Central Intelligence Agency's senior political
analyst on Iraq during the Iran-Iraq war, and as a professor at the Army War College from 1988
to 2000, I was privy to much of the classified material that flowed through Washington having

to do with the Persian Gulf. In addition, I headed a 1991 Army investigation into how the
Iraqis would fight a war against the United States; the classified version of the report went
into great detail on the Halabja affair.
This much about the gassing at Halabja we undoubtedly know: it came about in the course of a
battle between Iraqis and Iranians. Iraq used chemical weapons to try to kill Iranians who had
seized the town, which is in northern Iraq not far from the Iranian border. The Kurdish
civilians who died had the misfortune to be caught up in that exchange. But they were not
Iraq's main target.
And the story gets murkier: immediately after the battle the United States Defense Intelligence
Agency investigated and produced a classified report, which it circulated within the
intelligence community on a need-to-know basis. That study asserted that it was Iranian gas
that killed the Kurds, not Iraqi gas.
The agency did find that each side used gas against the other in the battle around Halabja. The
condition of the dead Kurds' bodies, however, indicated they had been killed with a blood
agent - that is, a cyanide-based gas - which Iran was known to use. The Iraqis, who are thought
to have used mustard gas in the battle, are not known to have possessed blood agents at the
time.
These facts have long been in the public domain but, extraordinarily, as often as the Halabja
affair is cited, they are rarely mentioned. A much-discussed article in The New Yorker last
March did not make reference to the Defense Intelligence Agency report or consider that Iranian
gas might have killed the Kurds. On the rare occasions the report is brought up, there is
usually speculation, with no proof, that it was skewed out of American political favoritism
toward Iraq in its war against Iran.
I am not trying to rehabilitate the character of Saddam Hussein. He has much to answer for in
the area of human rights abuses. But accusing him of gassing his own people at Halabja as an
act of genocide is not correct, because as far as the information we have goes, all of the
cases where gas was used involved battles. These were tragedies of war. There may be
justifications for invading Iraq, but Halabja is not one of them.

In fact, those who really feel that the disaster at Halabja has bearing on today might want to consider a different question: Why was Iran so keen on taking the town? A closer look may shed light on America's impetus to invade Iraq.

We are constantly reminded that Iraq has perhaps the world's largest reserves of oil. But in a regional and perhaps even geopolitical sense, it may be more important that Iraq has the most extensive river system in the Middle East. In addition to the Tigris and Euphrates, there are the Greater Zab and Lesser Zab rivers in the north of the country. Iraq was covered with irrigation works by the sixth century A.D., and was a granary for the region.

Before the Persian Gulf war, Iraq had built an impressive system of dams and river control projects, the largest being the Darbandikhan dam in the Kurdish area. And it was this dam the Iranians were aiming to take control of when they seized Halabja. In the 1990's there was much discussion over the construction of a so-called Peace Pipeline that would bring the waters of the Tigris and Euphrates south to the parched Gulf states and, by extension, Israel. No progress has been made on this, largely because of Iraqi intransigence. With Iraq in American hands, of course, all that could change.

Thus America could alter the destiny of the Middle East in a way that probably could not be challenged for decades - not solely by controlling Iraq's oil, but by controlling its water.

Even if America didn't occupy the country, once Mr. Hussein's Baath Party is driven from power, many lucrative opportunities would open up for American companies.

All that is needed to get us into war is one clear reason for acting, one that would be generally persuasive. But efforts to link the Iraqis directly to Osama bin Laden have proved inconclusive. Assertions that Iraq threatens its neighbors have also failed to create much resolve; in its present debilitated condition - thanks to United Nations sanctions - Iraq's conventional forces threaten no one.

Perhaps the strongest argument left for taking us to war quickly is that Saddam Hussein has committed human rights atrocities against his people. And the most dramatic case are the accusations about Halabja.

Before we go to war over Halabja, the administration owes the American people the full facts.

And if it has other examples of Saddam Hussein gassing Kurds, it must show that they were not
pro-Iranian Kurdish guerrillas who died fighting alongside Iranian Revolutionary Guards. Until
Washington gives us proof of Saddam Hussein's supposed atrocities, why are we picking on Iraq
on human rights grounds, particularly when there are so many other repressive regimes
Washington supports?
Stephen C. Pelletiere is author of "Iraq and the International Oil System: Why America Went to
War in the Persian Gulf."

Responding to Bush's speech line by line, lie by lie

An Annotated Critique of President George W. Bush's March 17 Address Preparing the Nation for War

FPIF Middle Eastern Editor, Stephen Zunes, provides an annotated critique of the president's address to the nation about imminent war against Iraq. Given that the Democratic Party leadership in Congress declined to take their traditional opportuntity to offer a formal response, FPIF provides a response to all the president's arguments for
war. Line by line, argument by argument, falsehood by falsehood, Zunes responds to the president.

Stephen Zunes is an associate professor of politics and chair of the Peace & Justice Studies Program at the University of San Francisco.

(Editors' Note: Below is a transcript of President George W. Bush's address to the nation on Monday, March 17, announcing his readiness to order a U.S. invasion of Iraq followed by an analysis highlighting some
of the lies and misleading statements in the speech. Such an overview is
necessary since the Democratic Party leadership in Congress, which has pledged to support the president in the event of war, declined to take their traditional opportunity to offer a formal response. The Green Party, which opposes the war, was not given the opportunity by the networks to respond.)

"My fellow citizens, events in Iraq have now reached the final days of decision. For more than a decade, the United States and other nations have pursued patient and honorable efforts to disarm the Iraqi regime without war."
This is patently false. In 1998, President Bill Clinton successfully pressured UNSCOM director Richard Butler to withdraw inspectors without
authorization from the Secretary General or the Security Council--before
their mission was complete--in order to engage in a four-day heavy

bombing campaign against Iraq. As predicted at the time, this illegal use of military force--combined with revelations that the United States had abused the inspections process for espionage purposes--resulted in the Iraqi government barring the inspectors' return until a reorganized inspections commission known as UNMOVIC commenced inspections last year. UNMOVIC chairman Hans Blix and UN Secretary General Kofi Annan explicitly called upon the United States and the international community to give the inspectors more time to do their job, noting that it would take a number of months before their mission could be completed.

"That regime pledged to reveal and destroy all its weapons of mass destruction as a condition for ending the Persian Gulf War in 1991." Iraq was presented with this demand as part of UN Security Council resolution 687, which mandated Iraqi disarmament of its weapons of mass destruction and related delivery systems. This was a unilateral decree from the Security Council which--while nominally part of the ceasefire agreement--was void of any explicit threat to continue prosecuting the war if Iraq did not agree to the disarmament provisions. It is noteworthy that the demand for Iraqi disarmament in the resolution was put forward within the context of a call for regional disarmament. The United States has refused to encourage any regional disarmament initiative, however, and remains a strong supporter of the Israeli and Pakistani governments, which have advanced nuclear arsenals among other weapons of mass destruction.

"Since then, the world has engaged in 12 years of diplomacy. We have passed more than a dozen resolutions in the United Nations Security Council. We have sent hundreds of weapons inspectors to oversee the disarmament of Iraq. Our good faith has not been returned. The Iraqi regime has used diplomacy as a ploy to gain time and advantage. It has uniformly defied Security Council resolutions demanding full disarmament." Iraq's cooperation has indeed been less than total, but most independent reports--even during UNSCOM's inspections regime between 1991 and 1998--conclude that cooperation was close to 90%. According to UNMOVIC, Iraq's cooperation since inspections resumed last year has been far better.

"Over the years, UN weapon inspectors have been threatened by Iraqi officials, electronically bugged, and systematically deceived." This was not an uncommon practice during the UNSCOM era, but there have been no reports from UNMOVIC of such harassment subsequently.

"Peaceful efforts to disarm the Iraqi regime have failed again and again--because we are not dealing with peaceful men."
Peaceful efforts at disarming Iraq have succeeded in eliminating somewhere between 95% and 100% of Iraq's weapons of mass destruction and
related materiel and delivery systems as a result of UN Security Council
resolution 687 and subsequent resolutions. The determination to go to war despite such success raises serious questions as to whether the United States is governed by peaceful men.

"Intelligence gathered by this and other governments leaves no doubt that the Iraq regime continues to possess and conceal some of the most lethal weapons ever devised."
If the United States really has evidence that the Iraqi government continues to possess and conceal weapons of mass destruction, why has the Bush administration refused to make such evidence public or pass such intelligence on to United Nations inspectors, who have the authority to destroy them?

"This regime has already used weapons of mass destruction against Iraq's
neighbors and against Iraq's people."
Iraq did use chemical weapons against Iranian troops and Kurdish civilians back in the 1980s when Saddam Hussein's regime was being supported by the United States. The Reagan administration covered up for
the Halabja massacre and similar attacks against Kurdish civilians by falsely claiming that it was the Iranians--then the preferred enemy--who
were responsible. In addition, the U.S. Defense Intelligence Agency provided Iraq with U.S. satellite data to help Saddam Hussein's forces locate Iranian troop concentrations in the full knowledge that they were
using chemical weapons. Many of the key components of Iraq's chemical weapons program came from the United States, ostensibly for pesticides as part of taxpayer-funded agricultural subsidies, despite evidence that
these U.S.-manufactured chemicals were probably being diverted for use in illegal chemical weapons.

"The regime has a history of reckless aggression in the Middle East."
This is true, though Iraq's invasion of Iran in 1980 was quietly supported by the U.S. government and ambivalent signals by the U.S. ambassador to Iraq immediately prior to the Iraqi invasion of Kuwait may
have emboldened Saddam Hussein to conquer the sheikdom in 1990. Now, with Iraq's offensive military capability just a fraction of what is was
during that period and an unambiguous resolve by the international community to thwart such future aggression, there is little chance of Iraq invading another country again.

"It has a deep hatred of America and our friends."
Iraq willingly accepted U.S. support during the 1980s. The more belligerent posture of recent years is largely a result of the U.S. destruction of much of the country's military and civilian infrastructure in the 1991 Gulf War, which was supported by a number of other Middle Eastern states with which Iraq had also once collaborated and been on friendly terms. Subsequent U.S.-led sanctions, periodic bombing raids, and invasion threats have resulted in widespread suffering of the population that has intensified anti-American sentiment. Had the United States adopted a more enlightened policy, such deep hatred would likely have not developed.

"And it has aided, trained, and harbored terrorists, including operatives of al Qaeda."
Every independent investigation of every Bush administration claim of a connection between the secular Iraqi government and the Islamist al Qaeda network has found no evidence of any Iraqi aid, training, or harboring of al Qaeda terrorists. According to both published U.S. government reports and independent analyses, Iraq's support for international terrorism--which has always been restricted to secular nationalists like the radical Palestinian Abu Nidal faction--peaked in the 1980s.

"The danger is clear: using chemical, biological or, one day, nuclear weapons, obtained with the help of Iraq, the terrorists could fulfill their stated ambitions and kill thousands or hundreds of thousands of innocent people in our country, or any other. The United States and other nations did nothing to deserve or invite this threat. But we will do everything to defeat it. Instead of drifting along toward tragedy, we will set a course toward safety. Before the day of horror can come, before it is too late to act, this danger will be removed."
The Bush administration has failed to present any evidence that Iraq has the intention to pass on weapons of mass destruction to terrorists, an act that would inevitably lead to a U.S.-led invasion, only in this case with the support of the international community. This is the essence of deterrence, which protected the United States and its allies from Josef Stalin, Mao Zedung, and other leaders as tyrannical and far more powerful militarily than Saddam Hussein. And no country has the right to invade another on some far-fetched scenario that they might do something someday. Ironically, as the CIA has noted in a report released this past

October, Saddam Hussein would not likely use WMDs as a first strike, but
in the case of a U.S. invasion--with nothing to lose and the logic of
deterrence no longer in effect--would be far more likely to use whatever
WMDs he may possess. In other words, a U.S. invasion, rather than
preventing the use of weapons of mass destruction, would be the most
likely--and the only realistic--scenario that such horrible weapons
would be utilized.

"The United States of America has the sovereign authority to use force
in assuring its own national security. That duty falls to me, as
Commander-in-Chief, by the oath I have sworn, by the oath I will keep."
The oath of office also demands that the president uphold and defend the
Constitution of the United States, which forbids such an illegal use of
force. Virtually no international legal authority recognizes such an
invasion as an act of assuring legitimate national security interests.

"Recognizing the threat to our country, the United States Congress voted
overwhelmingly last year to support the use of force against Iraq."
The U.S. Congress--with the support of both the Republican and
Democratic leadership--did authorize the use of force against Iraq.
However, the resolution violates Article I, Section 8 of the U.S.
Constitution which does not allow Congress to grant such open-ended
warmaking authority to the president for an offensive military action.
Only a formal declaration of war in such a situation can be considered
legitimate. Furthermore, Article VI of the Constitution declares that
international treaties to which the United States is a party are to be
treated as supreme law, thereby proscribing Congress from passing any
resolution that violates the UN Charter, such as supporting an invasion
of a sovereign nation. As a result, this resolution is unconstitutional
and thereby invalid.

"America tried to work with the United Nations to address this threat
because we wanted to resolve the issue peacefully. We believe in the
mission of the United Nations."
Then why is the United States violating the UN Charter, which forbids
the use of military force unless a country finds itself under armed
attack or it is explicitly authorized by the UN Security Council? The
mission of the United Nations is to preserve international peace and
security, not to approve the invasion of one country by another.

"One reason the UN was founded after the Second World War was to
confront aggressive dictators, actively and early, before they can
attack the innocent and destroy the peace."

The United States refused to confront Saddam Hussein active and early when he was committing acts of aggression against Iranians and Kurds and opposed decisive action by the United Nations. Iraq's ability to attack the innocent and destroy the peace has already been reduced dramatically through a series of actions by the United Nations, including authorizing the use of force to remove Iraqi occupation forces from Kuwait, placing strict military sanctions against the dictatorship, and overseeing the most aggressive unilateral disarmament effort and inspections regime in history.

"In the case of Iraq, the Security Council did act, in the early 1990s. Under Resolutions 678 and 687--both still in effect--the United States and our allies are authorized to use force in ridding Iraq of weapons of mass destruction. This is not a question of authority, it is a question of will."

The assertion that resolutions 678 and 687 give the United States the right to invade Iraq is patently false. Resolution 678 authorized the use of force to enforce prior UN Security Council resolutions demanding that Iraq remove its occupation forces from Kuwait. Once that was accomplished in late February 1991, the resolution became moot. Resolution 687 called for Iraqi disarmament of weapons of mass destruction and related delivery systems, but--even though it was the most detailed resolution in the history of the United Nations--no enforcement mechanism was specified. According to United Nations Charter, such resolutions can be enforced militarily only if the Security Council as a whole recognizes that a country is in material breach, determines that all non-military means have been exhausted, and specifically authorizes the use of force. The Security Council has not done so subsequent to the passage of resolution 678 in late November 1990.

"Last September, I went to the UN General Assembly and urged the nations of the world to unite and bring an end to this danger. On November 8th, the Security Council unanimously passed Resolution 1441, finding Iraq in material breach of its obligations, and vowing serious consequences if Iraq did not fully and immediately disarm."

True, but it did not authorize the use of force. Article 14 of that

resolution specifically noted that the Security Council would "remain seized of the matter," reiterating that only the Security Council as a whole--not any one member state--has the power to determine whether military force can be legitimately utilized to enforce its resolution.

"Today, no nation can possibly claim that Iraq has disarmed."
There actually are some nations that believe that Iraq has disarmed under the resolutions. Though this is not likely the case, the Bush administration has been unable to present clear evidence to the contrary.

"And it will not disarm so long as Saddam Hussein holds power."
This is sheer speculation. As a dictator who has proven his desire to ruthlessly hold on to power at all costs, he very well could disarm to save his regime. However, the Bush administration has made clear its intention to invade anyway, thereby providing little incentive for Saddam Hussein to do so.

"For the last four-and-a-half months, the United States and our allies have worked within the Security Council to enforce that Council's long-
standing demands. Yet, some permanent members of the Security Council have publicly announced they will veto any resolution that compels the disarmament of Iraq. These governments share our assessment of the danger, but not our resolve to meet it."
Actually, most Security Council members do not believe that Iraq is the
imminent threat that the United States claims it to be, though, if convincing evidence were presented that Iraq indeed posed a threat to international peace and security, a clear majority of the Security Council--including France--have indicated their willingness to authorize
the use of force. A veto of the proposed U.S.-sponsored resolution by France, Russia, and China would probably not have been necessary since the United States was unable--despite enormous pressure, including promises of increased foreign aid, trade preferences, and other incentives--to convince a simple majority of nations on the Council that
it was necessary to take the unprecedented step of authorizing the United States to invade Iraq, overthrow the government, and replace it with one more to its liking.

"Many nations, however, do have the resolve and fortitude to act against
this threat to peace, and a broad coalition is now gathering to enforce
the just demands of the world."
There is nothing close to the broad coalition such as that which joined
the United States in ridding Iraqi occupation forces from Kuwait in 1991, when Iraq clearly did constitute a threat to peace. As of this

writing, only one major power (Great Britain) and two minor powers (Spain and Australia) have offered to send troops. All three of these governments are doing so contrary to the sentiments of the vast majority
of their population and their combined participation still leaves the United States contributing at least 85% of combat forces. As columnist Maureen Dowd noted, since the Bush administration has driven virtually everyone from the schoolyard, it now has to rely on imaginary friends.

"The United Nations Security Council has not lived up to its responsibilities, so we will rise to ours."
In reality, the United Nations Security Council has gone to extraordinary efforts to minimize any threat to peace from Iraq, including authorizing the use of force in 1990 to enforce resolutions requiring an Iraqi withdrawal from occupied Kuwait, the imposition of strict sanctions against Iraq, and the creation of an inspections regime
that has been largely--if not 100%--effective. By contrast, it is not the responsibility of the United States or any country to invade a sovereign nation when it feels like it.

"In recent days, some governments in the Middle East have been doing their part. They have delivered public and private messages urging the dictator to leave Iraq, so that disarmament can proceed peacefully. He has thus far refused. All the decades of deceit and cruelty have now reached an end. Saddam Hussein and his sons must leave Iraq within 48 hours. Their refusal to do so will result in military conflict, commenced at a time of our choosing. For their own safety, all foreign nationals--including journalists and inspectors--should leave Iraq immediately."
President Bush has no authorization to demand that United Nations inspectors or foreign nationals leave Iraq. Nor does he have the right to demand that Saddam Hussein and his sons leave their country. No Security Council resolutions require that Saddam Hussein resign or that
he and any other member of his family go into exile. And neither the United States nor any other country has the right to commence an invasion of another country at the time of its choosing.

"Many Iraqis can hear me tonight in a translated radio broadcast, and I
have a message for them. If we must begin a military campaign, it will be directed against the lawless men who rule your country and not against you."
It is highly likely that a major U.S. military campaign--particularly one with such a heavy reliance on air power and the determination to seize by force a capital city of over five million people--will result in the deaths of thousands of innocent Iraqi civilians.

"As our coalition takes away their power, we will deliver the food and medicine you need."

In large part as a result of the U.S.-led sanctions, there are already severe shortages of food and medicines in Iraq. Strict and mostly equitable rationing have left few Iraqi families with more than a couple
of days' worth of food in storage. It is unlikely that the United States
will be able to supply most Iraqis with the food and medicine they need
in any timely manner.

"We will tear down the apparatus of terror and we will help you to build
a new Iraq that is prosperous and free. In a free Iraq, there will be no
more wars of aggression against your neighbors, no more poison factories, no more executions of dissidents, no more torture chambers and rape rooms."
The fact that the United States has supported scores of regimes--including a number in the Middle East--that have tortured, raped, and murdered dissidents raises serious questions as to whether the Bush administration really supports a free Iraq. The Bush administration's ongoing support of Moroccan occupation forces in Western Sahara, Turkish
occupation forces in northern Cyprus, and Israeli occupation forces in the West Bank, the Gaza Strip, and the Golan Heights raises serious questions as to whether the United States is actually bothered by countries that commit acts of aggression against neighbors. The United States also supports a number of Middle Eastern countries that are believed to have developed chemical weapons, similarly raising questions
as to whether the Bush administration is really worried about "poison factories."

"The tyrant will soon be gone. The day of your liberation is near."
Most Iraqis would certainly welcome the end of Saddam Hussein's regime.
But it is highly questionable whether a Western nation that has already
wrought enormous suffering for the Iraqi people, invades the country, and installs one of its own generals as a provisional military governor
will be seen as an act of liberation or a foreign occupation.

"It is too late for Saddam Hussein to remain in power. It is not too late for the Iraqi military to act with honor and protect your country by permitting the peaceful entry of coalition forces to eliminate weapons of mass destruction."
First, it is hard to imagine any national army--even under the most ruthless of dictators--that would not resist a foreign invasion. Second,
if the United States knows where these alleged weapons of mass

destruction are located, why haven't U.S. government officials informed
UNMOVIC inspectors, who have the authority to destroy them?

"Our forces will give Iraqi military units clear instructions on actions
they can take to avoid being attacked and destroyed. I urge every member
of the Iraqi military and intelligence services, if war comes, do not
fight for a dying regime that is not worth your own life. And all Iraqi
military and civilian personnel should listen carefully to this warning.
In any conflict, your fate will depend on your action. Do not destroy
oil wells, a source of wealth that belongs to the Iraqi people. Do not
obey any command to use weapons of mass destruction against anyone,
including the Iraqi people. War crimes will be prosecuted. War criminals
will be punished. And it will be no defense to say, "I was just
following orders"."
The United States has actively undermined and refused to participate in
the International Criminal Court, which was designed to try and punish
war criminals like Saddam Hussein. As a result, any such trials will
likely be under the tutelage of an occupying American army, which will
be seen by the vast majority of the international community as
illegitimate. For a foreign occupation army to try and punish leaders of
an internationally recognized government--however reprehensible they may
be--is in itself a war crime and would make these thugs martyrs in the
eyes of much of the world.

"Should Saddam Hussein choose confrontation, the American people can
know that every measure has been taken to avoid war, and every measure
will be taken to win it."
Refusing an illegitimate order by a foreign government to surrender
power is not choosing confrontation. And, clearly, the Bush
administration has not taken "every measure to avoid war."

"Americans understand the costs of conflict because we have paid them in
the past. War has no certainty, except the certainty of sacrifice. Yet,
the only way to reduce the harm and duration of war is to apply the full
force and might of our military, and we are prepared to do so. If Saddam
Hussein attempts to cling to power, he will remain a deadly foe until
the end. In desperation, he and terrorists groups might try to conduct
terrorist operations against the American people and our friends.

These
attacks are not inevitable. They are, however, possible."
Then why prosecute and unnecessary and illegal war?

"And this very fact underscores the reason we cannot live under the threat of blackmail. The terrorist threat to America and the world will
be diminished the moment that Saddam Hussein is disarmed."
According to the CIA and other estimates, Iraq has not engaged in any anti-American terrorism since the alleged 1993 assassination attempt against former President George Bush and has already dramatically reduced his support for international terrorism since the 1980s, when the United States was supporting his government. By contrast, most intelligence analyses predict an increase in the terrorist threat to America and its allies should the United States invade Iraq.

"Our government is on heightened watch against these dangers. Just as we
are preparing to ensure victory in Iraq, we are taking further actions to protect our homeland. In recent days, American authorities have expelled from the country certain individuals with ties to Iraqi intelligence services. Among other measures, I have directed additional
security of our airports, and increased Coast Guard patrols of major seaports. The Department of Homeland Security is working closely with the nation's governors to increase armed security at critical facilities
across America. Should enemies strike our country, they would be attempting to shift our attention with panic and weaken our morale with
fear. In this, they would fail. No act of theirs can alter the course or
shake the resolve of this country. We are a peaceful people--yet we're not a fragile people, and we will not be intimidated by thugs and killers. If our enemies dare to strike us, they and all who have aided them, will face fearful consequences."
The chances of the United States being attacked will be greatly increased if the U.S. attacks first. Indeed, if there was any logic behind the madness of 9/11, it was Osama bin Laden's hope that the United States would react in such a way that would only increase the popularity of anti-American extremists. History has shown that the more
the United States has militarized the Middle East, the less secure we have become.

"We are now acting because the risks of inaction would be far greater. In one year, or five years, the power of Iraq to inflict harm on all free nations would be multiplied many times over. With these capabilities, Saddam Hussein and his terrorist allies could choose the moment of deadly conflict when they are strongest. We choose to meet that threat now, where it arises, before it can appear suddenly in our

skies and cities."
Iraq has never threatened to attack the United States nor does it have the ability to attack the United States. That country became a formidable military threat back in the 1980s as a result of support from
industrialized nations like the U.S., Great Britain, France, Germany, and Russia. With a strict military embargo imposed upon the country since 1990, it will be extremely difficult for Iraq to become a military
threat to the United States or any other country.

"The cause of peace requires all free nations to recognize new and undeniable realities. In the 20th century, some chose to appease murderous dictators, whose threats were allowed to grow into genocide and global war. In this century, when evil men plot chemical, biological
and nuclear terror, a policy of appeasement could bring destruction of a
kind never before seen on this earth."
The analogy with Hitler's Germany and other Axis powers is spurious. Germany was the most powerful industrialized country in the world in the
1930s. Iraq, by contrast, is a poor, third-world country that has had most of its military infrastructure destroyed and has been under the strictest military and economic sanctions in world history. The current
UN policy of inspections, sanctions, and the threat of UN-sanctioned war
if Iraq again threatens its neighbors can hardly be considered "appeasement." None of the Axis powers of the 1930s were ever subjected
to such international pressure until they had invaded and occupied dozens of nations in Europe, Asia, and Africa. Iraq has not invaded and
occupied any countries since its six-month occupation of Kuwait in 1990-
91.

"Terrorists and terror states do not reveal these threats with fair notice, in formal declarations--and responding to such enemies only after they have struck first is not self-defense, it is suicide. The security of the world requires disarming Saddam Hussein now."
Essentially, President Bush is saying that a country has the right to invade and occupy another country without any evidence that the targeted
country has the intention, willingness, or ability to strike first. This
would give virtually any country the right to invade any other. Most of
Iraq's neighbors do not consider Iraq to be a threat, either now or in the perceivable future.

"As we enforce the just demands of the world, we will also honor the deepest commitments of our country."
Violating the U.S. Constitution and international legal covenants to which the U.S. government is legally bound is, in reality, a dishonor to
the deepest commitments of the United States.

"Unlike Saddam Hussein, we believe the Iraqi people are deserving and capable of human liberty. And when the dictator has departed, they can set an example to all the Middle East of a vital and peaceful and self-
governing nation."
If the United States really believes the Iraqi people are deserving and
capable of human liberty, then why did the U.S. support Saddam Hussein during the height of his terror? And why are the leading candidates the
United States hopes to install in Baghdad to replace the current dictatorship lacking anything remotely resembling democratic credentials?

"The United States, with other countries, will work to advance liberty and peace in that region."
Then why does the United States support dictatorships in Egypt, Saudi Arabia, Oman, Kuwait, Pakistan, Uzbekistan, and other autocratic regimes? And why does the United States support Moroccan, Israeli, and Turkish occupation forces? Such policies belie any claim of support for
liberty and peace.

"Our goal will not be achieved overnight, but it can come over time. The
power and appeal of human liberty is felt in every life and every land.
And the greatest power of freedom is to overcome hatred and violence, and turn the creative gifts of men and women to the pursuits of peace."
To unleash bombs and missiles on cities, to engage in war-mongering, and
to lie to the American people and the world in order to rationalize such
an invasion is itself a form of hatred and violence.

"That is the future we choose. Free nations have a duty to defend our people by uniting against the violent. And tonight, as we have done before, America and our allies accept that responsibility. Good night, and may God continue to bless America."
And may God forgive President Bush and the congressional leaders of both
parties who are responsible for unleashing such horrific violence against the people of Iraq.

A War Crime or an Act of War?
By STEPHEN C. PELLETIERE

MECHANICSBURG, Pa. - It was no surprise that President Bush, lacking smoking-gun evidence of
Iraq's weapons programs, used his State of the Union address to re-emphasize the moral case for
an invasion: "The dictator who is assembling the world's most dangerous weapons has already
used them on whole villages, leaving thousands of his own citizens dead, blind or disfigured."
The accusation that Iraq has used chemical weapons against its citizens is a familiar part of
the debate. The piece of hard evidence most frequently brought up concerns the gassing of Iraqi
Kurds at the town of Halabja in March 1988, near the end of the eight-year Iran-Iraq war.
President Bush himself has cited Iraq's "gassing its own people," specifically at Halabja, as a
reason to topple Saddam Hussein.
But the truth is, all we know for certain is that Kurds were bombarded with poison gas that day
at Halabja. We cannot say with any certainty that Iraqi chemical weapons killed the Kurds. This
is not the only distortion in the Halabja story.
I am in a position to know because, as the Central Intelligence Agency's senior political
analyst on Iraq during the Iran-Iraq war, and as a professor at the Army War College from 1988
to 2000, I was privy to much of the classified material that flowed through Washington having

to do with the Persian Gulf. In addition, I headed a 1991 Army investigation into how the
Iraqis would fight a war against the United States; the classified version of the report went
into great detail on the Halabja affair.
This much about the gassing at Halabja we undoubtedly know: it came about in the course of a
battle between Iraqis and Iranians. Iraq used chemical weapons to try to kill Iranians who had
seized the town, which is in northern Iraq not far from the Iranian border. The Kurdish
civilians who died had the misfortune to be caught up in that exchange. But they were not
Iraq's main target.
And the story gets murkier: immediately after the battle the United States Defense Intelligence
Agency investigated and produced a classified report, which it circulated within the
intelligence community on a need-to-know basis. That study asserted that it was Iranian gas
that killed the Kurds, not Iraqi gas.
The agency did find that each side used gas against the other in the battle around Halabja. The
condition of the dead Kurds' bodies, however, indicated they had been killed with a blood
agent - that is, a cyanide-based gas - which Iran was known to use. The Iraqis, who are thought
to have used mustard gas in the battle, are not known to have possessed blood agents at the
time.
These facts have long been in the public domain but, extraordinarily, as often as the Halabja
affair is cited, they are rarely mentioned. A much-discussed article in The New Yorker last
March did not make reference to the Defense Intelligence Agency report or consider that Iranian
gas might have killed the Kurds. On the rare occasions the report is brought up, there is
usually speculation, with no proof, that it was skewed out of American political favoritism
toward Iraq in its war against Iran.
I am not trying to rehabilitate the character of Saddam Hussein. He has much to answer for in
the area of human rights abuses. But accusing him of gassing his own people at Halabja as an
act of genocide is not correct, because as far as the information we have goes, all of the
cases where gas was used involved battles. These were tragedies of war. There may be
justifications for invading Iraq, but Halabja is not one of them.

In fact, those who really feel that the disaster at Halabja has bearing on today might want to consider a different question: Why was Iran so keen on taking the town? A closer look may shed light on America's impetus to invade Iraq.

We are constantly reminded that Iraq has perhaps the world's largest reserves of oil. But in a regional and perhaps even geopolitical sense, it may be more important that Iraq has the most extensive river system in the Middle East. In addition to the Tigris and Euphrates, there are the Greater Zab and Lesser Zab rivers in the north of the country. Iraq was covered with irrigation works by the sixth century A.D., and was a granary for the region.

Before the Persian Gulf war, Iraq had built an impressive system of dams and river control projects, the largest being the Darbandikhan dam in the Kurdish area. And it was this dam the Iranians were aiming to take control of when they seized Halabja. In the 1990's there was much discussion over the construction of a so-called Peace Pipeline that would bring the waters of the Tigris and Euphrates south to the parched Gulf states and, by extension, Israel. No progress has been made on this, largely because of Iraqi intransigence. With Iraq in American hands, of course, all that could change.

Thus America could alter the destiny of the Middle East in a way that probably could not be challenged for decades - not solely by controlling Iraq's oil, but by controlling its water.

Even if America didn't occupy the country, once Mr. Hussein's Baath Party is driven from power, many lucrative opportunities would open up for American companies.

All that is needed to get us into war is one clear reason for acting, one that would be generally persuasive. But efforts to link the Iraqis directly to Osama bin Laden have proved inconclusive. Assertions that Iraq threatens its neighbors have also failed to create much resolve; in its present debilitated condition - thanks to United Nations sanctions - Iraq's conventional forces threaten no one.

Perhaps the strongest argument left for taking us to war quickly is that Saddam Hussein has committed human rights atrocities against his people. And the most dramatic case are the accusations about Halabja.

Before we go to war over Halabja, the administration owes the American people the full facts.

And if it has other examples of Saddam Hussein gassing Kurds, it must show that they were not
pro-Iranian Kurdish guerrillas who died fighting alongside Iranian Revolutionary Guards. Until
Washington gives us proof of Saddam Hussein's supposed atrocities, why are we picking on Iraq
on human rights grounds, particularly when there are so many other repressive regimes
Washington supports?
Stephen C. Pelletiere is author of "Iraq and the International Oil System: Why America Went to
War in the Persian Gulf."

Responding to Bush's speech line by line, lie by lie

An Annotated Critique of President George W. Bush's March 17 Address Preparing the Nation for War

FPIF Middle Eastern Editor, Stephen Zunes, provides an annotated critique of the president's address to the nation about imminent war against Iraq. Given that the Democratic Party leadership in Congress declined to take their traditional opportuntity to offer a formal response, FPIF provides a response to all the president's arguments for
war. Line by line, argument by argument, falsehood by falsehood, Zunes responds to the president.

Stephen Zunes is an associate professor of politics and chair of the Peace & Justice Studies Program at the University of San Francisco.

(Editors' Note: Below is a transcript of President George W. Bush's address to the nation on Monday, March 17, announcing his readiness to order a U.S. invasion of Iraq followed by an analysis highlighting some
of the lies and misleading statements in the speech. Such an overview is
necessary since the Democratic Party leadership in Congress, which has pledged to support the president in the event of war, declined to take their traditional opportunity to offer a formal response. The Green Party, which opposes the war, was not given the opportunity by the networks to respond.)

"My fellow citizens, events in Iraq have now reached the final days of decision. For more than a decade, the United States and other nations have pursued patient and honorable efforts to disarm the Iraqi regime without war."
This is patently false. In 1998, President Bill Clinton successfully pressured UNSCOM director Richard Butler to withdraw inspectors without
authorization from the Secretary General or the Security Council--before
their mission was complete--in order to engage in a four-day heavy

bombing campaign against Iraq. As predicted at the time, this illegal use of military force--combined with revelations that the United States had abused the inspections process for espionage purposes--resulted in the Iraqi government barring the inspectors' return until a reorganized inspections commission known as UNMOVIC commenced inspections last year. UNMOVIC chairman Hans Blix and UN Secretary General Kofi Annan explicitly called upon the United States and the international community to give the inspectors more time to do their job, noting that it would take a number of months before their mission could be completed.

"That regime pledged to reveal and destroy all its weapons of mass destruction as a condition for ending the Persian Gulf War in 1991." Iraq was presented with this demand as part of UN Security Council resolution 687, which mandated Iraqi disarmament of its weapons of mass destruction and related delivery systems. This was a unilateral decree from the Security Council which--while nominally part of the ceasefire agreement--was void of any explicit threat to continue prosecuting the war if Iraq did not agree to the disarmament provisions. It is noteworthy that the demand for Iraqi disarmament in the resolution was put forward within the context of a call for regional disarmament. The United States has refused to encourage any regional disarmament initiative, however, and remains a strong supporter of the Israeli and Pakistani governments, which have advanced nuclear arsenals among other weapons of mass destruction.

"Since then, the world has engaged in 12 years of diplomacy. We have passed more than a dozen resolutions in the United Nations Security Council. We have sent hundreds of weapons inspectors to oversee the disarmament of Iraq. Our good faith has not been returned. The Iraqi regime has used diplomacy as a ploy to gain time and advantage. It has uniformly defied Security Council resolutions demanding full disarmament." Iraq's cooperation has indeed been less than total, but most independent reports--even during UNSCOM's inspections regime between 1991 and 1998--conclude that cooperation was close to 90%. According to UNMOVIC, Iraq's cooperation since inspections resumed last year has been far better.

"Over the years, UN weapon inspectors have been threatened by Iraqi officials, electronically bugged, and systematically deceived." This was not an uncommon practice during the UNSCOM era, but there have been no reports from UNMOVIC of such harassment subsequently.

"Peaceful efforts to disarm the Iraqi regime have failed again and again--because we are not dealing with peaceful men."
Peaceful efforts at disarming Iraq have succeeded in eliminating somewhere between 95% and 100% of Iraq's weapons of mass destruction and
related materiel and delivery systems as a result of UN Security Council
resolution 687 and subsequent resolutions. The determination to go to war despite such success raises serious questions as to whether the United States is governed by peaceful men.

"Intelligence gathered by this and other governments leaves no doubt that the Iraq regime continues to possess and conceal some of the most lethal weapons ever devised."
If the United States really has evidence that the Iraqi government continues to possess and conceal weapons of mass destruction, why has the Bush administration refused to make such evidence public or pass such intelligence on to United Nations inspectors, who have the authority to destroy them?

"This regime has already used weapons of mass destruction against Iraq's
neighbors and against Iraq's people."
Iraq did use chemical weapons against Iranian troops and Kurdish civilians back in the 1980s when Saddam Hussein's regime was being supported by the United States. The Reagan administration covered up for
the Halabja massacre and similar attacks against Kurdish civilians by falsely claiming that it was the Iranians--then the preferred enemy--who
were responsible. In addition, the U.S. Defense Intelligence Agency provided Iraq with U.S. satellite data to help Saddam Hussein's forces locate Iranian troop concentrations in the full knowledge that they were
using chemical weapons. Many of the key components of Iraq's chemical weapons program came from the United States, ostensibly for pesticides as part of taxpayer-funded agricultural subsidies, despite evidence that
these U.S.-manufactured chemicals were probably being diverted for use in illegal chemical weapons.

"The regime has a history of reckless aggression in the Middle East."
This is true, though Iraq's invasion of Iran in 1980 was quietly supported by the U.S. government and ambivalent signals by the U.S. ambassador to Iraq immediately prior to the Iraqi invasion of Kuwait may
have emboldened Saddam Hussein to conquer the sheikdom in 1990. Now, with Iraq's offensive military capability just a fraction of what is was
during that period and an unambiguous resolve by the international community to thwart such future aggression, there is little chance of Iraq invading another country again.

"It has a deep hatred of America and our friends."
Iraq willingly accepted U.S. support during the 1980s. The more belligerent posture of recent years is largely a result of the U.S. destruction of much of the country's military and civilian infrastructure in the 1991 Gulf War, which was supported by a number of other Middle Eastern states with which Iraq had also once collaborated and been on friendly terms. Subsequent U.S.-led sanctions, periodic bombing raids, and invasion threats have resulted in widespread suffering of the population that has intensified anti-American sentiment. Had the United States adopted a more enlightened policy, such deep hatred would likely have not developed.

"And it has aided, trained, and harbored terrorists, including operatives of al Qaeda."
Every independent investigation of every Bush administration claim of a connection between the secular Iraqi government and the Islamist al Qaeda network has found no evidence of any Iraqi aid, training, or harboring of al Qaeda terrorists. According to both published U.S. government reports and independent analyses, Iraq's support for international terrorism--which has always been restricted to secular nationalists like the radical Palestinian Abu Nidal faction--peaked in the 1980s.

"The danger is clear: using chemical, biological or, one day, nuclear weapons, obtained with the help of Iraq, the terrorists could fulfill their stated ambitions and kill thousands or hundreds of thousands of innocent people in our country, or any other. The United States and other nations did nothing to deserve or invite this threat. But we will do everything to defeat it. Instead of drifting along toward tragedy, we will set a course toward safety. Before the day of horror can come, before it is too late to act, this danger will be removed."
The Bush administration has failed to present any evidence that Iraq has the intention to pass on weapons of mass destruction to terrorists, an act that would inevitably lead to a U.S.-led invasion, only in this case with the support of the international community. This is the essence of deterrence, which protected the United States and its allies from Josef Stalin, Mao Zedung, and other leaders as tyrannical and far more powerful militarily than Saddam Hussein. And no country has the right to invade another on some far-fetched scenario that they might do something someday. Ironically, as the CIA has noted in a report released this past

October, Saddam Hussein would not likely use WMDs as a first strike, but
in the case of a U.S. invasion--with nothing to lose and the logic of
deterrence no longer in effect--would be far more likely to use whatever
WMDs he may possess. In other words, a U.S. invasion, rather than
preventing the use of weapons of mass destruction, would be the most
likely--and the only realistic--scenario that such horrible weapons
would be utilized.

"The United States of America has the sovereign authority to use force
in assuring its own national security. That duty falls to me, as
Commander-in-Chief, by the oath I have sworn, by the oath I will keep."
The oath of office also demands that the president uphold and defend the
Constitution of the United States, which forbids such an illegal use of
force. Virtually no international legal authority recognizes such an
invasion as an act of assuring legitimate national security interests.

"Recognizing the threat to our country, the United States Congress voted
overwhelmingly last year to support the use of force against Iraq."
The U.S. Congress--with the support of both the Republican and
Democratic leadership--did authorize the use of force against Iraq.
However, the resolution violates Article I, Section 8 of the U.S.
Constitution which does not allow Congress to grant such open-ended
warmaking authority to the president for an offensive military action.
Only a formal declaration of war in such a situation can be considered
legitimate. Furthermore, Article VI of the Constitution declares that
international treaties to which the United States is a party are to be
treated as supreme law, thereby proscribing Congress from passing any
resolution that violates the UN Charter, such as supporting an invasion
of a sovereign nation. As a result, this resolution is unconstitutional
and thereby invalid.

"America tried to work with the United Nations to address this threat
because we wanted to resolve the issue peacefully. We believe in the
mission of the United Nations."
Then why is the United States violating the UN Charter, which forbids
the use of military force unless a country finds itself under armed
attack or it is explicitly authorized by the UN Security Council? The
mission of the United Nations is to preserve international peace and
security, not to approve the invasion of one country by another.

"One reason the UN was founded after the Second World War was to
confront aggressive dictators, actively and early, before they can
attack the innocent and destroy the peace."

The United States refused to confront Saddam Hussein active and early when he was committing acts of aggression against Iranians and Kurds and opposed decisive action by the United Nations. Iraq's ability to attack the innocent and destroy the peace has already been reduced dramatically through a series of actions by the United Nations, including authorizing the use of force to remove Iraqi occupation forces from Kuwait, placing strict military sanctions against the dictatorship, and overseeing the most aggressive unilateral disarmament effort and inspections regime in history.

"In the case of Iraq, the Security Council did act, in the early 1990s. Under Resolutions 678 and 687--both still in effect--the United States and our allies are authorized to use force in ridding Iraq of weapons of mass destruction. This is not a question of authority, it is a question of will."

The assertion that resolutions 678 and 687 give the United States the right to invade Iraq is patently false. Resolution 678 authorized the use of force to enforce prior UN Security Council resolutions demanding that Iraq remove its occupation forces from Kuwait. Once that was accomplished in late February 1991, the resolution became moot. Resolution 687 called for Iraqi disarmament of weapons of mass destruction and related delivery systems, but--even though it was the most detailed resolution in the history of the United Nations--no enforcement mechanism was specified. According to United Nations Charter, such resolutions can be enforced militarily only if the Security Council as a whole recognizes that a country is in material breach, determines that all non-military means have been exhausted, and specifically authorizes the use of force. The Security Council has not done so subsequent to the passage of resolution 678 in late November 1990.

"Last September, I went to the UN General Assembly and urged the nations of the world to unite and bring an end to this danger. On November 8th, the Security Council unanimously passed Resolution 1441, finding Iraq in material breach of its obligations, and vowing serious consequences if Iraq did not fully and immediately disarm."

True, but it did not authorize the use of force. Article 14 of that

resolution specifically noted that the Security Council would "remain seized of the matter," reiterating that only the Security Council as a whole--not any one member state--has the power to determine whether military force can be legitimately utilized to enforce its resolution.

"Today, no nation can possibly claim that Iraq has disarmed."
There actually are some nations that believe that Iraq has disarmed under the resolutions. Though this is not likely the case, the Bush administration has been unable to present clear evidence to the contrary.

"And it will not disarm so long as Saddam Hussein holds power."
This is sheer speculation. As a dictator who has proven his desire to ruthlessly hold on to power at all costs, he very well could disarm to save his regime. However, the Bush administration has made clear its intention to invade anyway, thereby providing little incentive for Saddam Hussein to do so.

"For the last four-and-a-half months, the United States and our allies have worked within the Security Council to enforce that Council's long-
standing demands. Yet, some permanent members of the Security Council have publicly announced they will veto any resolution that compels the disarmament of Iraq. These governments share our assessment of the danger, but not our resolve to meet it."
Actually, most Security Council members do not believe that Iraq is the
imminent threat that the United States claims it to be, though, if convincing evidence were presented that Iraq indeed posed a threat to international peace and security, a clear majority of the Security Council--including France--have indicated their willingness to authorize
the use of force. A veto of the proposed U.S.-sponsored resolution by France, Russia, and China would probably not have been necessary since the United States was unable--despite enormous pressure, including promises of increased foreign aid, trade preferences, and other incentives--to convince a simple majority of nations on the Council that
it was necessary to take the unprecedented step of authorizing the United States to invade Iraq, overthrow the government, and replace it with one more to its liking.

"Many nations, however, do have the resolve and fortitude to act against
this threat to peace, and a broad coalition is now gathering to enforce
the just demands of the world."
There is nothing close to the broad coalition such as that which joined
the United States in ridding Iraqi occupation forces from Kuwait in 1991, when Iraq clearly did constitute a threat to peace. As of this

writing, only one major power (Great Britain) and two minor powers (Spain and Australia) have offered to send troops. All three of these governments are doing so contrary to the sentiments of the vast majority
of their population and their combined participation still leaves the United States contributing at least 85% of combat forces. As columnist Maureen Dowd noted, since the Bush administration has driven virtually everyone from the schoolyard, it now has to rely on imaginary friends.

"The United Nations Security Council has not lived up to its responsibilities, so we will rise to ours."
In reality, the United Nations Security Council has gone to extraordinary efforts to minimize any threat to peace from Iraq, including authorizing the use of force in 1990 to enforce resolutions requiring an Iraqi withdrawal from occupied Kuwait, the imposition of strict sanctions against Iraq, and the creation of an inspections regime
that has been largely--if not 100%--effective. By contrast, it is not the responsibility of the United States or any country to invade a sovereign nation when it feels like it.

"In recent days, some governments in the Middle East have been doing their part. They have delivered public and private messages urging the dictator to leave Iraq, so that disarmament can proceed peacefully. He has thus far refused. All the decades of deceit and cruelty have now reached an end. Saddam Hussein and his sons must leave Iraq within 48 hours. Their refusal to do so will result in military conflict, commenced at a time of our choosing. For their own safety, all foreign nationals--including journalists and inspectors--should leave Iraq immediately."
President Bush has no authorization to demand that United Nations inspectors or foreign nationals leave Iraq. Nor does he have the right to demand that Saddam Hussein and his sons leave their country. No Security Council resolutions require that Saddam Hussein resign or that
he and any other member of his family go into exile. And neither the United States nor any other country has the right to commence an invasion of another country at the time of its choosing.

"Many Iraqis can hear me tonight in a translated radio broadcast, and I
have a message for them. If we must begin a military campaign, it will be directed against the lawless men who rule your country and not against you."
It is highly likely that a major U.S. military campaign--particularly one with such a heavy reliance on air power and the determination to seize by force a capital city of over five million people--will result in the deaths of thousands of innocent Iraqi civilians.

"As our coalition takes away their power, we will deliver the food and medicine you need."

In large part as a result of the U.S.-led sanctions, there are already severe shortages of food and medicines in Iraq. Strict and mostly equitable rationing have left few Iraqi families with more than a couple
of days' worth of food in storage. It is unlikely that the United States
will be able to supply most Iraqis with the food and medicine they need
in any timely manner.

"We will tear down the apparatus of terror and we will help you to build
a new Iraq that is prosperous and free. In a free Iraq, there will be no
more wars of aggression against your neighbors, no more poison factories, no more executions of dissidents, no more torture chambers and rape rooms."
The fact that the United States has supported scores of regimes--including a number in the Middle East--that have tortured, raped, and murdered dissidents raises serious questions as to whether the Bush administration really supports a free Iraq. The Bush administration's ongoing support of Moroccan occupation forces in Western Sahara, Turkish
occupation forces in northern Cyprus, and Israeli occupation forces in the West Bank, the Gaza Strip, and the Golan Heights raises serious questions as to whether the United States is actually bothered by countries that commit acts of aggression against neighbors. The United States also supports a number of Middle Eastern countries that are believed to have developed chemical weapons, similarly raising questions
as to whether the Bush administration is really worried about "poison factories."

"The tyrant will soon be gone. The day of your liberation is near."
Most Iraqis would certainly welcome the end of Saddam Hussein's regime.
But it is highly questionable whether a Western nation that has already
wrought enormous suffering for the Iraqi people, invades the country, and installs one of its own generals as a provisional military governor
will be seen as an act of liberation or a foreign occupation.

"It is too late for Saddam Hussein to remain in power. It is not too late for the Iraqi military to act with honor and protect your country by permitting the peaceful entry of coalition forces to eliminate weapons of mass destruction."
First, it is hard to imagine any national army--even under the most ruthless of dictators--that would not resist a foreign invasion. Second,
if the United States knows where these alleged weapons of mass

destruction are located, why haven't U.S. government officials informed
UNMOVIC inspectors, who have the authority to destroy them?

"Our forces will give Iraqi military units clear instructions on actions
they can take to avoid being attacked and destroyed. I urge every member
of the Iraqi military and intelligence services, if war comes, do not
fight for a dying regime that is not worth your own life. And all Iraqi
military and civilian personnel should listen carefully to this warning.
In any conflict, your fate will depend on your action. Do not destroy
oil wells, a source of wealth that belongs to the Iraqi people. Do not
obey any command to use weapons of mass destruction against anyone,
including the Iraqi people. War crimes will be prosecuted. War criminals
will be punished. And it will be no defense to say, "I was just
following orders"."
The United States has actively undermined and refused to participate in
the International Criminal Court, which was designed to try and punish
war criminals like Saddam Hussein. As a result, any such trials will
likely be under the tutelage of an occupying American army, which will
be seen by the vast majority of the international community as
illegitimate. For a foreign occupation army to try and punish leaders of
an internationally recognized government--however reprehensible they may
be--is in itself a war crime and would make these thugs martyrs in the
eyes of much of the world.

"Should Saddam Hussein choose confrontation, the American people can
know that every measure has been taken to avoid war, and every measure
will be taken to win it."
Refusing an illegitimate order by a foreign government to surrender
power is not choosing confrontation. And, clearly, the Bush
administration has not taken "every measure to avoid war."

"Americans understand the costs of conflict because we have paid them in
the past. War has no certainty, except the certainty of sacrifice. Yet,
the only way to reduce the harm and duration of war is to apply the full
force and might of our military, and we are prepared to do so. If Saddam
Hussein attempts to cling to power, he will remain a deadly foe until
the end. In desperation, he and terrorists groups might try to conduct
terrorist operations against the American people and our friends.

These
attacks are not inevitable. They are, however, possible."
Then why prosecute and unnecessary and illegal war?

"And this very fact underscores the reason we cannot live under the
threat of blackmail. The terrorist threat to America and the world
will
be diminished the moment that Saddam Hussein is disarmed."
According to the CIA and other estimates, Iraq has not engaged in any anti-American terrorism since the alleged 1993 assassination attempt against former President George Bush and has already dramatically reduced his support for international terrorism since the 1980s, when the United States was supporting his government. By contrast, most intelligence analyses predict an increase in the terrorist threat to America and its allies should the United States invade Iraq.

"Our government is on heightened watch against these dangers. Just as
we
are preparing to ensure victory in Iraq, we are taking further actions to protect our homeland. In recent days, American authorities have expelled from the country certain individuals with ties to Iraqi intelligence services. Among other measures, I have directed
additional
security of our airports, and increased Coast Guard patrols of major seaports. The Department of Homeland Security is working closely with the nation's governors to increase armed security at critical
facilities
across America. Should enemies strike our country, they would be attempting to shift our attention with panic and weaken our morale
with
fear. In this, they would fail. No act of theirs can alter the course
or
shake the resolve of this country. We are a peaceful people--yet we're not a fragile people, and we will not be intimidated by thugs and killers. If our enemies dare to strike us, they and all who have aided them, will face fearful consequences."
The chances of the United States being attacked will be greatly increased if the U.S. attacks first. Indeed, if there was any logic behind the madness of 9/11, it was Osama bin Laden's hope that the United States would react in such a way that would only increase the popularity of anti-American extremists. History has shown that the
more
the United States has militarized the Middle East, the less secure we have become.

"We are now acting because the risks of inaction would be far greater. In one year, or five years, the power of Iraq to inflict harm on all free nations would be multiplied many times over. With these capabilities, Saddam Hussein and his terrorist allies could choose the moment of deadly conflict when they are strongest. We choose to meet that threat now, where it arises, before it can appear suddenly in our

skies and cities."
Iraq has never threatened to attack the United States nor does it have the ability to attack the United States. That country became a formidable military threat back in the 1980s as a result of support from
industrialized nations like the U.S., Great Britain, France, Germany, and Russia. With a strict military embargo imposed upon the country since 1990, it will be extremely difficult for Iraq to become a military
threat to the United States or any other country.

"The cause of peace requires all free nations to recognize new and undeniable realities. In the 20th century, some chose to appease murderous dictators, whose threats were allowed to grow into genocide and global war. In this century, when evil men plot chemical, biological
and nuclear terror, a policy of appeasement could bring destruction of a
kind never before seen on this earth."
The analogy with Hitler's Germany and other Axis powers is spurious. Germany was the most powerful industrialized country in the world in the
1930s. Iraq, by contrast, is a poor, third-world country that has had most of its military infrastructure destroyed and has been under the strictest military and economic sanctions in world history. The current
UN policy of inspections, sanctions, and the threat of UN-sanctioned war
if Iraq again threatens its neighbors can hardly be considered "appeasement." None of the Axis powers of the 1930s were ever subjected
to such international pressure until they had invaded and occupied dozens of nations in Europe, Asia, and Africa. Iraq has not invaded and
occupied any countries since its six-month occupation of Kuwait in 1990-
91.

"Terrorists and terror states do not reveal these threats with fair notice, in formal declarations--and responding to such enemies only after they have struck first is not self-defense, it is suicide. The security of the world requires disarming Saddam Hussein now."
Essentially, President Bush is saying that a country has the right to invade and occupy another country without any evidence that the targeted
country has the intention, willingness, or ability to strike first. This
would give virtually any country the right to invade any other. Most of
Iraq's neighbors do not consider Iraq to be a threat, either now or in the perceivable future.

"As we enforce the just demands of the world, we will also honor the deepest commitments of our country."
Violating the U.S. Constitution and international legal covenants to which the U.S. government is legally bound is, in reality, a dishonor to
the deepest commitments of the United States.

"Unlike Saddam Hussein, we believe the Iraqi people are deserving and capable of human liberty. And when the dictator has departed, they can set an example to all the Middle East of a vital and peaceful and self-
governing nation."
If the United States really believes the Iraqi people are deserving and
capable of human liberty, then why did the U.S. support Saddam Hussein during the height of his terror? And why are the leading candidates the
United States hopes to install in Baghdad to replace the current dictatorship lacking anything remotely resembling democratic credentials?

"The United States, with other countries, will work to advance liberty and peace in that region."
Then why does the United States support dictatorships in Egypt, Saudi Arabia, Oman, Kuwait, Pakistan, Uzbekistan, and other autocratic regimes? And why does the United States support Moroccan, Israeli, and Turkish occupation forces? Such policies belie any claim of support for
liberty and peace.

"Our goal will not be achieved overnight, but it can come over time. The
power and appeal of human liberty is felt in every life and every land.
And the greatest power of freedom is to overcome hatred and violence, and turn the creative gifts of men and women to the pursuits of peace."
To unleash bombs and missiles on cities, to engage in war-mongering, and
to lie to the American people and the world in order to rationalize such
an invasion is itself a form of hatred and violence.

"That is the future we choose. Free nations have a duty to defend our people by uniting against the violent. And tonight, as we have done before, America and our allies accept that responsibility. Good night, and may God continue to bless America."
And may God forgive President Bush and the congressional leaders of both
parties who are responsible for unleashing such horrific violence against the people of Iraq.

A War Crime or an Act of War?
By STEPHEN C. PELLETIERE

MECHANICSBURG, Pa. - It was no surprise that President Bush, lacking smoking-gun evidence of
Iraq's weapons programs, used his State of the Union address to re-emphasize the moral case for
an invasion: "The dictator who is assembling the world's most dangerous weapons has already
used them on whole villages, leaving thousands of his own citizens dead, blind or disfigured."
The accusation that Iraq has used chemical weapons against its citizens is a familiar part of
the debate. The piece of hard evidence most frequently brought up concerns the gassing of Iraqi
Kurds at the town of Halabja in March 1988, near the end of the eight-year Iran-Iraq war.
President Bush himself has cited Iraq's "gassing its own people," specifically at Halabja, as a
reason to topple Saddam Hussein.
But the truth is, all we know for certain is that Kurds were bombarded with poison gas that day
at Halabja. We cannot say with any certainty that Iraqi chemical weapons killed the Kurds. This
is not the only distortion in the Halabja story.
I am in a position to know because, as the Central Intelligence Agency's senior political
analyst on Iraq during the Iran-Iraq war, and as a professor at the Army War College from 1988
to 2000, I was privy to much of the classified material that flowed through Washington having

to do with the Persian Gulf. In addition, I headed a 1991 Army investigation into how the
Iraqis would fight a war against the United States; the classified version of the report went
into great detail on the Halabja affair.
This much about the gassing at Halabja we undoubtedly know: it came about in the course of a
battle between Iraqis and Iranians. Iraq used chemical weapons to try to kill Iranians who had
seized the town, which is in northern Iraq not far from the Iranian border. The Kurdish
civilians who died had the misfortune to be caught up in that exchange. But they were not
Iraq's main target.
And the story gets murkier: immediately after the battle the United States Defense Intelligence
Agency investigated and produced a classified report, which it circulated within the
intelligence community on a need-to-know basis. That study asserted that it was Iranian gas
that killed the Kurds, not Iraqi gas.
The agency did find that each side used gas against the other in the battle around Halabja. The
condition of the dead Kurds' bodies, however, indicated they had been killed with a blood
agent - that is, a cyanide-based gas - which Iran was known to use. The Iraqis, who are thought
to have used mustard gas in the battle, are not known to have possessed blood agents at the
time.
These facts have long been in the public domain but, extraordinarily, as often as the Halabja
affair is cited, they are rarely mentioned. A much-discussed article in The New Yorker last
March did not make reference to the Defense Intelligence Agency report or consider that Iranian
gas might have killed the Kurds. On the rare occasions the report is brought up, there is
usually speculation, with no proof, that it was skewed out of American political favoritism
toward Iraq in its war against Iran.
I am not trying to rehabilitate the character of Saddam Hussein. He has much to answer for in
the area of human rights abuses. But accusing him of gassing his own people at Halabja as an
act of genocide is not correct, because as far as the information we have goes, all of the
cases where gas was used involved battles. These were tragedies of war. There may be
justifications for invading Iraq, but Halabja is not one of them.

In fact, those who really feel that the disaster at Halabja has bearing on today might want to consider a different question: Why was Iran so keen on taking the town? A closer look may shed light on America's impetus to invade Iraq.

We are constantly reminded that Iraq has perhaps the world's largest reserves of oil. But in a regional and perhaps even geopolitical sense, it may be more important that Iraq has the most extensive river system in the Middle East. In addition to the Tigris and Euphrates, there are the Greater Zab and Lesser Zab rivers in the north of the country. Iraq was covered with irrigation works by the sixth century A.D., and was a granary for the region.

Before the Persian Gulf war, Iraq had built an impressive system of dams and river control projects, the largest being the Darbandikhan dam in the Kurdish area. And it was this dam the Iranians were aiming to take control of when they seized Halabja. In the 1990's there was much discussion over the construction of a so-called Peace Pipeline that would bring the waters of the Tigris and Euphrates south to the parched Gulf states and, by extension, Israel. No progress has been made on this, largely because of Iraqi intransigence. With Iraq in American hands, of course, all that could change.

Thus America could alter the destiny of the Middle East in a way that probably could not be challenged for decades - not solely by controlling Iraq's oil, but by controlling its water.

Even if America didn't occupy the country, once Mr. Hussein's Baath Party is driven from power, many lucrative opportunities would open up for American companies.

All that is needed to get us into war is one clear reason for acting, one that would be generally persuasive. But efforts to link the Iraqis directly to Osama bin Laden have proved inconclusive. Assertions that Iraq threatens its neighbors have also failed to create much resolve; in its present debilitated condition - thanks to United Nations sanctions - Iraq's conventional forces threaten no one.

Perhaps the strongest argument left for taking us to war quickly is that Saddam Hussein has committed human rights atrocities against his people. And the most dramatic case are the accusations about Halabja.

Before we go to war over Halabja, the administration owes the American people the full facts.

And if it has other examples of Saddam Hussein gassing Kurds, it must show that they were not
pro-Iranian Kurdish guerrillas who died fighting alongside Iranian Revolutionary Guards. Until
Washington gives us proof of Saddam Hussein's supposed atrocities, why are we picking on Iraq
on human rights grounds, particularly when there are so many other repressive regimes
Washington supports?
Stephen C. Pelletiere is author of "Iraq and the International Oil System: Why America Went to
War in the Persian Gulf."

Responding to Bush's speech line by line, lie by lie

An Annotated Critique of President George W. Bush's March 17 Address Preparing the Nation for War

FPIF Middle Eastern Editor, Stephen Zunes, provides an annotated critique of the president's address to the nation about imminent war against Iraq. Given that the Democratic Party leadership in Congress declined to take their traditional opportuntity to offer a formal response, FPIF provides a response to all the president's arguments for
war. Line by line, argument by argument, falsehood by falsehood, Zunes responds to the president.

Stephen Zunes is an associate professor of politics and chair of the Peace & Justice Studies Program at the University of San Francisco.

(Editors' Note: Below is a transcript of President George W. Bush's address to the nation on Monday, March 17, announcing his readiness to order a U.S. invasion of Iraq followed by an analysis highlighting some
of the lies and misleading statements in the speech. Such an overview is
necessary since the Democratic Party leadership in Congress, which has pledged to support the president in the event of war, declined to take their traditional opportunity to offer a formal response. The Green Party, which opposes the war, was not given the opportunity by the networks to respond.)

"My fellow citizens, events in Iraq have now reached the final days of decision. For more than a decade, the United States and other nations have pursued patient and honorable efforts to disarm the Iraqi regime without war."
This is patently false. In 1998, President Bill Clinton successfully pressured UNSCOM director Richard Butler to withdraw inspectors without
authorization from the Secretary General or the Security Council--before
their mission was complete--in order to engage in a four-day heavy

bombing campaign against Iraq. As predicted at the time, this illegal use of military force--combined with revelations that the United States had abused the inspections process for espionage purposes--resulted in the Iraqi government barring the inspectors' return until a reorganized inspections commission known as UNMOVIC commenced inspections last year. UNMOVIC chairman Hans Blix and UN Secretary General Kofi Annan explicitly called upon the United States and the international community to give the inspectors more time to do their job, noting that it would take a number of months before their mission could be completed.

"That regime pledged to reveal and destroy all its weapons of mass destruction as a condition for ending the Persian Gulf War in 1991." Iraq was presented with this demand as part of UN Security Council resolution 687, which mandated Iraqi disarmament of its weapons of mass destruction and related delivery systems. This was a unilateral decree from the Security Council which--while nominally part of the ceasefire agreement--was void of any explicit threat to continue prosecuting the war if Iraq did not agree to the disarmament provisions. It is noteworthy that the demand for Iraqi disarmament in the resolution was put forward within the context of a call for regional disarmament. The United States has refused to encourage any regional disarmament initiative, however, and remains a strong supporter of the Israeli and Pakistani governments, which have advanced nuclear arsenals among other weapons of mass destruction.

"Since then, the world has engaged in 12 years of diplomacy. We have passed more than a dozen resolutions in the United Nations Security Council. We have sent hundreds of weapons inspectors to oversee the disarmament of Iraq. Our good faith has not been returned. The Iraqi regime has used diplomacy as a ploy to gain time and advantage. It has uniformly defied Security Council resolutions demanding full disarmament." Iraq's cooperation has indeed been less than total, but most independent reports--even during UNSCOM's inspections regime between 1991 and 1998--conclude that cooperation was close to 90%. According to UNMOVIC, Iraq's cooperation since inspections resumed last year has been far better.

"Over the years, UN weapon inspectors have been threatened by Iraqi officials, electronically bugged, and systematically deceived." This was not an uncommon practice during the UNSCOM era, but there have been no reports from UNMOVIC of such harassment subsequently.

"Peaceful efforts to disarm the Iraqi regime have failed again and again--because we are not dealing with peaceful men."
Peaceful efforts at disarming Iraq have succeeded in eliminating somewhere between 95% and 100% of Iraq's weapons of mass destruction and
related materiel and delivery systems as a result of UN Security Council
resolution 687 and subsequent resolutions. The determination to go to war despite such success raises serious questions as to whether the United States is governed by peaceful men.

"Intelligence gathered by this and other governments leaves no doubt that the Iraq regime continues to possess and conceal some of the most lethal weapons ever devised."
If the United States really has evidence that the Iraqi government continues to possess and conceal weapons of mass destruction, why has the Bush administration refused to make such evidence public or pass such intelligence on to United Nations inspectors, who have the authority to destroy them?

"This regime has already used weapons of mass destruction against Iraq's
neighbors and against Iraq's people."
Iraq did use chemical weapons against Iranian troops and Kurdish civilians back in the 1980s when Saddam Hussein's regime was being supported by the United States. The Reagan administration covered up for
the Halabja massacre and similar attacks against Kurdish civilians by falsely claiming that it was the Iranians--then the preferred enemy--who
were responsible. In addition, the U.S. Defense Intelligence Agency provided Iraq with U.S. satellite data to help Saddam Hussein's forces locate Iranian troop concentrations in the full knowledge that they were
using chemical weapons. Many of the key components of Iraq's chemical weapons program came from the United States, ostensibly for pesticides as part of taxpayer-funded agricultural subsidies, despite evidence that
these U.S.-manufactured chemicals were probably being diverted for use in illegal chemical weapons.

"The regime has a history of reckless aggression in the Middle East."
This is true, though Iraq's invasion of Iran in 1980 was quietly supported by the U.S. government and ambivalent signals by the U.S. ambassador to Iraq immediately prior to the Iraqi invasion of Kuwait may
have emboldened Saddam Hussein to conquer the sheikdom in 1990. Now, with Iraq's offensive military capability just a fraction of what is was
during that period and an unambiguous resolve by the international community to thwart such future aggression, there is little chance of Iraq invading another country again.

"It has a deep hatred of America and our friends."
Iraq willingly accepted U.S. support during the 1980s. The more belligerent posture of recent years is largely a result of the U.S. destruction of much of the country's military and civilian infrastructure in the 1991 Gulf War, which was supported by a number of other Middle Eastern states with which Iraq had also once collaborated and been on friendly terms. Subsequent U.S.-led sanctions, periodic bombing raids, and invasion threats have resulted in widespread suffering of the population that has intensified anti-American sentiment. Had the United States adopted a more enlightened policy, such deep hatred would likely have not developed.

"And it has aided, trained, and harbored terrorists, including operatives of al Qaeda."
Every independent investigation of every Bush administration claim of a connection between the secular Iraqi government and the Islamist al Qaeda network has found no evidence of any Iraqi aid, training, or harboring of al Qaeda terrorists. According to both published U.S. government reports and independent analyses, Iraq's support for international terrorism--which has always been restricted to secular nationalists like the radical Palestinian Abu Nidal faction--peaked in the 1980s.

"The danger is clear: using chemical, biological or, one day, nuclear weapons, obtained with the help of Iraq, the terrorists could fulfill their stated ambitions and kill thousands or hundreds of thousands of innocent people in our country, or any other. The United States and other nations did nothing to deserve or invite this threat. But we will do everything to defeat it. Instead of drifting along toward tragedy, we will set a course toward safety. Before the day of horror can come, before it is too late to act, this danger will be removed."
The Bush administration has failed to present any evidence that Iraq has the intention to pass on weapons of mass destruction to terrorists, an act that would inevitably lead to a U.S.-led invasion, only in this case with the support of the international community. This is the essence of deterrence, which protected the United States and its allies from Josef Stalin, Mao Zedung, and other leaders as tyrannical and far more powerful militarily than Saddam Hussein. And no country has the right to invade another on some far-fetched scenario that they might do something someday. Ironically, as the CIA has noted in a report released this past

October, Saddam Hussein would not likely use WMDs as a first strike, but
in the case of a U.S. invasion--with nothing to lose and the logic of
deterrence no longer in effect--would be far more likely to use whatever
WMDs he may possess. In other words, a U.S. invasion, rather than
preventing the use of weapons of mass destruction, would be the most
likely--and the only realistic--scenario that such horrible weapons
would be utilized.

"The United States of America has the sovereign authority to use force
in assuring its own national security. That duty falls to me, as
Commander-in-Chief, by the oath I have sworn, by the oath I will keep."
The oath of office also demands that the president uphold and defend the
Constitution of the United States, which forbids such an illegal use of
force. Virtually no international legal authority recognizes such an
invasion as an act of assuring legitimate national security interests.

"Recognizing the threat to our country, the United States Congress voted
overwhelmingly last year to support the use of force against Iraq."
The U.S. Congress--with the support of both the Republican and
Democratic leadership--did authorize the use of force against Iraq.
However, the resolution violates Article I, Section 8 of the U.S.
Constitution which does not allow Congress to grant such open-ended
warmaking authority to the president for an offensive military action.
Only a formal declaration of war in such a situation can be considered
legitimate. Furthermore, Article VI of the Constitution declares that
international treaties to which the United States is a party are to be
treated as supreme law, thereby proscribing Congress from passing any
resolution that violates the UN Charter, such as supporting an invasion
of a sovereign nation. As a result, this resolution is unconstitutional
and thereby invalid.

"America tried to work with the United Nations to address this threat
because we wanted to resolve the issue peacefully. We believe in the
mission of the United Nations."
Then why is the United States violating the UN Charter, which forbids
the use of military force unless a country finds itself under armed
attack or it is explicitly authorized by the UN Security Council? The
mission of the United Nations is to preserve international peace and
security, not to approve the invasion of one country by another.

"One reason the UN was founded after the Second World War was to
confront aggressive dictators, actively and early, before they can
attack the innocent and destroy the peace."

The United States refused to confront Saddam Hussein active and early when he was committing acts of aggression against Iranians and Kurds and opposed decisive action by the United Nations. Iraq's ability to attack the innocent and destroy the peace has already been reduced dramatically through a series of actions by the United Nations, including authorizing the use of force to remove Iraqi occupation forces from Kuwait, placing strict military sanctions against the dictatorship, and overseeing the most aggressive unilateral disarmament effort and inspections regime in history.

"In the case of Iraq, the Security Council did act, in the early 1990s. Under Resolutions 678 and 687--both still in effect--the United States and our allies are authorized to use force in ridding Iraq of weapons of mass destruction. This is not a question of authority, it is a question of will."

The assertion that resolutions 678 and 687 give the United States the right to invade Iraq is patently false. Resolution 678 authorized the use of force to enforce prior UN Security Council resolutions demanding that Iraq remove its occupation forces from Kuwait. Once that was accomplished in late February 1991, the resolution became moot. Resolution 687 called for Iraqi disarmament of weapons of mass destruction and related delivery systems, but--even though it was the most detailed resolution in the history of the United Nations--no enforcement mechanism was specified. According to United Nations Charter, such resolutions can be enforced militarily only if the Security Council as a whole recognizes that a country is in material breach, determines that all non-military means have been exhausted, and specifically authorizes the use of force. The Security Council has not done so subsequent to the passage of resolution 678 in late November 1990.

"Last September, I went to the UN General Assembly and urged the nations of the world to unite and bring an end to this danger. On November 8th, the Security Council unanimously passed Resolution 1441, finding Iraq in material breach of its obligations, and vowing serious consequences if Iraq did not fully and immediately disarm."

True, but it did not authorize the use of force. Article 14 of that

resolution specifically noted that the Security Council would "remain seized of the matter," reiterating that only the Security Council as a whole--not any one member state--has the power to determine whether military force can be legitimately utilized to enforce its resolution.

"Today, no nation can possibly claim that Iraq has disarmed."
There actually are some nations that believe that Iraq has disarmed under the resolutions. Though this is not likely the case, the Bush administration has been unable to present clear evidence to the contrary.

"And it will not disarm so long as Saddam Hussein holds power."
This is sheer speculation. As a dictator who has proven his desire to ruthlessly hold on to power at all costs, he very well could disarm to save his regime. However, the Bush administration has made clear its intention to invade anyway, thereby providing little incentive for Saddam Hussein to do so.

"For the last four-and-a-half months, the United States and our allies have worked within the Security Council to enforce that Council's long-
standing demands. Yet, some permanent members of the Security Council have publicly announced they will veto any resolution that compels the disarmament of Iraq. These governments share our assessment of the danger, but not our resolve to meet it."
Actually, most Security Council members do not believe that Iraq is the
imminent threat that the United States claims it to be, though, if convincing evidence were presented that Iraq indeed posed a threat to international peace and security, a clear majority of the Security Council--including France--have indicated their willingness to authorize
the use of force. A veto of the proposed U.S.-sponsored resolution by France, Russia, and China would probably not have been necessary since the United States was unable--despite enormous pressure, including promises of increased foreign aid, trade preferences, and other incentives--to convince a simple majority of nations on the Council that
it was necessary to take the unprecedented step of authorizing the United States to invade Iraq, overthrow the government, and replace it with one more to its liking.

"Many nations, however, do have the resolve and fortitude to act against
this threat to peace, and a broad coalition is now gathering to enforce
the just demands of the world."
There is nothing close to the broad coalition such as that which joined
the United States in ridding Iraqi occupation forces from Kuwait in 1991, when Iraq clearly did constitute a threat to peace. As of this

writing, only one major power (Great Britain) and two minor powers (Spain and Australia) have offered to send troops. All three of these governments are doing so contrary to the sentiments of the vast majority
of their population and their combined participation still leaves the United States contributing at least 85% of combat forces. As columnist Maureen Dowd noted, since the Bush administration has driven virtually everyone from the schoolyard, it now has to rely on imaginary friends.

"The United Nations Security Council has not lived up to its responsibilities, so we will rise to ours."
In reality, the United Nations Security Council has gone to extraordinary efforts to minimize any threat to peace from Iraq, including authorizing the use of force in 1990 to enforce resolutions requiring an Iraqi withdrawal from occupied Kuwait, the imposition of strict sanctions against Iraq, and the creation of an inspections regime
that has been largely--if not 100%--effective. By contrast, it is not the responsibility of the United States or any country to invade a sovereign nation when it feels like it.

"In recent days, some governments in the Middle East have been doing their part. They have delivered public and private messages urging the dictator to leave Iraq, so that disarmament can proceed peacefully. He has thus far refused. All the decades of deceit and cruelty have now reached an end. Saddam Hussein and his sons must leave Iraq within 48 hours. Their refusal to do so will result in military conflict, commenced at a time of our choosing. For their own safety, all foreign nationals--including journalists and inspectors--should leave Iraq immediately."
President Bush has no authorization to demand that United Nations inspectors or foreign nationals leave Iraq. Nor does he have the right to demand that Saddam Hussein and his sons leave their country. No Security Council resolutions require that Saddam Hussein resign or that
he and any other member of his family go into exile. And neither the United States nor any other country has the right to commence an invasion of another country at the time of its choosing.

"Many Iraqis can hear me tonight in a translated radio broadcast, and I
have a message for them. If we must begin a military campaign, it will be directed against the lawless men who rule your country and not against you."
It is highly likely that a major U.S. military campaign--particularly one with such a heavy reliance on air power and the determination to seize by force a capital city of over five million people--will result in the deaths of thousands of innocent Iraqi civilians.

"As our coalition takes away their power, we will deliver the food and medicine you need."

In large part as a result of the U.S.-led sanctions, there are already severe shortages of food and medicines in Iraq. Strict and mostly equitable rationing have left few Iraqi families with more than a couple
of days' worth of food in storage. It is unlikely that the United States
will be able to supply most Iraqis with the food and medicine they need
in any timely manner.

"We will tear down the apparatus of terror and we will help you to build
a new Iraq that is prosperous and free. In a free Iraq, there will be no
more wars of aggression against your neighbors, no more poison factories, no more executions of dissidents, no more torture chambers and rape rooms."
The fact that the United States has supported scores of regimes--including a number in the Middle East--that have tortured, raped, and murdered dissidents raises serious questions as to whether the Bush administration really supports a free Iraq. The Bush administration's ongoing support of Moroccan occupation forces in Western Sahara, Turkish
occupation forces in northern Cyprus, and Israeli occupation forces in the West Bank, the Gaza Strip, and the Golan Heights raises serious questions as to whether the United States is actually bothered by countries that commit acts of aggression against neighbors. The United States also supports a number of Middle Eastern countries that are believed to have developed chemical weapons, similarly raising questions
as to whether the Bush administration is really worried about "poison factories."

"The tyrant will soon be gone. The day of your liberation is near."
Most Iraqis would certainly welcome the end of Saddam Hussein's regime.
But it is highly questionable whether a Western nation that has already
wrought enormous suffering for the Iraqi people, invades the country, and installs one of its own generals as a provisional military governor
will be seen as an act of liberation or a foreign occupation.

"It is too late for Saddam Hussein to remain in power. It is not too late for the Iraqi military to act with honor and protect your country by permitting the peaceful entry of coalition forces to eliminate weapons of mass destruction."
First, it is hard to imagine any national army--even under the most ruthless of dictators--that would not resist a foreign invasion. Second,
if the United States knows where these alleged weapons of mass

destruction are located, why haven't U.S. government officials informed
UNMOVIC inspectors, who have the authority to destroy them?

"Our forces will give Iraqi military units clear instructions on actions
they can take to avoid being attacked and destroyed. I urge every member
of the Iraqi military and intelligence services, if war comes, do not
fight for a dying regime that is not worth your own life. And all Iraqi
military and civilian personnel should listen carefully to this warning.
In any conflict, your fate will depend on your action. Do not destroy
oil wells, a source of wealth that belongs to the Iraqi people. Do not
obey any command to use weapons of mass destruction against anyone,
including the Iraqi people. War crimes will be prosecuted. War criminals
will be punished. And it will be no defense to say, "I was just
following orders"."
The United States has actively undermined and refused to participate in
the International Criminal Court, which was designed to try and punish
war criminals like Saddam Hussein. As a result, any such trials will
likely be under the tutelage of an occupying American army, which will
be seen by the vast majority of the international community as
illegitimate. For a foreign occupation army to try and punish leaders of
an internationally recognized government--however reprehensible they may
be--is in itself a war crime and would make these thugs martyrs in the
eyes of much of the world.

"Should Saddam Hussein choose confrontation, the American people can
know that every measure has been taken to avoid war, and every measure
will be taken to win it."
Refusing an illegitimate order by a foreign government to surrender
power is not choosing confrontation. And, clearly, the Bush
administration has not taken "every measure to avoid war."

"Americans understand the costs of conflict because we have paid them in
the past. War has no certainty, except the certainty of sacrifice. Yet,
the only way to reduce the harm and duration of war is to apply the full
force and might of our military, and we are prepared to do so. If Saddam
Hussein attempts to cling to power, he will remain a deadly foe until
the end. In desperation, he and terrorists groups might try to conduct
terrorist operations against the American people and our friends.

These
attacks are not inevitable. They are, however, possible."
Then why prosecute and unnecessary and illegal war?

"And this very fact underscores the reason we cannot live under the
threat of blackmail. The terrorist threat to America and the world
will
be diminished the moment that Saddam Hussein is disarmed."
According to the CIA and other estimates, Iraq has not engaged in any anti-American terrorism since the alleged 1993 assassination attempt against former President George Bush and has already dramatically reduced his support for international terrorism since the 1980s, when the United States was supporting his government. By contrast, most intelligence analyses predict an increase in the terrorist threat to America and its allies should the United States invade Iraq.

"Our government is on heightened watch against these dangers. Just as
we
are preparing to ensure victory in Iraq, we are taking further actions to protect our homeland. In recent days, American authorities have expelled from the country certain individuals with ties to Iraqi intelligence services. Among other measures, I have directed
additional
security of our airports, and increased Coast Guard patrols of major seaports. The Department of Homeland Security is working closely with the nation's governors to increase armed security at critical
facilities
across America. Should enemies strike our country, they would be attempting to shift our attention with panic and weaken our morale
with
fear. In this, they would fail. No act of theirs can alter the course
or
shake the resolve of this country. We are a peaceful people--yet we're not a fragile people, and we will not be intimidated by thugs and killers. If our enemies dare to strike us, they and all who have aided them, will face fearful consequences."
The chances of the United States being attacked will be greatly increased if the U.S. attacks first. Indeed, if there was any logic behind the madness of 9/11, it was Osama bin Laden's hope that the United States would react in such a way that would only increase the popularity of anti-American extremists. History has shown that the
more
the United States has militarized the Middle East, the less secure we have become.

"We are now acting because the risks of inaction would be far greater. In one year, or five years, the power of Iraq to inflict harm on all free nations would be multiplied many times over. With these capabilities, Saddam Hussein and his terrorist allies could choose the moment of deadly conflict when they are strongest. We choose to meet that threat now, where it arises, before it can appear suddenly in our

skies and cities."
Iraq has never threatened to attack the United States nor does it have the ability to attack the United States. That country became a formidable military threat back in the 1980s as a result of support from
industrialized nations like the U.S., Great Britain, France, Germany, and Russia. With a strict military embargo imposed upon the country since 1990, it will be extremely difficult for Iraq to become a military
threat to the United States or any other country.

"The cause of peace requires all free nations to recognize new and undeniable realities. In the 20th century, some chose to appease murderous dictators, whose threats were allowed to grow into genocide and global war. In this century, when evil men plot chemical, biological
and nuclear terror, a policy of appeasement could bring destruction of a
kind never before seen on this earth."
The analogy with Hitler's Germany and other Axis powers is spurious. Germany was the most powerful industrialized country in the world in the
1930s. Iraq, by contrast, is a poor, third-world country that has had most of its military infrastructure destroyed and has been under the strictest military and economic sanctions in world history. The current
UN policy of inspections, sanctions, and the threat of UN-sanctioned war
if Iraq again threatens its neighbors can hardly be considered "appeasement." None of the Axis powers of the 1930s were ever subjected
to such international pressure until they had invaded and occupied dozens of nations in Europe, Asia, and Africa. Iraq has not invaded and
occupied any countries since its six-month occupation of Kuwait in 1990-
91.

"Terrorists and terror states do not reveal these threats with fair notice, in formal declarations--and responding to such enemies only after they have struck first is not self-defense, it is suicide. The security of the world requires disarming Saddam Hussein now."
Essentially, President Bush is saying that a country has the right to invade and occupy another country without any evidence that the targeted
country has the intention, willingness, or ability to strike first. This
would give virtually any country the right to invade any other. Most of
Iraq's neighbors do not consider Iraq to be a threat, either now or in the perceivable future.

"As we enforce the just demands of the world, we will also honor the deepest commitments of our country."
Violating the U.S. Constitution and international legal covenants to which the U.S. government is legally bound is, in reality, a dishonor to
the deepest commitments of the United States.

"Unlike Saddam Hussein, we believe the Iraqi people are deserving and capable of human liberty. And when the dictator has departed, they can set an example to all the Middle East of a vital and peaceful and self-
governing nation."
If the United States really believes the Iraqi people are deserving and
capable of human liberty, then why did the U.S. support Saddam Hussein during the height of his terror? And why are the leading candidates the
United States hopes to install in Baghdad to replace the current dictatorship lacking anything remotely resembling democratic credentials?

"The United States, with other countries, will work to advance liberty and peace in that region."
Then why does the United States support dictatorships in Egypt, Saudi Arabia, Oman, Kuwait, Pakistan, Uzbekistan, and other autocratic regimes? And why does the United States support Moroccan, Israeli, and Turkish occupation forces? Such policies belie any claim of support for
liberty and peace.

"Our goal will not be achieved overnight, but it can come over time. The
power and appeal of human liberty is felt in every life and every land.
And the greatest power of freedom is to overcome hatred and violence, and turn the creative gifts of men and women to the pursuits of peace."
To unleash bombs and missiles on cities, to engage in war-mongering, and
to lie to the American people and the world in order to rationalize such
an invasion is itself a form of hatred and violence.

"That is the future we choose. Free nations have a duty to defend our people by uniting against the violent. And tonight, as we have done before, America and our allies accept that responsibility. Good night, and may God continue to bless America."
And may God forgive President Bush and the congressional leaders of both
parties who are responsible for unleashing such horrific violence against the people of Iraq.

A War Crime or an Act of War?
By STEPHEN C. PELLETIERE

MECHANICSBURG, Pa. - It was no surprise that President Bush, lacking smoking-gun evidence of
Iraq's weapons programs, used his State of the Union address to re-emphasize the moral case for
an invasion: "The dictator who is assembling the world's most dangerous weapons has already
used them on whole villages, leaving thousands of his own citizens dead, blind or disfigured."
The accusation that Iraq has used chemical weapons against its citizens is a familiar part of
the debate. The piece of hard evidence most frequently brought up concerns the gassing of Iraqi
Kurds at the town of Halabja in March 1988, near the end of the eight-year Iran-Iraq war.
President Bush himself has cited Iraq's "gassing its own people," specifically at Halabja, as a
reason to topple Saddam Hussein.
But the truth is, all we know for certain is that Kurds were bombarded with poison gas that day
at Halabja. We cannot say with any certainty that Iraqi chemical weapons killed the Kurds. This
is not the only distortion in the Halabja story.
I am in a position to know because, as the Central Intelligence Agency's senior political
analyst on Iraq during the Iran-Iraq war, and as a professor at the Army War College from 1988
to 2000, I was privy to much of the classified material that flowed through Washington having

to do with the Persian Gulf. In addition, I headed a 1991 Army investigation into how the
Iraqis would fight a war against the United States; the classified version of the report went
into great detail on the Halabja affair.
This much about the gassing at Halabja we undoubtedly know: it came about in the course of a
battle between Iraqis and Iranians. Iraq used chemical weapons to try to kill Iranians who had
seized the town, which is in northern Iraq not far from the Iranian border. The Kurdish
civilians who died had the misfortune to be caught up in that exchange. But they were not
Iraq's main target.
And the story gets murkier: immediately after the battle the United States Defense Intelligence
Agency investigated and produced a classified report, which it circulated within the
intelligence community on a need-to-know basis. That study asserted that it was Iranian gas
that killed the Kurds, not Iraqi gas.
The agency did find that each side used gas against the other in the battle around Halabja. The
condition of the dead Kurds' bodies, however, indicated they had been killed with a blood
agent - that is, a cyanide-based gas - which Iran was known to use. The Iraqis, who are thought
to have used mustard gas in the battle, are not known to have possessed blood agents at the
time.
These facts have long been in the public domain but, extraordinarily, as often as the Halabja
affair is cited, they are rarely mentioned. A much-discussed article in The New Yorker last
March did not make reference to the Defense Intelligence Agency report or consider that Iranian
gas might have killed the Kurds. On the rare occasions the report is brought up, there is
usually speculation, with no proof, that it was skewed out of American political favoritism
toward Iraq in its war against Iran.
I am not trying to rehabilitate the character of Saddam Hussein. He has much to answer for in
the area of human rights abuses. But accusing him of gassing his own people at Halabja as an
act of genocide is not correct, because as far as the information we have goes, all of the
cases where gas was used involved battles. These were tragedies of war. There may be
justifications for invading Iraq, but Halabja is not one of them.

In fact, those who really feel that the disaster at Halabja has bearing on today might want to consider a different question: Why was Iran so keen on taking the town? A closer look may shed light on America's impetus to invade Iraq.

We are constantly reminded that Iraq has perhaps the world's largest reserves of oil. But in a regional and perhaps even geopolitical sense, it may be more important that Iraq has the most extensive river system in the Middle East. In addition to the Tigris and Euphrates, there are the Greater Zab and Lesser Zab rivers in the north of the country. Iraq was covered with irrigation works by the sixth century A.D., and was a granary for the region.

Before the Persian Gulf war, Iraq had built an impressive system of dams and river control projects, the largest being the Darbandikhan dam in the Kurdish area. And it was this dam the Iranians were aiming to take control of when they seized Halabja. In the 1990's there was much discussion over the construction of a so-called Peace Pipeline that would bring the waters of the Tigris and Euphrates south to the parched Gulf states and, by extension, Israel. No progress has been made on this, largely because of Iraqi intransigence. With Iraq in American hands, of course, all that could change.

Thus America could alter the destiny of the Middle East in a way that probably could not be challenged for decades - not solely by controlling Iraq's oil, but by controlling its water.

Even if America didn't occupy the country, once Mr. Hussein's Baath Party is driven from power, many lucrative opportunities would open up for American companies.

All that is needed to get us into war is one clear reason for acting, one that would be generally persuasive. But efforts to link the Iraqis directly to Osama bin Laden have proved inconclusive. Assertions that Iraq threatens its neighbors have also failed to create much resolve; in its present debilitated condition - thanks to United Nations sanctions - Iraq's conventional forces threaten no one.

Perhaps the strongest argument left for taking us to war quickly is that Saddam Hussein has committed human rights atrocities against his people. And the most dramatic case are the accusations about Halabja.

Before we go to war over Halabja, the administration owes the American people the full facts.

And if it has other examples of Saddam Hussein gassing Kurds, it must show that they were not
pro-Iranian Kurdish guerrillas who died fighting alongside Iranian Revolutionary Guards. Until
Washington gives us proof of Saddam Hussein's supposed atrocities, why are we picking on Iraq
on human rights grounds, particularly when there are so many other repressive regimes
Washington supports?

War in the Persian Gulf."

Responding to Bush's speech line by line, lie by lie

An Annotated Critique of President George W. Bush's March 17 Address Preparing the Nation for War

FPIF Middle Eastern Editor, Stephen Zunes, provides an annotated critique of the president's address to the nation about imminent war against Iraq. Given that the Democratic Party leadership in Congress declined to take their traditional opportuntity to offer a formal response, FPIF provides a response to all the president's arguments for
war. Line by line, argument by argument, falsehood by falsehood, Zunes responds to the president.

Stephen Zunes is an associate professor of politics and chair of the Peace & Justice Studies Program at the University of San Francisco.

(Editors' Note: Below is a transcript of President George W. Bush's address to the nation on Monday, March 17, announcing his readiness to order a U.S. invasion of Iraq followed by an analysis highlighting some
of the lies and misleading statements in the speech. Such an overview is
necessary since the Democratic Party leadership in Congress, which has pledged to support the president in the event of war, declined to take their traditional opportunity to offer a formal response. The Green Party, which opposes the war, was not given the opportunity by the networks to respond.)

"My fellow citizens, events in Iraq have now reached the final days of decision. For more than a decade, the United States and other nations have pursued patient and honorable efforts to disarm the Iraqi regime without war."
This is patently false. In 1998, President Bill Clinton successfully pressured UNSCOM director Richard Butler to withdraw inspectors without
authorization from the Secretary General or the Security Council--before
their mission was complete--in order to engage in a four-day heavy

bombing campaign against Iraq. As predicted at the time, this illegal use of military force--combined with revelations that the United States had abused the inspections process for espionage purposes--resulted in the Iraqi government barring the inspectors' return until a reorganized inspections commission known as UNMOVIC commenced inspections last year. UNMOVIC chairman Hans Blix and UN Secretary General Kofi Annan explicitly called upon the United States and the international community to give the inspectors more time to do their job, noting that it would take a number of months before their mission could be completed.

"That regime pledged to reveal and destroy all its weapons of mass destruction as a condition for ending the Persian Gulf War in 1991." Iraq was presented with this demand as part of UN Security Council resolution 687, which mandated Iraqi disarmament of its weapons of mass destruction and related delivery systems. This was a unilateral decree from the Security Council which--while nominally part of the ceasefire agreement--was void of any explicit threat to continue prosecuting the war if Iraq did not agree to the disarmament provisions. It is noteworthy that the demand for Iraqi disarmament in the resolution was put forward within the context of a call for regional disarmament. The United States has refused to encourage any regional disarmament initiative, however, and remains a strong supporter of the Israeli and Pakistani governments, which have advanced nuclear arsenals among other weapons of mass destruction.

"Since then, the world has engaged in 12 years of diplomacy. We have passed more than a dozen resolutions in the United Nations Security Council. We have sent hundreds of weapons inspectors to oversee the disarmament of Iraq. Our good faith has not been returned. The Iraqi regime has used diplomacy as a ploy to gain time and advantage. It has uniformly defied Security Council resolutions demanding full disarmament." Iraq's cooperation has indeed been less than total, but most independent reports--even during UNSCOM's inspections regime between 1991 and 1998--conclude that cooperation was close to 90%. According to UNMOVIC, Iraq's cooperation since inspections resumed last year has been far better.

"Over the years, UN weapon inspectors have been threatened by Iraqi officials, electronically bugged, and systematically deceived." This was not an uncommon practice during the UNSCOM era, but there have been no reports from UNMOVIC of such harassment subsequently.

"Peaceful efforts to disarm the Iraqi regime have failed again and again--because we are not dealing with peaceful men."
Peaceful efforts at disarming Iraq have succeeded in eliminating somewhere between 95% and 100% of Iraq's weapons of mass destruction and
related materiel and delivery systems as a result of UN Security Council
resolution 687 and subsequent resolutions. The determination to go to war despite such success raises serious questions as to whether the United States is governed by peaceful men.

"Intelligence gathered by this and other governments leaves no doubt that the Iraq regime continues to possess and conceal some of the most lethal weapons ever devised."
If the United States really has evidence that the Iraqi government continues to possess and conceal weapons of mass destruction, why has the Bush administration refused to make such evidence public or pass such intelligence on to United Nations inspectors, who have the authority to destroy them?

"This regime has already used weapons of mass destruction against Iraq's
neighbors and against Iraq's people."
Iraq did use chemical weapons against Iranian troops and Kurdish civilians back in the 1980s when Saddam Hussein's regime was being supported by the United States. The Reagan administration covered up for
the Halabja massacre and similar attacks against Kurdish civilians by falsely claiming that it was the Iranians--then the preferred enemy--who
were responsible. In addition, the U.S. Defense Intelligence Agency provided Iraq with U.S. satellite data to help Saddam Hussein's forces locate Iranian troop concentrations in the full knowledge that they were
using chemical weapons. Many of the key components of Iraq's chemical weapons program came from the United States, ostensibly for pesticides as part of taxpayer-funded agricultural subsidies, despite evidence that
these U.S.-manufactured chemicals were probably being diverted for use in illegal chemical weapons.

"The regime has a history of reckless aggression in the Middle East."
This is true, though Iraq's invasion of Iran in 1980 was quietly supported by the U.S. government and ambivalent signals by the U.S. ambassador to Iraq immediately prior to the Iraqi invasion of Kuwait may
have emboldened Saddam Hussein to conquer the sheikdom in 1990. Now, with Iraq's offensive military capability just a fraction of what is was
during that period and an unambiguous resolve by the international community to thwart such future aggression, there is little chance of Iraq invading another country again.

"It has a deep hatred of America and our friends."
Iraq willingly accepted U.S. support during the 1980s. The more belligerent posture of recent years is largely a result of the U.S. destruction of much of the country's military and civilian infrastructure in the 1991 Gulf War, which was supported by a number of other Middle Eastern states with which Iraq had also once collaborated and been on friendly terms. Subsequent U.S.-led sanctions, periodic bombing raids, and invasion threats have resulted in widespread suffering of the population that has intensified anti-American sentiment. Had the United States adopted a more enlightened policy, such deep hatred would likely have not developed.

"And it has aided, trained, and harbored terrorists, including operatives of al Qaeda."
Every independent investigation of every Bush administration claim of a connection between the secular Iraqi government and the Islamist al Qaeda network has found no evidence of any Iraqi aid, training, or harboring of al Qaeda terrorists. According to both published U.S. government reports and independent analyses, Iraq's support for international terrorism--which has always been restricted to secular nationalists like the radical Palestinian Abu Nidal faction--peaked in the 1980s.

"The danger is clear: using chemical, biological or, one day, nuclear weapons, obtained with the help of Iraq, the terrorists could fulfill their stated ambitions and kill thousands or hundreds of thousands of innocent people in our country, or any other. The United States and other nations did nothing to deserve or invite this threat. But we will do everything to defeat it. Instead of drifting along toward tragedy, we will set a course toward safety. Before the day of horror can come, before it is too late to act, this danger will be removed."
The Bush administration has failed to present any evidence that Iraq has the intention to pass on weapons of mass destruction to terrorists, an act that would inevitably lead to a U.S.-led invasion, only in this case with the support of the international community. This is the essence of deterrence, which protected the United States and its allies from Josef Stalin, Mao Zedung, and other leaders as tyrannical and far more powerful militarily than Saddam Hussein. And no country has the right to invade another on some far-fetched scenario that they might do something someday. Ironically, as the CIA has noted in a report released this past

October, Saddam Hussein would not likely use WMDs as a first strike, but
in the case of a U.S. invasion--with nothing to lose and the logic of
deterrence no longer in effect--would be far more likely to use whatever
WMDs he may possess. In other words, a U.S. invasion, rather than
preventing the use of weapons of mass destruction, would be the most
likely--and the only realistic--scenario that such horrible weapons
would be utilized.

"The United States of America has the sovereign authority to use force
in assuring its own national security. That duty falls to me, as
Commander-in-Chief, by the oath I have sworn, by the oath I will keep."
The oath of office also demands that the president uphold and defend the
Constitution of the United States, which forbids such an illegal use of
force. Virtually no international legal authority recognizes such an
invasion as an act of assuring legitimate national security interests.

"Recognizing the threat to our country, the United States Congress voted
overwhelmingly last year to support the use of force against Iraq."
The U.S. Congress--with the support of both the Republican and
Democratic leadership--did authorize the use of force against Iraq.
However, the resolution violates Article I, Section 8 of the U.S.
Constitution which does not allow Congress to grant such open-ended
warmaking authority to the president for an offensive military action.
Only a formal declaration of war in such a situation can be considered
legitimate. Furthermore, Article VI of the Constitution declares that
international treaties to which the United States is a party are to be
treated as supreme law, thereby proscribing Congress from passing any
resolution that violates the UN Charter, such as supporting an invasion
of a sovereign nation. As a result, this resolution is unconstitutional
and thereby invalid.

"America tried to work with the United Nations to address this threat
because we wanted to resolve the issue peacefully. We believe in the
mission of the United Nations."
Then why is the United States violating the UN Charter, which forbids
the use of military force unless a country finds itself under armed
attack or it is explicitly authorized by the UN Security Council? The
mission of the United Nations is to preserve international peace and
security, not to approve the invasion of one country by another.

"One reason the UN was founded after the Second World War was to
confront aggressive dictators, actively and early, before they can
attack the innocent and destroy the peace."

The United States refused to confront Saddam Hussein active and early when he was committing acts of aggression against Iranians and Kurds and opposed decisive action by the United Nations. Iraq's ability to attack the innocent and destroy the peace has already been reduced dramatically through a series of actions by the United Nations, including authorizing the use of force to remove Iraqi occupation forces from Kuwait, placing strict military sanctions against the dictatorship, and overseeing the most aggressive unilateral disarmament effort and inspections regime in history.

"In the case of Iraq, the Security Council did act, in the early 1990s. Under Resolutions 678 and 687--both still in effect--the United States and our allies are authorized to use force in ridding Iraq of weapons of mass destruction. This is not a question of authority, it is a question of will."

The assertion that resolutions 678 and 687 give the United States the right to invade Iraq is patently false. Resolution 678 authorized the use of force to enforce prior UN Security Council resolutions demanding that Iraq remove its occupation forces from Kuwait. Once that was accomplished in late February 1991, the resolution became moot. Resolution 687 called for Iraqi disarmament of weapons of mass destruction and related delivery systems, but--even though it was the most detailed resolution in the history of the United Nations--no enforcement mechanism was specified. According to United Nations Charter, such resolutions can be enforced militarily only if the Security Council as a whole recognizes that a country is in material breach, determines that all non-military means have been exhausted, and specifically authorizes the use of force. The Security Council has not done so subsequent to the passage of resolution 678 in late November 1990.

"Last September, I went to the UN General Assembly and urged the nations of the world to unite and bring an end to this danger. On November 8th, the Security Council unanimously passed Resolution 1441, finding Iraq in material breach of its obligations, and vowing serious consequences if Iraq did not fully and immediately disarm."

True, but it did not authorize the use of force. Article 14 of that

resolution specifically noted that the Security Council would "remain seized of the matter," reiterating that only the Security Council as a whole--not any one member state--has the power to determine whether military force can be legitimately utilized to enforce its resolution.

"Today, no nation can possibly claim that Iraq has disarmed."
There actually are some nations that believe that Iraq has disarmed under the resolutions. Though this is not likely the case, the Bush administration has been unable to present clear evidence to the contrary.

"And it will not disarm so long as Saddam Hussein holds power."
This is sheer speculation. As a dictator who has proven his desire to ruthlessly hold on to power at all costs, he very well could disarm to save his regime. However, the Bush administration has made clear its intention to invade anyway, thereby providing little incentive for Saddam Hussein to do so.

"For the last four-and-a-half months, the United States and our allies have worked within the Security Council to enforce that Council's long-
standing demands. Yet, some permanent members of the Security Council have publicly announced they will veto any resolution that compels the disarmament of Iraq. These governments share our assessment of the danger, but not our resolve to meet it."
Actually, most Security Council members do not believe that Iraq is the
imminent threat that the United States claims it to be, though, if convincing evidence were presented that Iraq indeed posed a threat to international peace and security, a clear majority of the Security Council--including France--have indicated their willingness to authorize
the use of force. A veto of the proposed U.S.-sponsored resolution by France, Russia, and China would probably not have been necessary since the United States was unable--despite enormous pressure, including promises of increased foreign aid, trade preferences, and other incentives--to convince a simple majority of nations on the Council that
it was necessary to take the unprecedented step of authorizing the United States to invade Iraq, overthrow the government, and replace it with one more to its liking.

"Many nations, however, do have the resolve and fortitude to act against
this threat to peace, and a broad coalition is now gathering to enforce
the just demands of the world."
There is nothing close to the broad coalition such as that which joined
the United States in ridding Iraqi occupation forces from Kuwait in 1991, when Iraq clearly did constitute a threat to peace. As of this

writing, only one major power (Great Britain) and two minor powers (Spain and Australia) have offered to send troops. All three of these governments are doing so contrary to the sentiments of the vast majority
of their population and their combined participation still leaves the United States contributing at least 85% of combat forces. As columnist Maureen Dowd noted, since the Bush administration has driven virtually everyone from the schoolyard, it now has to rely on imaginary friends.

"The United Nations Security Council has not lived up to its responsibilities, so we will rise to ours."
In reality, the United Nations Security Council has gone to extraordinary efforts to minimize any threat to peace from Iraq, including authorizing the use of force in 1990 to enforce resolutions requiring an Iraqi withdrawal from occupied Kuwait, the imposition of strict sanctions against Iraq, and the creation of an inspections regime
that has been largely--if not 100%--effective. By contrast, it is not the responsibility of the United States or any country to invade a sovereign nation when it feels like it.

"In recent days, some governments in the Middle East have been doing their part. They have delivered public and private messages urging the dictator to leave Iraq, so that disarmament can proceed peacefully. He has thus far refused. All the decades of deceit and cruelty have now reached an end. Saddam Hussein and his sons must leave Iraq within 48 hours. Their refusal to do so will result in military conflict, commenced at a time of our choosing. For their own safety, all foreign nationals--including journalists and inspectors--should leave Iraq immediately."
President Bush has no authorization to demand that United Nations inspectors or foreign nationals leave Iraq. Nor does he have the right to demand that Saddam Hussein and his sons leave their country. No Security Council resolutions require that Saddam Hussein resign or that
he and any other member of his family go into exile. And neither the United States nor any other country has the right to commence an invasion of another country at the time of its choosing.

"Many Iraqis can hear me tonight in a translated radio broadcast, and I
have a message for them. If we must begin a military campaign, it will be directed against the lawless men who rule your country and not against you."
It is highly likely that a major U.S. military campaign--particularly one with such a heavy reliance on air power and the determination to seize by force a capital city of over five million people--will result in the deaths of thousands of innocent Iraqi civilians.

"As our coalition takes away their power, we will deliver the food and medicine you need."

In large part as a result of the U.S.-led sanctions, there are already severe shortages of food and medicines in Iraq. Strict and mostly equitable rationing have left few Iraqi families with more than a couple
of days' worth of food in storage. It is unlikely that the United States
will be able to supply most Iraqis with the food and medicine they need
in any timely manner.

"We will tear down the apparatus of terror and we will help you to build
a new Iraq that is prosperous and free. In a free Iraq, there will be no
more wars of aggression against your neighbors, no more poison factories, no more executions of dissidents, no more torture chambers and rape rooms."
The fact that the United States has supported scores of regimes--including a number in the Middle East--that have tortured, raped, and murdered dissidents raises serious questions as to whether the Bush administration really supports a free Iraq. The Bush administration's ongoing support of Moroccan occupation forces in Western Sahara, Turkish
occupation forces in northern Cyprus, and Israeli occupation forces in the West Bank, the Gaza Strip, and the Golan Heights raises serious questions as to whether the United States is actually bothered by countries that commit acts of aggression against neighbors. The United States also supports a number of Middle Eastern countries that are believed to have developed chemical weapons, similarly raising questions
as to whether the Bush administration is really worried about "poison factories."

"The tyrant will soon be gone. The day of your liberation is near."
Most Iraqis would certainly welcome the end of Saddam Hussein's regime.
But it is highly questionable whether a Western nation that has already
wrought enormous suffering for the Iraqi people, invades the country, and installs one of its own generals as a provisional military governor
will be seen as an act of liberation or a foreign occupation.

"It is too late for Saddam Hussein to remain in power. It is not too late for the Iraqi military to act with honor and protect your country by permitting the peaceful entry of coalition forces to eliminate weapons of mass destruction."
First, it is hard to imagine any national army--even under the most ruthless of dictators--that would not resist a foreign invasion. Second,
if the United States knows where these alleged weapons of mass

destruction are located, why haven't U.S. government officials informed
UNMOVIC inspectors, who have the authority to destroy them?

"Our forces will give Iraqi military units clear instructions on actions
they can take to avoid being attacked and destroyed. I urge every member
of the Iraqi military and intelligence services, if war comes, do not
fight for a dying regime that is not worth your own life. And all Iraqi
military and civilian personnel should listen carefully to this warning.
In any conflict, your fate will depend on your action. Do not destroy
oil wells, a source of wealth that belongs to the Iraqi people. Do not
obey any command to use weapons of mass destruction against anyone,
including the Iraqi people. War crimes will be prosecuted. War criminals
will be punished. And it will be no defense to say, "I was just
following orders"."
The United States has actively undermined and refused to participate in
the International Criminal Court, which was designed to try and punish
war criminals like Saddam Hussein. As a result, any such trials will
likely be under the tutelage of an occupying American army, which will
be seen by the vast majority of the international community as
illegitimate. For a foreign occupation army to try and punish leaders of
an internationally recognized government--however reprehensible they may
be--is in itself a war crime and would make these thugs martyrs in the
eyes of much of the world.

"Should Saddam Hussein choose confrontation, the American people can
know that every measure has been taken to avoid war, and every measure
will be taken to win it."
Refusing an illegitimate order by a foreign government to surrender
power is not choosing confrontation. And, clearly, the Bush
administration has not taken "every measure to avoid war."

"Americans understand the costs of conflict because we have paid them in
the past. War has no certainty, except the certainty of sacrifice. Yet,
the only way to reduce the harm and duration of war is to apply the full
force and might of our military, and we are prepared to do so. If Saddam
Hussein attempts to cling to power, he will remain a deadly foe until
the end. In desperation, he and terrorists groups might try to conduct
terrorist operations against the American people and our friends.

These
attacks are not inevitable. They are, however, possible."
Then why prosecute and unnecessary and illegal war?

"And this very fact underscores the reason we cannot live under the threat of blackmail. The terrorist threat to America and the world will
be diminished the moment that Saddam Hussein is disarmed."
According to the CIA and other estimates, Iraq has not engaged in any anti-American terrorism since the alleged 1993 assassination attempt against former President George Bush and has already dramatically reduced his support for international terrorism since the 1980s, when the United States was supporting his government. By contrast, most intelligence analyses predict an increase in the terrorist threat to America and its allies should the United States invade Iraq.

"Our government is on heightened watch against these dangers. Just as we
are preparing to ensure victory in Iraq, we are taking further actions to protect our homeland. In recent days, American authorities have expelled from the country certain individuals with ties to Iraqi intelligence services. Among other measures, I have directed additional
security of our airports, and increased Coast Guard patrols of major seaports. The Department of Homeland Security is working closely with the nation's governors to increase armed security at critical facilities
across America. Should enemies strike our country, they would be attempting to shift our attention with panic and weaken our morale with
fear. In this, they would fail. No act of theirs can alter the course or
shake the resolve of this country. We are a peaceful people--yet we're not a fragile people, and we will not be intimidated by thugs and killers. If our enemies dare to strike us, they and all who have aided them, will face fearful consequences."
The chances of the United States being attacked will be greatly increased if the U.S. attacks first. Indeed, if there was any logic behind the madness of 9/11, it was Osama bin Laden's hope that the United States would react in such a way that would only increase the popularity of anti-American extremists. History has shown that the more
the United States has militarized the Middle East, the less secure we have become.

"We are now acting because the risks of inaction would be far greater. In one year, or five years, the power of Iraq to inflict harm on all free nations would be multiplied many times over. With these capabilities, Saddam Hussein and his terrorist allies could choose the moment of deadly conflict when they are strongest. We choose to meet that threat now, where it arises, before it can appear suddenly in our

skies and cities."
Iraq has never threatened to attack the United States nor does it have the ability to attack the United States. That country became a formidable military threat back in the 1980s as a result of support from
industrialized nations like the U.S., Great Britain, France, Germany, and Russia. With a strict military embargo imposed upon the country since 1990, it will be extremely difficult for Iraq to become a military
threat to the United States or any other country.

"The cause of peace requires all free nations to recognize new and undeniable realities. In the 20th century, some chose to appease murderous dictators, whose threats were allowed to grow into genocide and global war. In this century, when evil men plot chemical, biological
and nuclear terror, a policy of appeasement could bring destruction of a
kind never before seen on this earth."
The analogy with Hitler's Germany and other Axis powers is spurious. Germany was the most powerful industrialized country in the world in the
1930s. Iraq, by contrast, is a poor, third-world country that has had most of its military infrastructure destroyed and has been under the strictest military and economic sanctions in world history. The current
UN policy of inspections, sanctions, and the threat of UN-sanctioned war
if Iraq again threatens its neighbors can hardly be considered "appeasement." None of the Axis powers of the 1930s were ever subjected
to such international pressure until they had invaded and occupied dozens of nations in Europe, Asia, and Africa. Iraq has not invaded and
occupied any countries since its six-month occupation of Kuwait in 1990-
91.

"Terrorists and terror states do not reveal these threats with fair notice, in formal declarations--and responding to such enemies only after they have struck first is not self-defense, it is suicide. The security of the world requires disarming Saddam Hussein now."
Essentially, President Bush is saying that a country has the right to invade and occupy another country without any evidence that the targeted
country has the intention, willingness, or ability to strike first. This
would give virtually any country the right to invade any other. Most of
Iraq's neighbors do not consider Iraq to be a threat, either now or in the perceivable future.

"As we enforce the just demands of the world, we will also honor the deepest commitments of our country."
Violating the U.S. Constitution and international legal covenants to which the U.S. government is legally bound is, in reality, a dishonor to
the deepest commitments of the United States.

"Unlike Saddam Hussein, we believe the Iraqi people are deserving and capable of human liberty. And when the dictator has departed, they can set an example to all the Middle East of a vital and peaceful and self-
governing nation."
If the United States really believes the Iraqi people are deserving and
capable of human liberty, then why did the U.S. support Saddam Hussein during the height of his terror? And why are the leading candidates the
United States hopes to install in Baghdad to replace the current dictatorship lacking anything remotely resembling democratic credentials?

"The United States, with other countries, will work to advance liberty and peace in that region."
Then why does the United States support dictatorships in Egypt, Saudi Arabia, Oman, Kuwait, Pakistan, Uzbekistan, and other autocratic regimes? And why does the United States support Moroccan, Israeli, and Turkish occupation forces? Such policies belie any claim of support for
liberty and peace.

"Our goal will not be achieved overnight, but it can come over time. The
power and appeal of human liberty is felt in every life and every land.
And the greatest power of freedom is to overcome hatred and violence, and turn the creative gifts of men and women to the pursuits of peace."
To unleash bombs and missiles on cities, to engage in war-mongering, and
to lie to the American people and the world in order to rationalize such
an invasion is itself a form of hatred and violence.

"That is the future we choose. Free nations have a duty to defend our people by uniting against the violent. And tonight, as we have done before, America and our allies accept that responsibility. Good night, and may God continue to bless America."
And may God forgive President Bush and the congressional leaders of both
parties who are responsible for unleashing such horrific violence against the people of Iraq.

A War Crime or an Act of War?
By STEPHEN C. PELLETIERE

MECHANICSBURG, Pa. - It was no surprise that President Bush, lacking smoking-gun evidence of
Iraq's weapons programs, used his State of the Union address to re-emphasize the moral case for
an invasion: "The dictator who is assembling the world's most dangerous weapons has already
used them on whole villages, leaving thousands of his own citizens dead, blind or disfigured."
The accusation that Iraq has used chemical weapons against its citizens is a familiar part of
the debate. The piece of hard evidence most frequently brought up concerns the gassing of Iraqi
Kurds at the town of Halabja in March 1988, near the end of the eight-year Iran-Iraq war.
President Bush himself has cited Iraq's "gassing its own people," specifically at Halabja, as a
reason to topple Saddam Hussein.
But the truth is, all we know for certain is that Kurds were bombarded with poison gas that day
at Halabja. We cannot say with any certainty that Iraqi chemical weapons killed the Kurds. This
is not the only distortion in the Halabja story.
I am in a position to know because, as the Central Intelligence Agency's senior political
analyst on Iraq during the Iran-Iraq war, and as a professor at the Army War College from 1988
to 2000, I was privy to much of the classified material that flowed through Washington having
to do with the Persian Gulf. In addition, I headed a 1991 Army

investigation into how the
Iraqis would fight a war against the United States; the classified
version of the report went
into great detail on the Halabja affair.
This much about the gassing at Halabja we undoubtedly know: it came
about in the course of a
battle between Iraqis and Iranians. Iraq used chemical weapons to try
to kill Iranians who had
seized the town, which is in northern Iraq not far from the Iranian
border. The Kurdish
civilians who died had the misfortune to be caught up in that
exchange. But they were not
Iraq's main target.
And the story gets murkier: immediately after the battle the United
States Defense Intelligence
Agency investigated and produced a classified report, which it
circulated within the
intelligence community on a need-to-know basis. That study asserted
that it was Iranian gas
that killed the Kurds, not Iraqi gas.
The agency did find that each side used gas against the other in the
battle around Halabja. The
condition of the dead Kurds' bodies, however, indicated they had been
killed with a blood
agent - that is, a cyanide-based gas - which Iran was known to use.
The Iraqis, who are thought
to have used mustard gas in the battle, are not known to have
possessed blood agents at the
time.
These facts have long been in the public domain but, extraordinarily,
as often as the Halabja
affair is cited, they are rarely mentioned. A much-discussed article
in The New Yorker last
March did not make reference to the Defense Intelligence Agency report
or consider that Iranian
gas might have killed the Kurds. On the rare occasions the report is
brought up, there is
usually speculation, with no proof, that it was skewed out of American
political favoritism
toward Iraq in its war against Iran.
I am not trying to rehabilitate the character of Saddam Hussein. He
has much to answer for in
the area of human rights abuses. But accusing him of gassing his own
people at Halabja as an
act of genocide is not correct, because as far as the information we
have goes, all of the
cases where gas was used involved battles. These were tragedies of
war. There may be
justifications for invading Iraq, but Halabja is not one of them.

In fact, those who really feel that the disaster at Halabja has bearing on today might want to consider a different question: Why was Iran so keen on taking the town? A closer look may shed light on America's impetus to invade Iraq.

We are constantly reminded that Iraq has perhaps the world's largest reserves of oil. But in a regional and perhaps even geopolitical sense, it may be more important that Iraq has the most extensive river system in the Middle East. In addition to the Tigris and Euphrates, there are the Greater Zab and Lesser Zab rivers in the north of the country. Iraq was covered with irrigation works by the sixth century A.D., and was a granary for the region.

Before the Persian Gulf war, Iraq had built an impressive system of dams and river control projects, the largest being the Darbandikhan dam in the Kurdish area. And it was this dam the Iranians were aiming to take control of when they seized Halabja. In the 1990's there was much discussion over the construction of a so-called Peace Pipeline that would bring the waters of the Tigris and Euphrates south to the parched Gulf states and, by extension, Israel. No progress has been made on this, largely because of Iraqi intransigence. With Iraq in American hands, of course, all that could change.

Thus America could alter the destiny of the Middle East in a way that probably could not be challenged for decades - not solely by controlling Iraq's oil, but by controlling its water.

Even if America didn't occupy the country, once Mr. Hussein's Baath Party is driven from power, many lucrative opportunities would open up for American companies.

All that is needed to get us into war is one clear reason for acting, one that would be generally persuasive. But efforts to link the Iraqis directly to Osama bin Laden have proved inconclusive. Assertions that Iraq threatens its neighbors have also failed to create much resolve; in its present debilitated condition - thanks to United Nations sanctions - Iraq's conventional forces threaten no one.

Perhaps the strongest argument left for taking us to war quickly is that Saddam Hussein has committed human rights atrocities against his people. And the most dramatic case are the accusations about Halabja.

Before we go to war over Halabja, the administration owes the American people the full facts.

And if it has other examples of Saddam Hussein gassing Kurds, it must show that they were not
pro-Iranian Kurdish guerrillas who died fighting alongside Iranian Revolutionary Guards. Until
Washington gives us proof of Saddam Hussein's supposed atrocities, why are we picking on Iraq
on human rights grounds, particularly when there are so many other repressive regimes
Washington supports?

War in the Persian Gulf."

Responding to Bush's speech line by line, lie by lie

An Annotated Critique of President George W. Bush's March 17 Address Preparing the Nation for War

FPIF Middle Eastern Editor, Stephen Zunes, provides an annotated critique of the president's address to the nation about imminent war against Iraq. Given that the Democratic Party leadership in Congress declined to take their traditional opportuntity to offer a formal response, FPIF provides a response to all the president's arguments for
war. Line by line, argument by argument, falsehood by falsehood, Zunes responds to the president.

Stephen Zunes is an associate professor of politics and chair of the Peace & Justice Studies Program at the University of San Francisco.

(Editors' Note: Below is a transcript of President George W. Bush's address to the nation on Monday, March 17, announcing his readiness to order a U.S. invasion of Iraq followed by an analysis highlighting some
of the lies and misleading statements in the speech. Such an overview is
necessary since the Democratic Party leadership in Congress, which has pledged to support the president in the event of war, declined to take their traditional opportunity to offer a formal response. The Green Party, which opposes the war, was not given the opportunity by the networks to respond.)

"My fellow citizens, events in Iraq have now reached the final days of decision. For more than a decade, the United States and other nations have pursued patient and honorable efforts to disarm the Iraqi regime without war."
This is patently false. In 1998, President Bill Clinton successfully pressured UNSCOM director Richard Butler to withdraw inspectors without
authorization from the Secretary General or the Security Council--before
their mission was complete--in order to engage in a four-day heavy

bombing campaign against Iraq. As predicted at the time, this illegal use of military force--combined with revelations that the United States had abused the inspections process for espionage purposes--resulted in the Iraqi government barring the inspectors' return until a reorganized inspections commission known as UNMOVIC commenced inspections last year. UNMOVIC chairman Hans Blix and UN Secretary General Kofi Annan explicitly called upon the United States and the international community to give the inspectors more time to do their job, noting that it would take a number of months before their mission could be completed.

"That regime pledged to reveal and destroy all its weapons of mass destruction as a condition for ending the Persian Gulf War in 1991." Iraq was presented with this demand as part of UN Security Council resolution 687, which mandated Iraqi disarmament of its weapons of mass destruction and related delivery systems. This was a unilateral decree from the Security Council which--while nominally part of the ceasefire agreement--was void of any explicit threat to continue prosecuting the war if Iraq did not agree to the disarmament provisions. It is noteworthy that the demand for Iraqi disarmament in the resolution was put forward within the context of a call for regional disarmament. The United States has refused to encourage any regional disarmament initiative, however, and remains a strong supporter of the Israeli and Pakistani governments, which have advanced nuclear arsenals among other weapons of mass destruction.

"Since then, the world has engaged in 12 years of diplomacy. We have passed more than a dozen resolutions in the United Nations Security Council. We have sent hundreds of weapons inspectors to oversee the disarmament of Iraq. Our good faith has not been returned. The Iraqi regime has used diplomacy as a ploy to gain time and advantage. It has uniformly defied Security Council resolutions demanding full disarmament." Iraq's cooperation has indeed been less than total, but most independent reports--even during UNSCOM's inspections regime between 1991 and 1998--conclude that cooperation was close to 90%. According to UNMOVIC, Iraq's cooperation since inspections resumed last year has been far better.

"Over the years, UN weapon inspectors have been threatened by Iraqi officials, electronically bugged, and systematically deceived." This was not an uncommon practice during the UNSCOM era, but there have been no reports from UNMOVIC of such harassment subsequently.

"Peaceful efforts to disarm the Iraqi regime have failed again and again--because we are not dealing with peaceful men."
Peaceful efforts at disarming Iraq have succeeded in eliminating somewhere between 95% and 100% of Iraq's weapons of mass destruction and
related materiel and delivery systems as a result of UN Security Council
resolution 687 and subsequent resolutions. The determination to go to war despite such success raises serious questions as to whether the United States is governed by peaceful men.

"Intelligence gathered by this and other governments leaves no doubt that the Iraq regime continues to possess and conceal some of the most lethal weapons ever devised."
If the United States really has evidence that the Iraqi government continues to possess and conceal weapons of mass destruction, why has the Bush administration refused to make such evidence public or pass such intelligence on to United Nations inspectors, who have the authority to destroy them?

"This regime has already used weapons of mass destruction against Iraq's
neighbors and against Iraq's people."
Iraq did use chemical weapons against Iranian troops and Kurdish civilians back in the 1980s when Saddam Hussein's regime was being supported by the United States. The Reagan administration covered up for
the Halabja massacre and similar attacks against Kurdish civilians by falsely claiming that it was the Iranians--then the preferred enemy--who
were responsible. In addition, the U.S. Defense Intelligence Agency provided Iraq with U.S. satellite data to help Saddam Hussein's forces locate Iranian troop concentrations in the full knowledge that they were
using chemical weapons. Many of the key components of Iraq's chemical weapons program came from the United States, ostensibly for pesticides as part of taxpayer-funded agricultural subsidies, despite evidence that
these U.S.-manufactured chemicals were probably being diverted for use in illegal chemical weapons.

"The regime has a history of reckless aggression in the Middle East."
This is true, though Iraq's invasion of Iran in 1980 was quietly supported by the U.S. government and ambivalent signals by the U.S. ambassador to Iraq immediately prior to the Iraqi invasion of Kuwait may
have emboldened Saddam Hussein to conquer the sheikdom in 1990. Now, with Iraq's offensive military capability just a fraction of what is was
during that period and an unambiguous resolve by the international community to thwart such future aggression, there is little chance of Iraq invading another country again.

"It has a deep hatred of America and our friends."
Iraq willingly accepted U.S. support during the 1980s. The more belligerent posture of recent years is largely a result of the U.S. destruction of much of the country's military and civilian infrastructure in the 1991 Gulf War, which was supported by a number of other Middle Eastern states with which Iraq had also once collaborated and been on friendly terms. Subsequent U.S.-led sanctions, periodic bombing raids, and invasion threats have resulted in widespread suffering of the population that has intensified anti-American sentiment. Had the United States adopted a more enlightened policy, such deep hatred would likely have not developed.

"And it has aided, trained, and harbored terrorists, including operatives of al Qaeda."
Every independent investigation of every Bush administration claim of a connection between the secular Iraqi government and the Islamist al Qaeda network has found no evidence of any Iraqi aid, training, or harboring of al Qaeda terrorists. According to both published U.S. government reports and independent analyses, Iraq's support for international terrorism--which has always been restricted to secular nationalists like the radical Palestinian Abu Nidal faction--peaked in the 1980s.

"The danger is clear: using chemical, biological or, one day, nuclear weapons, obtained with the help of Iraq, the terrorists could fulfill their stated ambitions and kill thousands or hundreds of thousands of innocent people in our country, or any other. The United States and other nations did nothing to deserve or invite this threat. But we will do everything to defeat it. Instead of drifting along toward tragedy, we will set a course toward safety. Before the day of horror can come, before it is too late to act, this danger will be removed."
The Bush administration has failed to present any evidence that Iraq has the intention to pass on weapons of mass destruction to terrorists, an act that would inevitably lead to a U.S.-led invasion, only in this case with the support of the international community. This is the essence of deterrence, which protected the United States and its allies from Josef Stalin, Mao Zedung, and other leaders as tyrannical and far more powerful militarily than Saddam Hussein. And no country has the right to invade another on some far-fetched scenario that they might do something someday. Ironically, as the CIA has noted in a report released this past

October, Saddam Hussein would not likely use WMDs as a first strike, but
in the case of a U.S. invasion--with nothing to lose and the logic of
deterrence no longer in effect--would be far more likely to use whatever
WMDs he may possess. In other words, a U.S. invasion, rather than
preventing the use of weapons of mass destruction, would be the most
likely--and the only realistic--scenario that such horrible weapons
would be utilized.

"The United States of America has the sovereign authority to use force
in assuring its own national security. That duty falls to me, as
Commander-in-Chief, by the oath I have sworn, by the oath I will keep."
The oath of office also demands that the president uphold and defend the
Constitution of the United States, which forbids such an illegal use of
force. Virtually no international legal authority recognizes such an
invasion as an act of assuring legitimate national security interests.

"Recognizing the threat to our country, the United States Congress voted
overwhelmingly last year to support the use of force against Iraq."
The U.S. Congress--with the support of both the Republican and
Democratic leadership--did authorize the use of force against Iraq.
However, the resolution violates Article I, Section 8 of the U.S.
Constitution which does not allow Congress to grant such open-ended
warmaking authority to the president for an offensive military action.
Only a formal declaration of war in such a situation can be considered
legitimate. Furthermore, Article VI of the Constitution declares that
international treaties to which the United States is a party are to be
treated as supreme law, thereby proscribing Congress from passing any
resolution that violates the UN Charter, such as supporting an invasion
of a sovereign nation. As a result, this resolution is unconstitutional
and thereby invalid.

"America tried to work with the United Nations to address this threat
because we wanted to resolve the issue peacefully. We believe in the
mission of the United Nations."
Then why is the United States violating the UN Charter, which forbids
the use of military force unless a country finds itself under armed
attack or it is explicitly authorized by the UN Security Council? The
mission of the United Nations is to preserve international peace and
security, not to approve the invasion of one country by another.

"One reason the UN was founded after the Second World War was to
confront aggressive dictators, actively and early, before they can
attack the innocent and destroy the peace."

The United States refused to confront Saddam Hussein active and early when he was committing acts of aggression against Iranians and Kurds and opposed decisive action by the United Nations. Iraq's ability to attack the innocent and destroy the peace has already been reduced dramatically through a series of actions by the United Nations, including authorizing the use of force to remove Iraqi occupation forces from Kuwait, placing strict military sanctions against the dictatorship, and overseeing the most aggressive unilateral disarmament effort and inspections regime in history.

"In the case of Iraq, the Security Council did act, in the early 1990s. Under Resolutions 678 and 687--both still in effect--the United States and our allies are authorized to use force in ridding Iraq of weapons of mass destruction. This is not a question of authority, it is a question of will."

The assertion that resolutions 678 and 687 give the United States the right to invade Iraq is patently false. Resolution 678 authorized the use of force to enforce prior UN Security Council resolutions demanding that Iraq remove its occupation forces from Kuwait. Once that was accomplished in late February 1991, the resolution became moot. Resolution 687 called for Iraqi disarmament of weapons of mass destruction and related delivery systems, but--even though it was the most detailed resolution in the history of the United Nations--no enforcement mechanism was specified. According to United Nations Charter, such resolutions can be enforced militarily only if the Security Council as a whole recognizes that a country is in material breach, determines that all non-military means have been exhausted, and specifically authorizes the use of force. The Security Council has not done so subsequent to the passage of resolution 678 in late November 1990.

"Last September, I went to the UN General Assembly and urged the nations of the world to unite and bring an end to this danger. On November 8th, the Security Council unanimously passed Resolution 1441, finding Iraq in material breach of its obligations, and vowing serious consequences if Iraq did not fully and immediately disarm."

True, but it did not authorize the use of force. Article 14 of that

resolution specifically noted that the Security Council would "remain seized of the matter," reiterating that only the Security Council as a whole--not any one member state--has the power to determine whether military force can be legitimately utilized to enforce its resolution.

"Today, no nation can possibly claim that Iraq has disarmed."
There actually are some nations that believe that Iraq has disarmed under the resolutions. Though this is not likely the case, the Bush administration has been unable to present clear evidence to the contrary.

"And it will not disarm so long as Saddam Hussein holds power."
This is sheer speculation. As a dictator who has proven his desire to ruthlessly hold on to power at all costs, he very well could disarm to save his regime. However, the Bush administration has made clear its intention to invade anyway, thereby providing little incentive for Saddam Hussein to do so.

"For the last four-and-a-half months, the United States and our allies have worked within the Security Council to enforce that Council's long-
standing demands. Yet, some permanent members of the Security Council have publicly announced they will veto any resolution that compels the disarmament of Iraq. These governments share our assessment of the danger, but not our resolve to meet it."
Actually, most Security Council members do not believe that Iraq is the
imminent threat that the United States claims it to be, though, if convincing evidence were presented that Iraq indeed posed a threat to international peace and security, a clear majority of the Security Council--including France--have indicated their willingness to authorize
the use of force. A veto of the proposed U.S.-sponsored resolution by France, Russia, and China would probably not have been necessary since the United States was unable--despite enormous pressure, including promises of increased foreign aid, trade preferences, and other incentives--to convince a simple majority of nations on the Council that
it was necessary to take the unprecedented step of authorizing the United States to invade Iraq, overthrow the government, and replace it with one more to its liking.

"Many nations, however, do have the resolve and fortitude to act against
this threat to peace, and a broad coalition is now gathering to enforce
the just demands of the world."
There is nothing close to the broad coalition such as that which joined
the United States in ridding Iraqi occupation forces from Kuwait in 1991, when Iraq clearly did constitute a threat to peace. As of this

writing, only one major power (Great Britain) and two minor powers (Spain and Australia) have offered to send troops. All three of these governments are doing so contrary to the sentiments of the vast majority
of their population and their combined participation still leaves the United States contributing at least 85% of combat forces. As columnist Maureen Dowd noted, since the Bush administration has driven virtually everyone from the schoolyard, it now has to rely on imaginary friends.

"The United Nations Security Council has not lived up to its responsibilities, so we will rise to ours."
In reality, the United Nations Security Council has gone to extraordinary efforts to minimize any threat to peace from Iraq, including authorizing the use of force in 1990 to enforce resolutions requiring an Iraqi withdrawal from occupied Kuwait, the imposition of strict sanctions against Iraq, and the creation of an inspections regime
that has been largely--if not 100%--effective. By contrast, it is not the responsibility of the United States or any country to invade a sovereign nation when it feels like it.

"In recent days, some governments in the Middle East have been doing their part. They have delivered public and private messages urging the dictator to leave Iraq, so that disarmament can proceed peacefully. He has thus far refused. All the decades of deceit and cruelty have now reached an end. Saddam Hussein and his sons must leave Iraq within 48 hours. Their refusal to do so will result in military conflict, commenced at a time of our choosing. For their own safety, all foreign nationals--including journalists and inspectors--should leave Iraq immediately."
President Bush has no authorization to demand that United Nations inspectors or foreign nationals leave Iraq. Nor does he have the right to demand that Saddam Hussein and his sons leave their country. No Security Council resolutions require that Saddam Hussein resign or that
he and any other member of his family go into exile. And neither the United States nor any other country has the right to commence an invasion of another country at the time of its choosing.

"Many Iraqis can hear me tonight in a translated radio broadcast, and I
have a message for them. If we must begin a military campaign, it will be directed against the lawless men who rule your country and not against you."
It is highly likely that a major U.S. military campaign--particularly one with such a heavy reliance on air power and the determination to seize by force a capital city of over five million people--will result in the deaths of thousands of innocent Iraqi civilians.

"As our coalition takes away their power, we will deliver the food and medicine you need."

In large part as a result of the U.S.-led sanctions, there are already severe shortages of food and medicines in Iraq. Strict and mostly equitable rationing have left few Iraqi families with more than a couple of days' worth of food in storage. It is unlikely that the United States will be able to supply most Iraqis with the food and medicine they need in any timely manner.

"We will tear down the apparatus of terror and we will help you to build a new Iraq that is prosperous and free. In a free Iraq, there will be no more wars of aggression against your neighbors, no more poison factories, no more executions of dissidents, no more torture chambers and rape rooms."

The fact that the United States has supported scores of regimes--including a number in the Middle East--that have tortured, raped, and murdered dissidents raises serious questions as to whether the Bush administration really supports a free Iraq. The Bush administration's ongoing support of Moroccan occupation forces in Western Sahara, Turkish occupation forces in northern Cyprus, and Israeli occupation forces in the West Bank, the Gaza Strip, and the Golan Heights raises serious questions as to whether the United States is actually bothered by countries that commit acts of aggression against neighbors. The United States also supports a number of Middle Eastern countries that are believed to have developed chemical weapons, similarly raising questions as to whether the Bush administration is really worried about "poison factories."

"The tyrant will soon be gone. The day of your liberation is near."

Most Iraqis would certainly welcome the end of Saddam Hussein's regime. But it is highly questionable whether a Western nation that has already wrought enormous suffering for the Iraqi people, invades the country, and installs one of its own generals as a provisional military governor will be seen as an act of liberation or a foreign occupation.

"It is too late for Saddam Hussein to remain in power. It is not too late for the Iraqi military to act with honor and protect your country by permitting the peaceful entry of coalition forces to eliminate weapons of mass destruction."

First, it is hard to imagine any national army--even under the most ruthless of dictators--that would not resist a foreign invasion. Second, if the United States knows where these alleged weapons of mass

destruction are located, why haven't U.S. government officials informed
UNMOVIC inspectors, who have the authority to destroy them?

"Our forces will give Iraqi military units clear instructions on actions
they can take to avoid being attacked and destroyed. I urge every member
of the Iraqi military and intelligence services, if war comes, do not
fight for a dying regime that is not worth your own life. And all Iraqi
military and civilian personnel should listen carefully to this warning.
In any conflict, your fate will depend on your action. Do not destroy
oil wells, a source of wealth that belongs to the Iraqi people. Do not
obey any command to use weapons of mass destruction against anyone,
including the Iraqi people. War crimes will be prosecuted. War criminals
will be punished. And it will be no defense to say, "I was just
following orders"."
The United States has actively undermined and refused to participate in
the International Criminal Court, which was designed to try and punish
war criminals like Saddam Hussein. As a result, any such trials will
likely be under the tutelage of an occupying American army, which will
be seen by the vast majority of the international community as
illegitimate. For a foreign occupation army to try and punish leaders of
an internationally recognized government--however reprehensible they may
be--is in itself a war crime and would make these thugs martyrs in the
eyes of much of the world.

"Should Saddam Hussein choose confrontation, the American people can
know that every measure has been taken to avoid war, and every measure
will be taken to win it."
Refusing an illegitimate order by a foreign government to surrender
power is not choosing confrontation. And, clearly, the Bush
administration has not taken "every measure to avoid war."

"Americans understand the costs of conflict because we have paid them in
the past. War has no certainty, except the certainty of sacrifice. Yet,
the only way to reduce the harm and duration of war is to apply the full
force and might of our military, and we are prepared to do so. If Saddam
Hussein attempts to cling to power, he will remain a deadly foe until
the end. In desperation, he and terrorists groups might try to conduct
terrorist operations against the American people and our friends.

These
attacks are not inevitable. They are, however, possible."
Then why prosecute and unnecessary and illegal war?

"And this very fact underscores the reason we cannot live under the
threat of blackmail. The terrorist threat to America and the world
will
be diminished the moment that Saddam Hussein is disarmed."
According to the CIA and other estimates, Iraq has not engaged in any anti-American terrorism since the alleged 1993 assassination attempt against former President George Bush and has already dramatically reduced his support for international terrorism since the 1980s, when the United States was supporting his government. By contrast, most intelligence analyses predict an increase in the terrorist threat to America and its allies should the United States invade Iraq.

"Our government is on heightened watch against these dangers. Just as
we
are preparing to ensure victory in Iraq, we are taking further actions to protect our homeland. In recent days, American authorities have expelled from the country certain individuals with ties to Iraqi intelligence services. Among other measures, I have directed
additional
security of our airports, and increased Coast Guard patrols of major seaports. The Department of Homeland Security is working closely with the nation's governors to increase armed security at critical
facilities
across America. Should enemies strike our country, they would be attempting to shift our attention with panic and weaken our morale
with
fear. In this, they would fail. No act of theirs can alter the course
or
shake the resolve of this country. We are a peaceful people--yet we're not a fragile people, and we will not be intimidated by thugs and killers. If our enemies dare to strike us, they and all who have aided them, will face fearful consequences."
The chances of the United States being attacked will be greatly increased if the U.S. attacks first. Indeed, if there was any logic behind the madness of 9/11, it was Osama bin Laden's hope that the United States would react in such a way that would only increase the popularity of anti-American extremists. History has shown that the
more
the United States has militarized the Middle East, the less secure we have become.

"We are now acting because the risks of inaction would be far greater. In one year, or five years, the power of Iraq to inflict harm on all free nations would be multiplied many times over. With these capabilities, Saddam Hussein and his terrorist allies could choose the moment of deadly conflict when they are strongest. We choose to meet that threat now, where it arises, before it can appear suddenly in our

skies and cities."
Iraq has never threatened to attack the United States nor does it have the ability to attack the United States. That country became a formidable military threat back in the 1980s as a result of support from
industrialized nations like the U.S., Great Britain, France, Germany, and Russia. With a strict military embargo imposed upon the country since 1990, it will be extremely difficult for Iraq to become a military
threat to the United States or any other country.

"The cause of peace requires all free nations to recognize new and undeniable realities. In the 20th century, some chose to appease murderous dictators, whose threats were allowed to grow into genocide and global war. In this century, when evil men plot chemical, biological
and nuclear terror, a policy of appeasement could bring destruction of a
kind never before seen on this earth."
The analogy with Hitler's Germany and other Axis powers is spurious. Germany was the most powerful industrialized country in the world in the
1930s. Iraq, by contrast, is a poor, third-world country that has had most of its military infrastructure destroyed and has been under the strictest military and economic sanctions in world history. The current
UN policy of inspections, sanctions, and the threat of UN-sanctioned war
if Iraq again threatens its neighbors can hardly be considered "appeasement." None of the Axis powers of the 1930s were ever subjected
to such international pressure until they had invaded and occupied dozens of nations in Europe, Asia, and Africa. Iraq has not invaded and
occupied any countries since its six-month occupation of Kuwait in 1990-
91.

"Terrorists and terror states do not reveal these threats with fair notice, in formal declarations--and responding to such enemies only after they have struck first is not self-defense, it is suicide. The security of the world requires disarming Saddam Hussein now."
Essentially, President Bush is saying that a country has the right to invade and occupy another country without any evidence that the targeted
country has the intention, willingness, or ability to strike first. This
would give virtually any country the right to invade any other. Most of
Iraq's neighbors do not consider Iraq to be a threat, either now or in the perceivable future.

"As we enforce the just demands of the world, we will also honor the deepest commitments of our country."
Violating the U.S. Constitution and international legal covenants to which the U.S. government is legally bound is, in reality, a dishonor to
the deepest commitments of the United States.

"Unlike Saddam Hussein, we believe the Iraqi people are deserving and capable of human liberty. And when the dictator has departed, they can set an example to all the Middle East of a vital and peaceful and self-
governing nation."
If the United States really believes the Iraqi people are deserving and
capable of human liberty, then why did the U.S. support Saddam Hussein during the height of his terror? And why are the leading candidates the
United States hopes to install in Baghdad to replace the current dictatorship lacking anything remotely resembling democratic credentials?

"The United States, with other countries, will work to advance liberty and peace in that region."
Then why does the United States support dictatorships in Egypt, Saudi Arabia, Oman, Kuwait, Pakistan, Uzbekistan, and other autocratic regimes? And why does the United States support Moroccan, Israeli, and Turkish occupation forces? Such policies belie any claim of support for
liberty and peace.

"Our goal will not be achieved overnight, but it can come over time. The
power and appeal of human liberty is felt in every life and every land.
And the greatest power of freedom is to overcome hatred and violence, and turn the creative gifts of men and women to the pursuits of peace."
To unleash bombs and missiles on cities, to engage in war-mongering, and
to lie to the American people and the world in order to rationalize such
an invasion is itself a form of hatred and violence.

"That is the future we choose. Free nations have a duty to defend our people by uniting against the violent. And tonight, as we have done before, America and our allies accept that responsibility. Good night, and may God continue to bless America."
And may God forgive President Bush and the congressional leaders of both
parties who are responsible for unleashing such horrific violence against the people of Iraq.

Actually neither side of the coin is true..... he does/did not exist but yet
he does. Non-believers cannot prove any more than the believers of any fact
regarding the whole issue..... It's kinda like a dog chasing its own tail.

No.... its called "copy and paste" and there is no such thing as taking
ANYTHING out of the bible in or out of context. It is either right or
wrong, not inbetween. Sorry... No change in wording whatsoever on MY
part.

And that is what I cannot stand about Christian hypocrisy..... using
scriptures as a person see's fit. That and, all you have to do is say "I'm
sorry... forgive me" and apparently everything is all hunky-dorey again.

Well.... if you are that weak that an off-topic thread is gonna break ya, then I guess there is no loss for us. Guess that any possible ability to debate even a off-topic thread is above certain individuals. This happens from time to time, (the off-topic thing) and it comes back to normal in a little while.

(This is not directed to any one individual.... just in general)

I can't understand why all this bull about off topic post.
If you want to read radio then read it, if you want to
read the bull then read it. It's not hard to tell which is
which.
I have personally found all the good help I want just
about every time I have asked for help about radios and I
have learned a lot on this list.
I haven't trolled on this group because it seemed that there
wasn't much trolling and I didn't want to bring down the
"List Gods"
So what's all this "Bye" and "I'm leaving" stuff?

If you don't want to read it, DON'T OPEN IT!!!!

Where? I didn't watch television much of the day, so I must have missed that. All I saw was a General talking about pesticides, with a CNN reporter trying hard to twist that into "suspected chemical weapons material." The General corrected the reporter twice ("pesticides, not chemical agents"), yet the reporter continued in his attempts to twist the story (with the CNN show host here stretching it even further). Regardless, what was found could hardly be described as a WMD.

They've been finding "suspected chem weapons", or our sources "say" iraq may use WMD", or our troops "may have found..."
etc. etc etc. all along.

yea, and guess why ...

Qualcomm Inc., located in Issa's hometown of San Diego, owns the majority of
the patents for CDMA and therefore receives the majority of royalties for
CDMA deployments. Qualcomm is not in Issa's district, but the company gave
$5,500 to the congressman's last political campaign.

> the U-S population.

The issue was minorities within the military, not the general population. The military is seeking ways to be as inclusive as possible. Women, for example, are well underrepresented (a minority within the military) with no idea how to effectively address that.

Looking at just race alone, minorities are indeed over represented. The goal seems to be equal representation, not proportion of population - equal numbers of blacks, whites, and others. The same goal extends to rank.

Of course, this is not working perfectly. In some areas, the proportions are heavily twisted. For example, in the E-6 to E-9 ranks, black women outnumber white women more than two to one. White women are finding their careers severely restricted by limited promotion opportunities as black women are given preference in promotions. Since promotion within a given time period is now a requirement for re-enlistment, this situation is pushing more and more white women out of the military, only increasing the disproportionate number of black women in these ranks.

This same mechanism of promotion within a given time period combined with preference given to blacks in promotions is also ending the careers of many white men. In 1999 (the last time I checked), in the E-6 to E-9 ranks, black men were only slightly less then the number of white men in those ranks. As the mechanism described above continues, the process of replacing whites with blacks accelerates.

Regardless, none of this has to do with radio, so I'll leave it at that. A quick answer to a question is one thing, but I didn't expect a discussion as a result.

2410. Re: Pro-43 Strange Problem - NOT Defective!

Newsgroup: rec.radio.scanner
Date: 2003-04-08 07:38:55 UTC
From: Skweezieweezie <noway@thistime.now>
Message-ID: <3sGdne7Td_5Y4Q-jXTWc3A@comcast.com>
Source record: 33274

No defect in your Pro-43. If you are getting 800MHz
police, then your scanner is OK. The scanner uses the
same RF bandpass filter for the entire 800MHz bandplan
in the front-end. If you had problems, you would lose the
ENTIRE 800Mhz band. If you look at the service manual,
you can see the circuitry. (I have the service manual)

Most places have VERY little or no analog cell activity anymore.

You know he is correct DeWayne. There are a lot of us that care about the cross posting to groups that have entirely nothing to do with scanner radios, and unrelated subjects in this group.

Why should we have to dig through the crap to read about the subject group when there are groups that their subjects are related too.

It doesn't matter what name one uses, some people like me don't want all that spam coming to ones email. I made the error and used my real address and I am now on a list where I get 30 to 50 spam emails daily and can't seem to stop it. That was over a year ago and they still continue today.

Now back to scanners.

Hi,

I need a very good directional antenna for the 800 MHz band. The frequency I'm interested in is 866.6 MHz. I need to hear a transmitter that I can just barely hear right now with a wideband discone.

The antenna will be mounted on the roof of a three story building with approximately 150 feet of coax to the receiver. Do I need a pre-amp?

I'd prefer something small, but I don't want to compromise performance for size. I don't mind spending a few hundred dollars for the antenna plus the cost of a rotator, cables, mounting hardware, etc.

Any rotator recommendations?

Should I shop the TV antenna stores, the Ham stores, or the commercial radio outlets?

Thanks!
John

I care too and I think it's wrong, but to be realistic I don't think any
newsgroup is going to be exactly like we desire. I don't have any problem
sorting out what I don't want to read. When I see a thread I find
interesting I mark it. No problem!

That was $275 Canadian. Which is $188 USD.

For $199 USD you can buy a new R2 with blocked frequencies, no interface cable and no software to program it.

Gotta compare apples to apples!

Multi element 800 mhz yagi, and some LMR400 cable, tv rotor will be fine as the elements for 800 are not great in length. If you can hear it using the discone, with the directional yagi and low loss cable it should boom in...

If you need a 6 element yagi I have one for sale cut for 800, or look on ebay, commercial two way radio shops, etc. they're not that hard to find... Good Luck.

Yes, but it must be shipped to your home or business outside the US. You can not take delivery in the US.

2435. 900Mhx Tx help, anyone please??

Newsgroup: rec.radio.scanner
Date: 2003-04-08 18:32:37 UTC
From: FrankRF2@cableone.net
Message-ID: <dc569v4mf8cmrpgsn9k293h0q7ghc54kp4@4ax.com>
Source record: 33151

Hi,

Saturday I jumped at a deal at a garage sale and bought two 5"
Remington monitors ($5 each) thinking the RCA plugs on the back were
Inputs. After getting home and doing some testing it turns out they
are outputs. It has a switch to select input freq C1 and C2. I got
online and found a spec sheet that says,

Transmitter:
Frequency
Input C1: 907MHz ± 0.5MHz
Input C2: 922MHz ± 0.5MHz
Transmission power: 94 dBu (FCC Spec)
Frequency stability: ±1MHz
Harmonic Radiation: <960MHz 46dBu Max(3m)
960MHz 54dBu Max(3m)

I need a video transmitter to hook to the ice-cube camera RCA jack to
send the signal for the 5" to pick up and display.

Any suggestions for who/where I might get a kit or circuit to build
some Tx's??

Thanks in advance.

I am looking for all the parts I need to install the discriminator tap on my BC895XLT.

I would also like to know what wire to use from radio to PC.

I have seen pictures, online, of the tap and all are "mono". The PC has stereo input so do I use a single input or get an adapter from mono to stereo?
thanks
Anthony

There used to be a product on the market called the Rabbit that transmitted audio and video around 917MHz. I had a set and they worked well in a medium-sized house. The Rabbit consisted of a TX unit and RX unit, each with RCA input/output.

John, John, John....

So quick to form an opinion based on the obvious answer. Doesn't that seem a little too easy?

What part of my post did you fail to understand? Was it the F, the R, the A, the N, the C or the E that confused you?

You've found half of your answer - you really have. The french and russians are well aware of our hatred of Saddam, and Bush has a personal reason to hate him - after all, if someone tried to kill your father, wouldn't *you* want that person dead? I would...

Now, gee you can make all this money from Saddam, but dammit, there's all these pesky UN sanctions in the way 'cause he's such a monster... and everytime you try to lift them you get vetoed by the US... now how can you get what you want while getting someone else to do the dirty work?

I'll add another point to ponder for you. Once Saddam is gone and a US friendly government is in place, the UN (including, France, Germany, Russia, China) will all be involved in the rebuilding process. Now it's quiz time class: Who had a vested interest in Iraq *before* the war began? Well, those countries still do and now... gee no more sanctions in their way! How about that?

You said it yourself, this isn't rocket science John.

Not likely... I truly believe that title will ultimately fall to G.W. Bush.
I do not base that statement upon my personal dislike for Bush, but upon the
books of Daniel and Revelation and their description of endtime events.

There you go, just like the Iraqi Mis-Information Minister
Mohammed Saeed al-Sahhaf. I just finished watching three news
channels and saw a number of black military personal. You can't
see very can you? Maybe you need to check with you eye doctor.

You have said what a nice guy you think Saddam is, here is a
little news item that shows just what a great guy he is.

****
Iraqis on the ground have started talking to U.S. troops,
detailing everything from the lack of adequate health care to the
execution of entire families as a means to silence children who
say aloud they don't like Saddam.

Hi there,

Anyone own one of these? I checked on Google.com's groups and only found one reference to anything posted on this scanner (the person who owned it, liked it).

I guess the thing I'd really like to know is, will this expensive scanner soon be made obsolete by digital communications/trunking? The frequencies I'm mainly interested in listening to are the ones that my ham radios won't receive, 470 MHz and above. The AR8200 MarkIII B receives up the 3 GHz. I don't know how much activity there is on the bands above the 23 cm ham bands (1.3 GHz). Anyone have any opinions about this scanner or about scanners of this type in general (non-digital scanners)?

73, Jackie

Actually, the issue was why on television, all the US military are white with no blacks, and just before the war started it was the exact opposite. Not anything about population, or even percentages of any group in the military, but only the percentages of groups in the military according to what is being picked up by television.

Somehow, the blacks are not being used in the war, or there is some sort of bizarre rule that they can not be shown on any television shots.

By their own admission, I can live a life of crime, and as long as on my death bed I ask Jesus for forgiveness, I can go into heaven too.

Or, I could take the case to court, and explain that Jesus/God said that all men are sinners. Therefore, if anyone currently exists in heaven, that means not letting other sinners in would be discrimination and I would sue for damages and emotional distress.

Bush is a born again Christian, an "anti-christ" would more something closer to an "atheist"

But if you meant the word the way most misuse the language do, then we understand.

> I do not base that statement upon my personal dislike for Bush,

> but upon the
> books of Daniel and Revelation and their description of endtime events.

The Bible is a fictional science fiction novel, and Bush is an unfortunate reality.

At least that would answer SOME of the contradictions with the mythology
against observed reality. It would explain why God was able to talk to
humans in the past, and not to anyone living now.

All I can say is, you must not watch much television. I live in Korea, and the only channels I get in English are those that the AFRTS satellite carrys. We have AFN News on about 11 hours a day (they carry ABC, CBS, NBC, MSNBC, FOX News Channel, CNN, and Public Television news) and I see people of all races in those newscasts. Mind you, it's difficult to tell the difference when they use those video phones and/or night vision cameras...

You are playing word games. Women are not a minority. They come in
all ethnicities, last time I checked. You originally claimed falsely
that racial minorities are a majority in the military. By any
accepted definition this is untrue. This discussion has gotten
ridiculous. Thanks for playing, and goodbye.

> than the forgery itself.

Really? I tend to think exactly the opposite: presumably junk intelligence and bogus documents float around all the time. It's just that you hope they get filtered out by competent intelligence professionals as they make their way up the food chain, preferably at some point before the President cites them on TV. No, the troubling thing to me is that they got as far as a PM, a Secretary of State and a President in the first place, so that a PM, a President and a Secretary of State end up citing bad forgeries when making their case for war, and in the case of Powell at least, evidently citing them without ever laying eyes on the things. Oh yeah, and the CIA never saw them until after the President cited them on national TV. Christ, let's put on the red noses and floppy shoes and all pile into the little clown car to take a ride down to see if we can get jobs at State, the CIA or the White House.

Either somebody is goosing the Prez and the Secretary of State and the PM with cheap fakes (which it's not their job to pick out), or the most advanced intelligence services in the world can't, with six months' head start, spot clumsy forgeries the IAEA sniffed out in an afternoon. Take your pick. Neither is reassuring, and identifying the forgers doesn't make it any better.

<snip>

> 2. If Britain faked them, then this is clearly an attempt to discredit the
> United States in the eyes of the world community while gaining *something*
> in return. What does Britain stand to gain from this action? Not enough to
> send the military in on and deal with daily protests in the streets. Some
> cheap oil, but then the US gains more than they do - if Britain wanted to
> screw us, they could do better. I don't think it was them.

I don't get this. First of all, why do you think a state produced them? If reports of their quality are to be believed, you or I could've made them. I'm pretty sure I didn't make them. Did you? But more importantly, what makes you think that whoever did make them was seeking to discredit the United States? That only makes sense if you think the forger intended their forgery to be discovered after the US had accepted then as authentic, and why assume that? How do you create a forgery bad enough that it makes the people accepting it as authentic look like idiots, but on the other hand think it will make it to the President? Unless... that's it! It's an inside job, a

veteran intelligence officer who knows his colleagues are so stupid
none of them will figure out the fake before it lands on the HMS
Resolute and the President cites it before Congress. A brilliant
plan!

Seriously, I assume, absent evidence to the contrary, that a forger
wants whatever he forges to be taken as authentic. If he's a stupid
forger, the forgeries will be bad.

<snip>

Conventional Israeli wisdom, as I understand it, holds that a
strong(ish) Iraq holds Iran in check, and vice-versa, and on that
basis Israel wouldn't seem to have much to gain from a weakened Iraq
-- but this stuff lies well outside my bailiwick. At any rate,
Israeli wisdom of any kind at the government level has become
especially scarce in the recent past, and during that crisis of supply
the conventional wisdom appears to have been supplanted by
unconventional nuttery. Like this, for instance
http://www.israeleconomy.org/strat1.htm , which was prepared for the
incoming Netanyahu adminstration in 1996. Scroll down to the section
headed "Moving to a Traditional Balance of Power Strategy" and read
the part about Iraq. Then scroll down and read the authors' names.
Then go to the State Department and DOD websites and see if you can
find any of those names. Hint: you can. Second hint: Perle, Feith,
Wurmser. Note that 1996 was before Sept 11, 2001. Then recall that
the war in Iraq is part of the post-9/11 War on Terror... or
something. Since we're all into naming operations these days, I
propose calling this "Operation Bait and Switch".

<snip>
> Here's what I think. I think they [the Russians and/or French]
> passed an obvious phoney over on Blair and Bush knowing full
> well they'd be so excited to see it they wouldn't bother
> to verify it.

First of all, Bush and Blair are not intelligence professionals, and
are not in a position to verify anything: that's what they have
intelligence services for. Stuff as bad as these docs are alleged to
be should never get to the President or the PM in the first place,
unless:

a) people in said intelligence agencies want the President or PM to:
i) spread false information
ii) look like idiots
or iii) both

or

b) people in said intelligence agencies pass forgeries up the food chain because they are so incompetent they can't tell they're fake, the result of which is that the President and the PM:

i) spread false information
ii) look like idiots
or iii) both

Second, this scenario seems to presuppose that the war is being conducted for the reasons the respective governments have offered, which, y'know, considering their flimsiness...

> I think they figured we'd take it to the UN (which we did)
> they'd determine it was a fake (which happened) and we'd look like idiots.

Well, the very last part happened at least. As for the rest, somebody pass me my Ockham's razor: I think I need a shave. If fancy were wine you'd be driving the porcelain bus.

> That's why ... the Russians are shaking their nuclear finger at us.

Not happening.

> We screwed up their oil deal.

The amazing thing about this kind of claim, i.e. that the French and Russian govenments are really motivated by grubby mercantile interests, is not that it's not true, because it's perfectly plausible. Rather, it's that the people who make it never seem to want to take the obvious next step and consider whether the United States might not also be acting from similar motives. It just seems never to occur to them. No, you see it's the other guys who do stuff for nasty reasons, but we're just trying to bring 'em demokursy an' fraydum. Call me a cynic, but I don't think states act for reasons like that: states want stuff, and if they can, they go and get it. The rest is PR. And the United States isn't any different.

Maybe not in other cases but with Saddam I would agree. Since he is known to have up to 40 impersonators, in this SPECIFIC case, that would be the only way to prove that he is actually the right one. Logic would also require in this specific situation to have an original sample of his actual DNA for comparision.

As to the first part of the statement, God is a concept, not a fact. It is a perception for those feeling small about themselves and need to form self-justification through an imaginary figure.

> bizarre rule that they can not be shown on any television shots.

The Al-Jazeera Guardian
April 9, 2003

Sources have learned that coalition forces are using blacks to fill craters caused by bombing at the airport in Baghdad. Quoting an unnamed general, "Yeah - we gotta get these runways up and running, and there's all these holes. We don't have any other type of black-top available, so we're taking all the black troops and sort of piling them in the holes and then we just kinda run a dozer over em to flatten it out."
The Al-Jazeera Guardian has been investigating this since an anonymous tip from an Internet newsgroup poster known only as "Johnny".
"We could not believe what we were seeing," said our reporter. "I mean, these infidels were just pushing all of these black people into those holes and running them over. Surely the United Nations must do something about this."
Upon receiving these reports, Hans Blix made a great effort to pass such a resolution, and the vote was unanimous. Enforcement of this resolution is expected to begin sometime in the year 2743, after more resolutions are passed.

Wow. You're getting a better signal in Korea than Johnny is in his
trailer...
By the way - those aren't night-vision shots. They're pictures of our green
troops.

:-)

What a gas. First, the libs want women labled as "minorities" so as to garnish the attention like other "minorities". Then, when they get that recognition, they lambaste people for calling them minorities.

I'm confused...

America didn't seem to mind poison gas
Joost R. Hiltermann IHT Friday, January 17, 2003
Halabja

AMMAN, Jordan In calling for regime change in Iraq, George W. Bush has accused Saddam Hussein of being a man who gassed his own people. Bush is right, of course. The public record shows that Saddam's regime repeatedly spread poisonous gases on Kurdish villages in 1987 and 1988 in an attempt to put down a persistent rebellion.
.
The biggest such attack was against Halabja in March 1988. According to local organizations providing relief to the survivors, some 6,800 Kurds were killed, the vast majority of them civilians.
.
It is a good thing that Bush has highlighted these atrocities by a regime that is more brutal than most. Yet it is cynical to use them as a justification for American plans to terminate the regime. By any measure, the American record on Halabja is shameful.
.
Analysis of thousands of captured Iraqi secret police documents and declassified U.S. government documents, as well as interviews with scores of Kurdish survivors, senior Iraqi defectors and retired U.S. intelligence officers, show (1) that Iraq carried out the attack on Halabja, and (2) that the United States, fully aware it was Iraq, accused Iran, Iraq's enemy in a fierce war, of being partly responsible for the attack. The State Department instructed its diplomats to say that Iran was partly to blame. The result of this stunning act of sophistry was that the international community failed to muster the will to condemn Iraq strongly for an act as heinous as the terrorist strike on the World Trade Center.
.
This was at a time when Iraq was launching what proved to be the final

battles of the war against Iran. Its wholesale use of poison gas against Iranian troops and Iranian Kurdish towns, and its threat to place chemical warheads on the missiles it was lobbing at Tehran, brought Iran to its knees.
.
Iraq had also just embarked on a counterinsurgency campaign, called the Anfal, against its rebellious Kurds. In this effort, too, the regime's resort to chemical weapons gave it a decisive edge, enabling the systematic killing of an estimated 100,000 men, women, and children.
.
The deliberate American prevarication on Halabja was the logical, although probably undesired, outcome of a pronounced six-year tilt toward Iraq, seen as a bulwark against the perceived threat posed by Iran's zealous brand of politicized Islam. The United States began the tilt after Iraq, the aggressor in the war, was expelled from Iranian territory by a resurgent Iran, which then decided to pursue its own, fruitless version of regime change in Baghdad. There was little love for what virtually all of Washington recognized as an unsavory regime, but Iraq was considered the lesser evil. Sealed by National Security Decision Directive 114 in 1983, the tilt included billions of dollars in loan guarantees and other credits to Iraq.
.
Sensing correctly that it had carte blanche, Saddam's regime escalated its resort to gas warfare, graduating to ever more lethal agents. Because of the strong Western animus against Iran, few paid heed. Then came Halabja.
.
Unfortunately for Iraq's sponsors, Iran rushed Western reporters to the blighted town. The horrifying scenes they filmed were presented on prime time television a few days later. Soon Ted Koppel could be seen putting the Iraqi ambassador's feet to the fire on Nightline.
.
In response, the United States launched the "Iran too" gambit. The story was cooked up in the Pentagon, interviews with the principals show. A newly declassified State Department document demonstrates that U.S. diplomats received instructions to press this line with U.S. allies, and to decline to discuss the details.
.
It took seven weeks for the UN Security Council to censure the Halabja attack. Even then, its choice of neutral language (condemning the "continued use of chemical weapons in the conflict between the Islamic Republic of Iran and Iraq," and calling on "both sides to refrain from the future use of chemical weapons") diffused the effect of its belated move. Iraq proceeded to step up its use of gas until the end of the war and even afterward, during the final stage of the Anfal campaign, to devastating effect. When I visited Halabja last spring, the town, razed by successive Iranian and Iraqi occupiers, had been rebuilt, but the physical and psychological wounds remained.
.

Some of those who engineered the tilt today are back in power in the
Bush administration.
.
They have yet to account for their judgment that it was Iran, not
Iraq, that posed the primary threat to the Gulf; for building up Iraq
so that it thought it could invade Kuwait and get away with it; for
encouraging Iraq's weapons of mass destruction programs by giving the
regime a de facto green light on chemical weapons use; and for turning
a blind eye to Iraq's worst atrocities, and then lying about it.
.
The writer is preparing a book on U.S. policy toward Iraq, with
partial support from the Open Society Institute and the MacArthur
Foundation.

.
This was at a time when Iraq was launching what proved to be the final

battles of the war against Iran. Its wholesale use of poison gas against Iranian troops and Iranian Kurdish towns, and its threat to place chemical warheads on the missiles it was lobbing at Tehran, brought Iran to its knees.
.
Iraq had also just embarked on a counterinsurgency campaign, called the Anfal, against its rebellious Kurds. In this effort, too, the regime's resort to chemical weapons gave it a decisive edge, enabling the systematic killing of an estimated 100,000 men, women, and children.
.
The deliberate American prevarication on Halabja was the logical, although probably undesired, outcome of a pronounced six-year tilt toward Iraq, seen as a bulwark against the perceived threat posed by Iran's zealous brand of politicized Islam. The United States began the tilt after Iraq, the aggressor in the war, was expelled from Iranian territory by a resurgent Iran, which then decided to pursue its own, fruitless version of regime change in Baghdad. There was little love for what virtually all of Washington recognized as an unsavory regime, but Iraq was considered the lesser evil. Sealed by National Security Decision Directive 114 in 1983, the tilt included billions of dollars in loan guarantees and other credits to Iraq.
.
Sensing correctly that it had carte blanche, Saddam's regime escalated its resort to gas warfare, graduating to ever more lethal agents. Because of the strong Western animus against Iran, few paid heed. Then came Halabja.
.
Unfortunately for Iraq's sponsors, Iran rushed Western reporters to the blighted town. The horrifying scenes they filmed were presented on prime time television a few days later. Soon Ted Koppel could be seen putting the Iraqi ambassador's feet to the fire on Nightline.
.
In response, the United States launched the "Iran too" gambit. The story was cooked up in the Pentagon, interviews with the principals show. A newly declassified State Department document demonstrates that U.S. diplomats received instructions to press this line with U.S. allies, and to decline to discuss the details.
.
It took seven weeks for the UN Security Council to censure the Halabja attack. Even then, its choice of neutral language (condemning the "continued use of chemical weapons in the conflict between the Islamic Republic of Iran and Iraq," and calling on "both sides to refrain from the future use of chemical weapons") diffused the effect of its belated move. Iraq proceeded to step up its use of gas until the end of the war and even afterward, during the final stage of the Anfal campaign, to devastating effect. When I visited Halabja last spring, the town, razed by successive Iranian and Iraqi occupiers, had been rebuilt, but the physical and psychological wounds remained.
.

Some of those who engineered the tilt today are back in power in the
Bush administration.
.
They have yet to account for their judgment that it was Iran, not
Iraq, that posed the primary threat to the Gulf; for building up Iraq
so that it thought it could invade Kuwait and get away with it; for
encouraging Iraq's weapons of mass destruction programs by giving the
regime a de facto green light on chemical weapons use; and for turning
a blind eye to Iraq's worst atrocities, and then lying about it.
.
The writer is preparing a book on U.S. policy toward Iraq, with
partial support from the Open Society Institute and the MacArthur
Foundation.

America didn't seem to mind poison gas
Joost R. Hiltermann IHT Friday, January 17, 2003
Halabja

AMMAN, Jordan In calling for regime change in Iraq, George W. Bush has accused Saddam Hussein of being a man who gassed his own people. Bush is right, of course. The public record shows that Saddam's regime repeatedly spread poisonous gases on Kurdish villages in 1987 and 1988 in an attempt to put down a persistent rebellion.
.
The biggest such attack was against Halabja in March 1988. According to local organizations providing relief to the survivors, some 6,800 Kurds were killed, the vast majority of them civilians.
.
It is a good thing that Bush has highlighted these atrocities by a regime that is more brutal than most. Yet it is cynical to use them as a justification for American plans to terminate the regime. By any measure, the American record on Halabja is shameful.
.
Analysis of thousands of captured Iraqi secret police documents and declassified U.S. government documents, as well as interviews with scores of Kurdish survivors, senior Iraqi defectors and retired U.S. intelligence officers, show (1) that Iraq carried out the attack on Halabja, and (2) that the United States, fully aware it was Iraq, accused Iran, Iraq's enemy in a fierce war, of being partly responsible for the attack. The State Department instructed its diplomats to say that Iran was partly to blame. The result of this stunning act of sophistry was that the international community failed to muster the will to condemn Iraq strongly for an act as heinous as the terrorist strike on the World Trade Center.
.
This was at a time when Iraq was launching what proved to be the final

battles of the war against Iran. Its wholesale use of poison gas against Iranian troops and Iranian Kurdish towns, and its threat to place chemical warheads on the missiles it was lobbing at Tehran, brought Iran to its knees.
.
Iraq had also just embarked on a counterinsurgency campaign, called the Anfal, against its rebellious Kurds. In this effort, too, the regime's resort to chemical weapons gave it a decisive edge, enabling the systematic killing of an estimated 100,000 men, women, and children.

Hi, does anyone know what frequencies are used for the High definition
digital TV channels?
If so could you post them?
Thanks

I know this is off subject, but there is a lot of good input here. I am posting for a friend, he has a Cobra 146gtl,SSB that was in storage for several years, and he would like to have a 'ballpart' idea of what to ask for the unit on sale.????? From my point of view apperance wise I would say "8 on a scale of 10'. There is NO mobil mount..
He also has two '8 track' Stereo Recorders, brand name ,,,, CRAIG about a 7 or 8 on 'the scale',,,,, the second 8 track recorder is a JVC, on the 'scale' about a 9.
I had 8 track when I was younger, but didn't know until I saw these units that there WERE 8 track recorders ''''outthere''''. I will relay any and all info about the sale value of these three units.
Thanks in advance. cl.

Amen to that, John. I'm disgusted with the coverage by the cable and broadcast news channels. However, my preference is shortwave - my shortwave receiver is now working overtime. Each country obviously has a bias, but at least I hear different viewpoints with some basis in reality.

Huh? Fox with fair and balanced coverage? You have got to be kidding. They are among the worst when it comes to twisting a story. Wait until something happens in your town that is covered by Fox. You'll quickly see how much they twist things to fit their views.

Within the military, and most other government agencies, minorities are broken down by race, sex, ethnic background, and so on (a long list). Women are a minority within the military. One only has to look to see that. If that doesn't convince you, discuss it with the equal opportunity offices of the various military branches or the Pentagon (I don't make the definitions).

> You originally claimed falsely that racial minorities
> are a majority in the military. By any accepted
> definition this is untrue.

I made no reference to race in that claim. Blacks within the military (the overall topic of this thread) are only one minority group. You yourself mentioned one or two others. My comment included all minorities within the military, including some you obviously don't recognize as such.

> This discussion has gotten ridiculous. Thanks for
> playing, and goodbye.

Well, sorry you're leaving so upset about this, Mark. Take care.

America didn't seem to mind poison gas
Joost R. Hiltermann IHT Friday, January 17, 2003
Halabja

AMMAN, Jordan In calling for regime change in Iraq, George W. Bush has accused Saddam Hussein of being a man who gassed his own people. Bush is right, of course. The public record shows that Saddam's regime repeatedly spread poisonous gases on Kurdish villages in 1987 and 1988 in an attempt to put down a persistent rebellion.
.
The biggest such attack was against Halabja in March 1988. According to local organizations providing relief to the survivors, some 6,800 Kurds were killed, the vast majority of them civilians.
.
It is a good thing that Bush has highlighted these atrocities by a regime that is more brutal than most. Yet it is cynical to use them as a justification for American plans to terminate the regime. By any measure, the American record on Halabja is shameful.
.
Analysis of thousands of captured Iraqi secret police documents and declassified U.S. government documents, as well as interviews with scores of Kurdish survivors, senior Iraqi defectors and retired U.S. intelligence officers, show (1) that Iraq carried out the attack on Halabja, and (2) that the United States, fully aware it was Iraq, accused Iran, Iraq's enemy in a fierce war, of being partly responsible for the attack. The State Department instructed its diplomats to say that Iran was partly to blame. The result of this stunning act of sophistry was that the international community failed to muster the will to condemn Iraq strongly for an act as heinous as the terrorist strike on the World Trade Center.
.
This was at a time when Iraq was launching what proved to be the final

battles of the war against Iran. Its wholesale use of poison gas against Iranian troops and Iranian Kurdish towns, and its threat to place chemical warheads on the missiles it was lobbing at Tehran, brought Iran to its knees.
.
Iraq had also just embarked on a counterinsurgency campaign, called the Anfal, against its rebellious Kurds. In this effort, too, the regime's resort to chemical weapons gave it a decisive edge, enabling the systematic killing of an estimated 100,000 men, women, and children.
.
The deliberate American prevarication on Halabja was the logical, although probably undesired, outcome of a pronounced six-year tilt toward Iraq, seen as a bulwark against the perceived threat posed by Iran's zealous brand of politicized Islam. The United States began the tilt after Iraq, the aggressor in the war, was expelled from Iranian territory by a resurgent Iran, which then decided to pursue its own, fruitless version of regime change in Baghdad. There was little love for what virtually all of Washington recognized as an unsavory regime, but Iraq was considered the lesser evil. Sealed by National Security Decision Directive 114 in 1983, the tilt included billions of dollars in loan guarantees and other credits to Iraq.
.
Sensing correctly that it had carte blanche, Saddam's regime escalated its resort to gas warfare, graduating to ever more lethal agents. Because of the strong Western animus against Iran, few paid heed. Then came Halabja.
.
Unfortunately for Iraq's sponsors, Iran rushed Western reporters to the blighted town. The horrifying scenes they filmed were presented on prime time television a few days later. Soon Ted Koppel could be seen putting the Iraqi ambassador's feet to the fire on Nightline.
.
In response, the United States launched the "Iran too" gambit. The story was cooked up in the Pentagon, interviews with the principals show. A newly declassified State Department document demonstrates that U.S. diplomats received instructions to press this line with U.S. allies, and to decline to discuss the details.
.
It took seven weeks for the UN Security Council to censure the Halabja attack. Even then, its choice of neutral language (condemning the "continued use of chemical weapons in the conflict between the Islamic Republic of Iran and Iraq," and calling on "both sides to refrain from the future use of chemical weapons") diffused the effect of its belated move. Iraq proceeded to step up its use of gas until the end of the war and even afterward, during the final stage of the Anfal campaign, to devastating effect. When I visited Halabja last spring, the town, razed by successive Iranian and Iraqi occupiers, had been rebuilt, but the physical and psychological wounds remained.
.

Some of those who engineered the tilt today are back in power in the
Bush administration.
.
They have yet to account for their judgment that it was Iran, not
Iraq, that posed the primary threat to the Gulf; for building up Iraq
so that it thought it could invade Kuwait and get away with it; for
encouraging Iraq's weapons of mass destruction programs by giving the
regime a de facto green light on chemical weapons use; and for turning
a blind eye to Iraq's worst atrocities, and then lying about it.
.
The writer is preparing a book on U.S. policy toward Iraq, with
partial support from the Open Society Institute and the MacArthur
Foundation.

08/04/2003

Akamai Technologies has cancelled its contract with Arabic satellite news channel Al-Jazeera. The company had briefly been providing web server services for the channel's Arabic- and recently launched English-language websites.

The company gave no reason why it had ended its relationship with the network.

Meanwhile, Yahoo is refusing to run advertising from Al-Jazeera due to "war-related sensitivity".

Al-Jazeera has not had much luck in the last few weeks, with massive traffic shutting down the network's websites followed by a wave of pro-war hacking attacks that completely blocked access to the channel's English site, and it 's reporters in Iraq have been denounced by the Iraqi government and bombed by the Americans.

Today the Twenty First Century starts with another blot on our collective soul. America, shining beacon to

the world, the land of democracy, liberty and truth, has just as often shown the world greed, death and

dictatorship.

All too often the United States has betrayed its highest ideals to wage wars of lust and greed. The native

peoples here when the Europeans arrived suffered through war, displacement and genocide because they

had the land and gold we wanted. Mexico owned the Texas and California that were our self-declared

destiny and we took them by force. We have fought Spain, Cuba, Columbia, the Philippines and Hawaii for

control of naval stations and shipping routes. More recently the U.S. has kept tight control of Middle

Eastern oil by propping up dictators in Iran, Iraq, Saudi Arabia, Kuwait, and Pakistan.

The horrific events of 9/11 would make any country tremble. But with the right leadership we could have

shown the world our steady resolve and courage and we could have celebrated an American love and life

and liberty that no airplane could destroy. But President George W. Bush has had uses for terror. For

eighteen months he has beaten the drums of revenge till fear has become a second heartbeat in our

pysche. Simmer America over a low flame of fear and spice it with contempt for the world and you can

bring her and her people to cry hungrily for blood.

By now, most Americans have come to believe that Saddam Hussein was somehow behind 9/11. Like a

schoolboy crossing his fingers behind his back, President Bush has repeatedly hinted at a connection he

knows doesnï¿½t exist. He winks at reporters while he lies to the American people. George W. must have

been listening in class when he read Lincolnï¿½s assurance that you can fool most of the people at least

some of the time. ï¿½Remember 911!ï¿½ has become the rallying cry for this new war, a cry of fear and bullying

ignorance that takes its place in a large collection of presidential demagoguery, right next to ï¿½Remember

the Maine!ï¿½

Yet again America loses herself to this appetite for blood and oil.

Fortunately there are those who remember that this is not our destiny. There are those who know we stand

for more than fear and lust. With every war there have been people who have said No!, sometimes

immediately and sometimes after the glow fades from the advancing armyï¿½s glory. These protesters and

truth-tellers are the true foot-soldiers of American greatness. May God bless the protests, may we shout

out with righteous anger and irredeemable love that our country stands for a greatness that canï¿½t be

measured by our armies.

More than happy to name one, I have a Uniden Bearcat Trunk Tracker II
and could not be happier. One of the main things I like about it is it
can be interfaced to the PC with free and/or chea software. Makes
programming a looooooot easier.

And the one time we were given any proof, it ended up being a forged document
from the US.

During the first Gulf War, it was reported that the sales of SW radios went up. More than a few people realized that to get the news, they would have to listen to other sources. This time the internet is being more used, although many are using the internet to download the streaming SW stations that they have a harder time pulling in with their $49 radio shack specials.

> Huh? Fox with fair and balanced coverage?

He was just being sarcastic. Everyone knows the deal with Fox News.
Besides, when a news source has to tell you every 5 minutes, and end every story with "We are fair and balanced" or "the most trusted name in news" (cnn) a red flag should be shooting up to tell you something is wrong with the source having to tell you that.

Like if a kid comes up to his parents and after every sentence would say something like: "I have not done anything wrong today" or "I didn't take any cookies out of the cookie jar"

We immediately know the kid is up to something. Same with Fox News and CNN.
You don't need to TELL someone if you are fair and balanced if you don't support the war 100%.

> Iraqis on the ground have started talking to U.S. troops,
> detailing everything from the lack of adequate health care

On a recent American television program on A&E, they ran the Biography of Saddam and mentioned what poor shape Iraq was in before Saddam came to power. They mentioned how the economy greatly improved after his taking charge, and how Iraq then had one of the best health care systems in the Middle East.

It was the US sanctions that have been responsible for the lack of food and medicine over the past 12 years causing thousands of deaths. Then after making sure they don't have any food and medicine for 12 years, Bush comes in now with trucks of food and makes it appear he is the hero, when it was them who took the food away in the first place.

That would be like me punching you in the face for 12 years, then all of a sudden I stop punching you and you look to me as a hero and thank me for not punching you any more. (Oh, and blame the 12 years of punching you in the face on Saddam.)

> to the
> execution of entire families

This is being done by the US military.

I've narrowed my search down to either:

Maxrad MYA80612 Series 824-896MHz $144
or
Cushcraft PC8010N Series 824-894MHz $112

Any comments on who is better Maxrad or Cushcraft? I'm interested in
quality construction that's built to last.

I still need to find a good rotator.

Thanks!
John

news:9697f203.0304081955.740d54fc@posting.google.com...

Wow. Truly a pleasure to read something intelligent on usenet...

You're absolutely right Bernie, in addition to my theory there could also be some motives in the CIA and other intelligence agencies to discredit Bush, especially with the presidential election coming next year. The US might also have a desire to see how our military fares in this war. One big live fire excercise where the military can stretch its' legs and test new toys without running much of a risk of heavy losses. If that's true then the question is what is this a "warm up" for?

I think you're on the right track, as am I, and the truth lies where we both are headed Bernie. I think each member of the "free" world is out to grab as much as they can while pointing the finger of accusation at the others. I think this is going to come to a head in the next few years and we are gonna see a global war like no other in history.

As for the Russians though, I woudln't count them out of this just yet. You refuted my statement that they are shaking their nuclear finger at us, and maybe they aren't in the literal sense of the word, but if you pay attention to Putin's statements, the threating posture of the former Soviet Union is very thinly veiled. I suspect when we are done in Iraq and we start making noise at North Korea, the Russians will be much more vocal than they were this time.

Again, just my opinion. I'm not a CIA agent and do not have access to any special information. I'm just really good at reading between lines....

The fact that you are stating that something both exists, and does not exist,
shows the fault in your statement.
Only one can be true.

> Non-believers cannot prove any more than the believers of any fact
> regarding the whole issue.

The fact that a believer can not prove it as fact, tends to prove that it is not
fact.

In everycase of an argument where no one can prove the existence of something,
it is up to the one who claims that something exists, to show proof.

For example:

I claim that a giant 3 ton 500 foot long invisible monster with 17 heads lives
and exists on planet Pluto.

I can not prove my belief, but now watch this..... YOU can NOT disprove that
this monster does NOT exist, can you? Go ahead and PROVE it doesn't exist.
TRY. You can not.

(just as Iraq could not PROVE it did NOT have any more chemical weapons if they
didn't have any more)

If I continue to argue that my monster exists, yet am not able to show any
proof, everyone with an intelligent brain would know I was crazy to believe in
something that no one can ever prove DOES exist!

Would you believe in my monster and worship it just because someone told you
to? This is what idiots do when told to believe in Gods! They have never
been spoken to, or seen, or have been shown anything in reality to prove there
is any God, yet they believe in it because they were TOLD to.

Most would agree that if I can not give any proof of my monster, that in itself
would be PROOF that it does not exist. Because I am not saying something that
would be possible, or normal to believe. People believed that Iraq still had
chemical weapons left from what the US gave them, only because that would not be
something that seems to impossible from reality. If you sad Iraq had a
machine that allowed them to travel through time, then people would say
bullshit, because this is way out of the standards of observed reality to
believe without any proof.

So, unless anyone can show proof of a God that can do impossible physical feats according to observed reality, the intelligent person knows that the lack of proof of this, and the proof that any believers are only believing in the God because they were brought up and told to, not because they themselves witness the God, is enough PROOF to know that this God does not exist.

> .... It's kinda like a dog chasing its own tail.

It is nothing even close to this analogy. It is more like someone believing in my invisible 17 headed monster living on planet pluto.

You can't prove that it does not exist, because I made sure to create him to be something that can not been seen (invisible) and is somewhere where you can not go to check or disprove it. Exactly like God!

God has evolved over human evolution. First Gods were statues. Then people could prove a statue was not a god. Then the Sun became a god. Now we have the intelligence and knowledge to know that the sun is not a god. So God evolved into something that can not been seen, touched, smelled, or observed by any means whatsoever, and is located in such a place that no one can go to and verify, or use the Hubbell telescope to find.

The fact that God has evolved like this over human civilizations, is again PROOF that no God exists.

So then you will have faith and believe in the monster with 17 heads that is 200 feet long and weighs 3 tons and is invisible and can not be touched that is now living on planet pluto in our own solar system?

Don't you even dare ask ME for proof here either, as proof is not required and faith is all that matters.

Now..... Why do you have faith in your God, but not the monster I just told you exists?

> Peace is a Blessing from God {Allah}.

The fact that we never have peace in the world shows then that your God is not blessing us.

> God {Allah} is Strong and Powerful !

Yet unable to show himself to humans or speak to us. Not very strong and powerful after all.

> God {Allah} Bless Our America Fighting Men and Women - Amen

God blesses murderers?

> God's {Allah's} Peace Be with America's HomeLand Defenders.

He have no defenders, only aggressors that leave our homeland to make others defend their homelands from us.

> God {Allah} Watch Over Our America Fighting Men and Women and
> Strengthen their Spirit and Resolve.

Yes oh great God! Help our men and women to kill and slaughter more children in Iraq and Afghanistan today, and all those countries we attack after them. We realize that your commandment to not kill was mistranslated or misinterpreted and that you want us to continue killing in your name, oh great one.

> May God's {Allah's} Peace Be with America's Fallen Warriors and

Too late, their soles now belong to the great Satan that not even God can destroy or get rid of.

> May God's {Allah's} Strength, Kindness, Mercy and Wisdom 'abide' with
> America's Leaders - Amen.

And Hitler too.

> For I Have FAITH and I Believe ~ RHF

Just as you believed Iraq had any of the weapons they told you they didn't have. Now after all those people had to die, we see they don't have them or they would have used them by now, no need to save them to be discovered after they are taken over! If the US takes control of Iraq and is going to find the weapons anyway, might as well use them! But they are not using them. Because they don't have any, just like they said, and just like the UN weapons inspectors said after months of searching. Bush should have told them where to look since he seemed so sure of having proof that they were there. Of course you can't tell the inspectors to look in make-believe fantasy places that don't really exist.

Blind FAITH without proof that Iraq still had chemical weapons was the cause of many needless deaths and murders. So too have many died needlessly in the name of "god" and religion.

The only way to stop war and these murders, is to require proof next time, and not go on blind faith.

Just like how sometimes the war on CNN's financial programs like Lou Dobbs' Moneyline actually talks about the stock market when the war news starts getting slow.

You can't talk about scanners all the time, sometimes there are other more important things to talk about.

2539. Better price for new 780xlt than $270??

Newsgroup: rec.radio.scanner
Date: 2003-04-09 23:05:09 UTC
From: Mike <coachmb@ameritech.net>
Message-ID: <FG1la.2994$kd1.3047858@newssrv26.news.prodigy.com>
Source record: 33053

Does anyone know of a better price for a new 780XLT than $270?

I found this price at Hobby Radio http://www.bearcat1.com/item0011.htm

If you know where I can get a new 780XLT cheaper please let me know.

TIA, Mike

You can run one nonstop for days at a time on a fully charged car battery.
I've been meaning to buy one just for the shack incase of power outages...
Get a car battery and a trickle charger at any automotive parts store and
you'll be good to go. Your 895 should have come with a barrel plug attached
to bare leads - if not these can be purchase for next to nothing at any
radio shack store.

<PCQja.56213$0X.11597335@twister.columbus.rr.com>

The pictures and the truth that Q Q@Q.invalid.com would rather you not have access to. Decide for

yourself.

http://regulareverydaypeople.com/ Lots of links

http://www.robert-fisk.com/iraqwarvictims_mar2003.htm

http://www.robert-fisk.com/articles207.htm

Today the Twenty First Century starts with another blot on our collective soul. America, shining beacon to

the world, the land of democracy, liberty and truth, has just as often shown the world greed, death and

dictatorship.

All too often the United States has betrayed its highest ideals to wage wars of lust and greed. The native

peoples here when the Europeans arrived suffered through war, displacement and genocide because they

had the land and gold we wanted. Mexico owned the Texas and California that were our self-declared

destiny and we took them by force. We have fought Spain, Cuba, Columbia, the Philippines and Hawaii for

control of naval stations and shipping routes. More recently the U.S. has kept tight control of Middle

Eastern oil by propping up dictators in Iran, Iraq, Saudi Arabia, Kuwait, and Pakistan.

The horrific events of 9/11 would make any country tremble. But with the right leadership we could have

shown the world our steady resolve and courage and we could have celebrated an American love and life

and liberty that no airplane could destroy. But President George W. Bush has had uses for terror. For

eighteen months he has beaten the drums of revenge till fear has become a second heartbeat in our

pysche. Simmer America over a low flame of fear and spice it with contempt for the world and you can

bring her and her people to cry hungrily for blood.

By now, most Americans have come to believe that Saddam Hussein was somehow behind 9/11. Like a

schoolboy crossing his fingers behind his back, President Bush has repeatedly hinted at a connection he

knows doesnï¿½t exist. He winks at reporters while he lies to the American people. George W. must have

been listening in class when he read Lincolnï¿½s assurance that you can fool most of the people at least

some of the time. ï¿½Remember 911!ï¿½ has become the rallying cry for this new war, a cry of fear and bullying

ignorance that takes its place in a large collection of presidential demagoguery, right next to ï¿½Remember

the Maine!ï¿½

Yet again America loses herself to this appetite for blood and oil.

Fortunately there are those who remember that this is not our destiny. There are those who know we stand

for more than fear and lust. With every war there have been people who have said No!, sometimes

immediately and sometimes after the glow fades from the advancing armyï¿½s glory. These protesters and

truth-tellers are the true foot-soldiers of American greatness. May God bless the protests, may we shout

out with righteous anger and irredeemable love that our country stands for a greatness that canï¿½t be

measured by our armies.

In peace,
Martin Kelley

>stereo?

I have my Optocom and my AR3000A connectorized so that I can run
either tape out or discriminator into the right channel of my
soundcard's line in.

It works great with every decoder and recorder program I've tried,
including Scanstar Deluxe's Digital Audio Recorder, Microsoft's
Windows Media Encoder, and Wintone.

Cease fire from what war started by who? The US. And don't give us any of that crap about Iraq attacking Kuwait. Saddam told the US his intentions of stopping Kuwait from stealing Iraq's oil with their slant drilling and April Glaspie gave her ok, saying it was none of the US's concern what he did with Kuwait. Sure, and now look who controls and occupies Kuwait, the US.

Anywho, the SANCTIONS are the cause of the lack of food medice and thousands of deaths. Interesting instead of arguing this, you realize it is true, but instead shift the subject to who placed the sanctions.

Who suggested and brought up that sanctions should be placed?
Who always is the only country to veto any sanctions to be placed on Israel every year?

Both have the same answer.

What are you talking about? He is looking for the BC780XLT. I think $270 is
a pretty good price if it's NEW and not reconditioned. Otherwise it's about
right for a used one in really good shape. If used, you should probable
expect a cable and some software with it as well for that kind of money.

>

i have had to visit six different Radio Shacks in my area...
out of six, only two spoke English, only one had clerks willing
to do searches for goods and call other stores, and only one
that was well-stocked...

you have to know what you want at the rat shack you visit...

in my area, there are Pakistanis, Indians, Russians, and
Ethiopians or Nigerians running the stores... one place in a mall
near my house has been run for at least two years by a really
obnoxious Arab woman - don't expect great customer service...

oh, and the stories about clerks being forced to query every
customer about satellite service or cell phones? it is
absolutely true (had a long discussion with a clerk at the one
'good' RS near me)...

RS is going down the tubes - quick... just take a look at its
product lines, lack of parts inventory, focus on limited
lifespans for consumer products - add it all up, and i think
we will see RS folding, absorbed, sold, or somehow transformed
into a different entity...

i'd love to bitch-slap some of the smarmy suits down in
Ft. Worth - they are ruining the store's reputation...

I don't know about the 8-tracks (I have a recorder myself...sitting in the garage attic) but you can probably find come Cobra's on eBay. Spend a couple of weeks looking for that model. If not, look for similarly equipped CB's (I don't know anything about 146GTL). That should give him an idea about what it's worth.

Sell the 8-tracks on eBay for $.99. Someone may or may not bid, but you won't be out much. Make sure you charge actual shipping so you're covered there. If no one buys them, donate them to a charity (Goodwill, DAV, etc.) and take a tax deduction.

whoa whoa.
easy on the racist remarks

i agree that radioshack is going down the tubes.
however i don't agree with your heehaw ideals.

What is the purpose of the United States military?
The large military of the U.S. is not needed for defense. The country has two peaceful and relatively-weak neighbors and hasn't seen an invasion since the War of 1812. On both sides, the United States is buffered by large oceans which make an oversees invasion all but impossible. There is no more invasion-proof country in the world as the United States.

For fifty years, the United States has used its military against much weaker, third world countries like Korea, Vietnam, Panama, Iraq. None of these wars has ever threatened the sovereign borders of the United States. But they have all revolved around access to resources and trading partners.

For example, activists were spotlighting human rights abuses in Saddam Hussein's Iraq for many years prior to the Gulf War. Rather than imposing embargos then, the U.S. government gave monetary and military support to Hussein in his war against Iran. It wasn't until Hussein invaded Kuwait and threatened American petroleum supplies that President Bush started a rhetoric of hate against Hussein, a rhetoric sponsored by American corporate greed.

The U.S. military serves to maintain U.S. control over the world's raw materials. The U.S. government has supported dictatorships (like Saudi Arabia, Indonesia, Zaire) and fought democracies (Chile, Nicaragua) in order to keep the price of raw materials down.

The military also serves domestically as an income-redirecting scheme. The $663 billion dollars that Americans pay in military-related income taxes (see the War Resisters League's Where Your Income Tax Money

Really Goes) is used to support industries that Americans don't need. The assault ships and stealth bombers are expensive toys, and the bill for them goes into the pockets of the military machine's wealthy stockholders.

This money would be better spent on a national health care system, on rebuilding our crumbling industrial infrastructure, and on reducing our taxes. How many have to die to maintain a U.S. standard of living that is based on such oppression? Is cheap gas really worth thousands of lives?

FrontPageMagazine.com | April 9, 2003

Baghdad is liberated. In the days to come let us not forget that if it was not for one man, and one man alone -- George Bush -- the people of Iraq would not be celebrating in the streets and pulling down Saddam's statues today. Instead the jails would still be full and the torture chambers still operating and the weapons mills still turning out the instruments of future destructin. In this war of liberation the liberals appeased the monster regime and the left offered themselves as human shields to be placed in the way of the liberating forces both in Iraq and here at home. My favorite moment this morning came when two Iraqis marched down Baghdad's main street holding a banner that said: "GO HOME, HUMAN SHIELDS: YOU U.S. WANKERS!"

Should we now get ready for apologies? Don't hold your breath. In The Nation today, Medea Benjamin, head of Global Exchange, pro-Castro communist and leader of the anti-American anti-war left, calls for a world-wide effort to send human shields to North Korea, Syria and Iran, the pillars of terrorist power, to give aid and comfort to the enemy.

We have come to a post-Cold War historic turning point. We have entered the era of a new civil war between the forces of freedom and the powers of Islamo-fascist and communist darkness, and once again the left is clearly detemined to take its stand on the other side. The good news is that America is back. Our military has performed superlatively. Our leadership has stood tall. We ourselves can celebrate over this and look confidently towards what lies ahead.

2574. *******BEWARE OF SALES OR TRADING WITH "Mitch Roberston"

Newsgroup: rec.radio.scanner
Date: 2003-04-10 14:32:14 UTC
From: TIA <no1@nowhere.com>
Message-ID: <v9b07cnrif2v18@corp.supernews.com>
Source record: 33089
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.cb,rec.radio.scanner

Ya know I always know better but for some reason this time I didn't heed my own warning. I had advertised a HR2600 with a chipswitch and 2 - 150 amps for sale. One having a preamp switch problem and needed a new switch but the amp side worked perfectly. And I got alot of action but no sales. Well after 2-3 months I got an email from

MITCH N2RADIO [mitch@n2radio.com] MITCHELL Robertson [MR_CPTN@militaryministry.net]

Stating that he had a 6900TB to and an Boomer 600 amp to trade for my stuff. I was like ok, no problem. I got everything packaged up in bubble wrap and boxed real well. And waited for ups to pick it up. And he was to do the same. Well he gave me a tracking number 2 days later and the package was on its way to me. Well mine left and went to him. I triple checked the operation of all the equipment before I packaged it up. Just because I did a trade earlier that month (Sept) and had a DOA problem with a scanner. So I made sure that the equip worked perfectly. Well I found out that Mitch was in the military and was being shipped out. And his family is moving. So they wouldn't be able to get email for some time.

Well the package arrived at completely the wrong address, which was intentional because Mitch and his wife Laura had both double-checked the shipping addy with me. I finally get the package and guess what? Its 3 Chilton's repair manuals no equipment to be found. Well did I get hosed but bad. So over the next 4 months I emailed both addresses well over a hundred times. And no response at all. Well I have a few connections in the military and I'm making some requests. I'll see what happens it should be interesting to say the least. The last email I sent Mitch and his wife I told him this and told him by Jan 1 If I didn't hear anything I would take action. Still no reply!!

Well as I'm typing guess what, I get a box in ups!! SO I open it up and there is my 2600 back and one 150 amp that I sent to him. And a note that the 2600 doesn't receive, the first amp is dead, and he kept the other amp and sent me 2 beat up 15.00 microphones one with an echo. DAM JUNK!! And a mini para dynamics meter DOUBLE JUNK!!! Then he has the balls to throw in a pc board for an amp kit. Well I just wanted EVERYONE to know what happened to me. So if you do business with him BEWARE I warned you.

Robert Mitchell AKA Mitch Robertson AKA deadbeat user

MITCH N2RADIO [mailto:mitch@n2radio.com]

MITCHELL Robertson [MR_CPTN@militaryministry.net]

Address I shipped to:

Mitch Robertson 3612 SODERBERG DR. FT. COLLINS CO. 80526

Address he shipped from:

Art Castings 511 8th St. SE Loveland Colorado 80537

Q: Isn't the Yaesu FT-1500M mobile rig not well suited for Packet (mobile or base w/PS)??
I checked out the specs. and it seems like it would work well . . .
I tried looking for info on APRS, but either the links didn't work or all they talked about for
"system requirements" were the 'software requirements', and not include the 'radio requirements'.

"I guess some people don't have a clue as to what APRS is."
Okay, you got me on that one :-)

Your vaugeness is obfuscating.

The FT-1500 is inexpensive, it works, it's rugged. There are more than just a few being used succesfuly as APRS trackers, I-gates and digipeaters all over the country.

Having been directly responsable for the installation and operation of: a majority of digipeaters in this state, APRS for high-alltitude balloon flights, HamHUDs, TinyTraks-II, I-gates and one of the longer continualy available Tier-2 servers, providing server access for an Antartic weather station - I may have just an idea or two as to what APRS is. At the very least I've made it work for me and many other hams in the area without spending over $200 for a radio.

What is it, exactly, that *you* think APRS is that an FT-1500 isn't a viable radio?

I have an FT-1500 which I use on packet. Works great!

Right now on APRS I'm using a Kantronics data radio DVR-2.
It was cheap at a hamfest, but buying the crystals brought
the cost up.

I agree, the FT-1500 is a great packet/APRS radio.

See: http://www.k7on.com/

AOR AR-5000+3 Receiver - unblocked FULL coverage "DC to Daylight", MINT, with AOR AS-5000 Antenna Switch Module allows up to 4 antennas to be controlled at the front panel, or auto select via memory (2000!) or band plan - NICE!! Receiver, 12V P/S, manual, ant. switch, org box, to your door for $1,595.00 firm, USPS M/O only. Photo at http://www.cox-internet.com/tazman/ar5000.jpg
******* Autek Research QF-1A SSB/CW/AM audio filter, in excellent condition (only mark on it is a small ID name/# engraved in a corner of rear panel). Better than new as it's now got a pwr on LED, a 1/8" speaker input (along with 1/4"), and a auxiliary volume control to save wear and tear on the receiver. New knob even matches the original! Includes operator instructions & full schematic. To your door $50, USPS M/O only. Picture at http://www.cox-internet.com/tazman/autek.jpg.

Check my aBay feedback, username - arkytazman. IF THESE AREN'T SOLD BY 1800 SAT. 4/12/03 THEY GO ON EBAY... (then shpg charges will apply to compensate for commissions)

Thanks! tazman@cox-internet.com 870 741-3368

(If this appears twice, scuse me all to hell, think an earlier one got blitzed)

2593. Icom PCR1000 audio question

Newsgroup: rec.radio.scanner
Date: 2003-04-10 23:54:17 UTC
From: Skipp bought an icom pcr1000 receiver <Illreplybypostingback@yahoo.com>
Message-ID: <b75079$k8u$1@woodrow.ucdavis.edu>
Source record: 33009
Cross-posted to: rec.radio.scanner,rec.radio.amateur.swap,rec.radio.swap

OK Receiver and Scanner Head types.... I've got an Icom PCR1000 audio question to you owners of said beast.

Just got a new one... the Bonito supplied software loads up fine and seems to work pretty well.

My question is about the actual speaker audio which seems to be distorted, poor in quality or just plain bad. I've thumbed through various modes and frequency ranges... the audio just seems to be a garbled sounding voice. Yes the frequency selection works... I can pop in the local police with a honking loud signal, but again the audio seems to distort on peaks regardless of the selected bandwidth (set to 15Khz for typical two-way radio fm).

So I'd like to hear your opinions on the audio if you have an Icom PCR1000. So far, compared to a regular scanner.. the pcr audio is not cutting the mustard.

I couldn't get the supplied Icom software to work and I see there is now and updated version on the Icom web site. My next task is to download and try the lastest Icom supplied software.

The Bonito Software looks nice, but it also appears really "busy." Could just be me...

thanks, I'll read your follow up posts here on the news groups.

cheers
skipp

I hate to promote a Microsoft product, but they do give this one away
for free.

Microsoft's Windows Media Encoder is also easy to set up and run. That
way, people don't need to install Winamp, as they would have to with
shoutcast.

$200 is an improvement over the $300 you were originally asking, but
still!

Anything that old is not going to be reliable. And furthermore, that
model was poorly designed to begin with.

Rather than pawn off junk on some poor sucker, wouldn't it be better
to just throw them away?

Skipp,

I owned one of these radios. It worked great except for one thing...some antennas made it overload the frontend of the radio. If I used my long wire, it was not a good match. I switched to a discone antenna with a whip for HF frequencies and that was an excellent match for the 1000. Just my experience....

I think if you watched the "looters", as a group they were getting what they felt was their due.

You may have noted that there was no fighting, or stealing from each other. Most were grabbing up stupid stuff just to get it.

Compare this with the real looting in California, and these were gentle looters. No rampaging or disorder.

But an expert familiar...
Instead, the official said...
...get diverted," the expert said...
speaking on condition of anonymity.
for years, the official said.
the expert told AP.
...last four months," the expert said.
...and Z," the official added.

Now, I don't doubt that a mistake could have been made from these troops not having the right information, but why is it that these "experts" and "officials" want anonymity? I mean, if they feel they have a credible statement to make, why hide behind that? I think most of us would rather see something like "Professor Walter J. Knowitall, an expert familiar..."
How do you debate with all of these unknown entities, or perform some kind of "litmus test" on their credibility? (By that I mean simply give people an opportunity to check their references, if you will - their education, background, and what makes them an "expert".)
Like I said, errors could be made, especially if these troops are NOT supplied with the information mentioned. But when I read reports like this, I can't help but to replace words like "expert" and "official" with "The Easter Bunny".

Endthewar.org Editorial

by Mike Zmolek

It's the defining moment the media has been waiting for, the toppling of a Stalinesque statue of Saddam Hussein by a smallish (200-300) crowd of cheering, angry Iraqis. Celebrations in Kurdish-controlled cities in northern Iraq were understandably larger and more exuberant. The pent up anger at the brutality of Saddam Hussein's dictatorship will no doubt be on display in US/UK held cities in the days to come, and should not be under-estimated.

The symbolic moment a million Iraqis will never see.

Absent from the celebrations were hundreds of thousands of Iraqi children who died quietly from easily treatable diseases like diarrhea or diphtheria, during twelve years of brutal economic sanctions that turned Iraq's hospitals into houses of mercy for the dying. Many estimate that sanctions claimed the lives of a million and a half Iraqis in all, some estimate over two million.

In 1996 then Secretary of State Madeleine Albright explained on CBS' Sixty Minutes that 500,000 children dying from sanctions were "worth it", worth the cost of containing Saddam "so that American soldiers do not have to go and re-fight the Gulf war." Now that the Gulf War has been re-fought, and thousands more Iraqis have died in battle, in marketplaces and hopitals, it bears asking what it was all "worth" to let Iraqis suffer and die in epic numbers all to "contain" and topple one dictator.

When anti-sanctions activists began hitting Congress hard with statistics, images and arguments for the end of sanctions in the late

'90s, the response they got from the far right in Washington was that it was all "Saddam's fault", often phrased as though Saddam Hussein had chosen to or had himself imposed sanctions on Iraq. A combination of chosen ignorance and denial had set in. The hawks did not even want to look at the numbers; or discuss the impact on the Iraqi people of the $15 billion dollars of supplies and medicines that were kept on hold at the request of the US representative to the UN's 661 committee. In more moderate offices, there was a greater willingness to accept that sanctions were an evil, but no commitment to act, to end the suffering and death caused by sanctions.

In short, Washington left itself no exit strategy on the issue of sanctions; none other than war. Enter the Bush team, who understood that the best defense is a good offense. By threatening to invade Iraq, the 'chickenhawk' gang of Cheney, Wolfowitz and friends managed to spin the Iraq crisis the other way. Like the Taliban, they picked an enemy guilty of gross and indefensible human rights violations. Like the Taliban, they picked an enemy that the US had previously supplied with arms and training, and had once considered a strategic ally, but now branded as 'evil' or 'terrorist'.

The sanctions that were imposed by the UN Security Council on August 6, 1990 set a condition that Iraq should vacate Kuwait. It is doubtful that such a policy would have passed had the Security Council known that the US would destroy much or most of Iraq's civilian infrastructure in the bombing that ensued. It was the bombing that made sanctions extremely lethal, and the Department of Defense knew this would happen. By taking out Iraq's water and sewage treatment plants, bombing Iraq's chlorine production plants (all three) and banning the importation of chlorine as a potential 'dual-use' item under sanctions, Iraq's water supply was quickly contaminated. Forced to drink water contaminated by untreated sewage and multiple water-borne diseases, Iraqi children fell prey to a host of diseases, most of which would be easily treatable, but which could not be treated under the curtailment of medical supplies under the (mostly arbitrary) 'dual-use' restrictions of sanctions. The death rate for Iraqi children soared.

While the US and its close ally in the UK, along with Israel, led the charge for sanctions, the international community as a whole must be faulted for turning their backs and closing their ears to the Iraqi peoples' cry for help, amplified by the voices of a growing anti-sanctions movement by the mid to late 1990s. We should be careful then about making too much of the international rifts that have developed over the threat of invasion, especially between France and the US; for such rifts are more a factor of US and French oil interests than any concern on either side for human rights.

That the Bush administration has managed to take Baghdad with 'merely' a few thousand lives lost (imagine anyone saying that about 9-11) will be celebrated as a major accomplishment, and the gloating has already

begun. Now the progressive movement which championed the human rights of Iraqis suffering under the brutality of both sanctions and dictatorship is being chided for not seeing that liberation flows from the barrel of a gun.

Or does it?

Once the major fighting is over, the political struggle begins. Since its founding in 1917 under British occupation, Iraq has been dominated by a Sunni majority. The Kurdish tribes were seen by the British as too unstable and unpredictable to govern, the Shi'a too likely to align Iraq with Shi'a dominated Iran. The biggest change among the players in Iraqi politics is the name of the occupying power.

The end of the dictatorship of Saddam Hussein opens the door to new possibilities for Iraqis. Ordinary Iraqis who have lost loved ones or who have suffered torture or political imprisonment under the Ba'ath regime have good reason to celebrate 'regime change'. And right now many Iraqis must have tears of sorrow mixed with hope that the end of sanctions is at hand. There are two reasons for this jubilation.

The progressive peace movement must now apply pressure to the Bush administration to live up to its promises of providing humanitarian aid and seeing to it that Iraq is rebuilt. The US has the resources not only to reverse the humanitarian crisis in Iraq, but to transform Iraq's infrastructure and economy to become vibrant and robust. But where Iraq is concerned, the major challenge for the progressive peace movement is to hold the Bush administration to live up to its claims that Iraq will experience democratization.

Does the US really intend to restore Iraq to Iraqi civilian control? A people living under house to house searches, an army acting as police force, and one that does not even speak the local language has a long road to travel toward true liberty, democracy and self-determination. Around the world, US-led coups and invasions has left a trail of dictatorships and oppressive regimes: Chile, Indonesia, Congo-Zaire, Nicaragua. And even the staunchest pro-war advocate should view with skepticism the contracts for rebuilding Iraq's oil fields being given to Dick Cheney's old boss, Halliburton. Congress is already launching a GAO investigation.

The Bush administration only began seriously talking up the 'liberation' line when it became clear that the international community would not support the invasion and was not buying the US's speculation about Iraq's weapons of mass destruction. If the US wants to find evidence of weapons of mass destruction in Iraq, it should seek out the graveyards of hundreds of thousands of children who have died needlessly over the past twelve years from a weapon of mass destruction known as sanctions.

I am having the same problem here as well as a friend also. Have not had much time to play with the PCR-1000 but I have just noticed the distortion on the local ham and law enforecement repeaters. Other modes appear fine and I have copied HF WEFAX out of New Orleans ok using just a group plane mounted two feet directly above the antenna. I will be experimenting with a outdoor mounter discone this weekend. Would anyone know if the distortion is there using Bonito 5.0? I am using 4.5. Interesting to note: the distortion is not there using the Icom supplied software or the PCtalk version. Let's keep this going. I would be most interested in anyone's success in using the PCR-1000 for satellite use. Thanks. pcox, K4AVO (All-Icom)

The computer interface cable most likely goes into the headphone jack,
Don't know any thing about
USB other than some times another cable/ interface may be available
to use with the scanner headphone computer port and the USB slot on
the computer.
I do not know if a adapter is enough, may need a different cable, which
also
my be an after market third party item.
Jim

I prefer traceable pieces of information or - even better - official
documents from credible sources like the ones cited in my .sig.

Having said that, the URL above is great entertainment indeed.

Endthewar.org Editorial

by Mike Zmolek

It's the defining moment the media has been waiting for, the toppling of a Stalinesque statue of Saddam Hussein by a smallish (200-300) crowd of cheering, angry Iraqis. Celebrations in Kurdish-controlled cities in northern Iraq were understandably larger and more exuberant. The pent up anger at the brutality of Saddam Hussein's dictatorship will no doubt be on display in US/UK held cities in the days to come, and should not be under-estimated.

The symbolic moment a million Iraqis will never see.

Absent from the celebrations were hundreds of thousands of Iraqi children who died quietly from easily treatable diseases like diarrhea or diphtheria, during twelve years of brutal economic sanctions that turned Iraq's hospitals into houses of mercy for the dying. Many estimate that sanctions claimed the lives of a million and a half Iraqis in all, some estimate over two million.

In 1996 then Secretary of State Madeleine Albright explained on CBS' Sixty Minutes that 500,000 children dying from sanctions were "worth it", worth the cost of containing Saddam "so that American soldiers do not have to go and re-fight the Gulf war." Now that the Gulf War has been re-fought, and thousands more Iraqis have died in battle, in marketplaces and hopitals, it bears asking what it was all "worth" to let Iraqis suffer and die in epic numbers all to "contain" and topple one dictator.

When anti-sanctions activists began hitting Congress hard with statistics, images and arguments for the end of sanctions in the late

'90s, the response they got from the far right in Washington was that it was all "Saddam's fault", often phrased as though Saddam Hussein had chosen to or had himself imposed sanctions on Iraq. A combination of chosen ignorance and denial had set in. The hawks did not even want to look at the numbers; or discuss the impact on the Iraqi people of the $15 billion dollars of supplies and medicines that were kept on hold at the request of the US representative to the UN's 661 committee. In more moderate offices, there was a greater willingness to accept that sanctions were an evil, but no commitment to act, to end the suffering and death caused by sanctions.

In short, Washington left itself no exit strategy on the issue of sanctions; none other than war. Enter the Bush team, who understood that the best defense is a good offense. By threatening to invade Iraq, the 'chickenhawk' gang of Cheney, Wolfowitz and friends managed to spin the Iraq crisis the other way. Like the Taliban, they picked an enemy guilty of gross and indefensible human rights violations. Like the Taliban, they picked an enemy that the US had previously supplied with arms and training, and had once considered a strategic ally, but now branded as 'evil' or 'terrorist'.

The sanctions that were imposed by the UN Security Council on August 6, 1990 set a condition that Iraq should vacate Kuwait. It is doubtful that such a policy would have passed had the Security Council known that the US would destroy much or most of Iraq's civilian infrastructure in the bombing that ensued. It was the bombing that made sanctions extremely lethal, and the Department of Defense knew this would happen. By taking out Iraq's water and sewage treatment plants, bombing Iraq's chlorine production plants (all three) and banning the importation of chlorine as a potential 'dual-use' item under sanctions, Iraq's water supply was quickly contaminated. Forced to drink water contaminated by untreated sewage and multiple water-borne diseases, Iraqi children fell prey to a host of diseases, most of which would be easily treatable, but which could not be treated under the curtailment of medical supplies under the (mostly arbitrary) 'dual-use' restrictions of sanctions. The death rate for Iraqi children soared.

While the US and its close ally in the UK, along with Israel, led the charge for sanctions, the international community as a whole must be faulted for turning their backs and closing their ears to the Iraqi peoples' cry for help, amplified by the voices of a growing anti-sanctions movement by the mid to late 1990s. We should be careful then about making too much of the international rifts that have developed over the threat of invasion, especially between France and the US; for such rifts are more a factor of US and French oil interests than any concern on either side for human rights.

That the Bush administration has managed to take Baghdad with 'merely' a few thousand lives lost (imagine anyone saying that about 9-11) will be celebrated as a major accomplishment, and the gloating has already

begun. Now the progressive movement which championed the human rights of Iraqis suffering under the brutality of both sanctions and dictatorship is being chided for not seeing that liberation flows from the barrel of a gun.

Or does it?

Once the major fighting is over, the political struggle begins. Since its founding in 1917 under British occupation, Iraq has been dominated by a Sunni majority. The Kurdish tribes were seen by the British as too unstable and unpredictable to govern, the Shi'a too likely to align Iraq with Shi'a dominated Iran. The biggest change among the players in Iraqi politics is the name of the occupying power.

The end of the dictatorship of Saddam Hussein opens the door to new possibilities for Iraqis. Ordinary Iraqis who have lost loved ones or who have suffered torture or political imprisonment under the Ba'ath regime have good reason to celebrate 'regime change'. And right now many Iraqis must have tears of sorrow mixed with hope that the end of sanctions is at hand. There are two reasons for this jubilation.

The progressive peace movement must now apply pressure to the Bush administration to live up to its promises of providing humanitarian aid and seeing to it that Iraq is rebuilt. The US has the resources not only to reverse the humanitarian crisis in Iraq, but to transform Iraq's infrastructure and economy to become vibrant and robust. But where Iraq is concerned, the major challenge for the progressive peace movement is to hold the Bush administration to live up to its claims that Iraq will experience democratization.

Does the US really intend to restore Iraq to Iraqi civilian control? A people living under house to house searches, an army acting as police force, and one that does not even speak the local language has a long road to travel toward true liberty, democracy and self-determination. Around the world, US-led coups and invasions has left a trail of dictatorships and oppressive regimes: Chile, Indonesia, Congo-Zaire, Nicaragua. And even the staunchest pro-war advocate should view with skepticism the contracts for rebuilding Iraq's oil fields being given to Dick Cheney's old boss, Halliburton. Congress is already launching a GAO investigation.

The Bush administration only began seriously talking up the 'liberation' line when it became clear that the international community would not support the invasion and was not buying the US's speculation about Iraq's weapons of mass destruction. If the US wants to find evidence of weapons of mass destruction in Iraq, it should seek out the graveyards of hundreds of thousands of children who have died needlessly over the past twelve years from a weapon of mass destruction known as sanctions.

The US and its coalition still haven't found any chemical or biological weapons as of April 11th 2003. Iraq did disarm but they were invaded anyway.

Can we say the same about the biggest producers of weapons of mass destruction, (the US)? Why doesn't the US practice what it preaches and disarm itself?

I thought it was to discuss scanners. I'm a scanner listener, but if I'm interested in banjo production in the south during the 1950's, is it appropriate to post about it here? No!

Is this post appropriate here? No.

There are political newsgroups. These jackoffs that are talking about the war should take it there. My kill file grows bigger and bigger every day.

Your post is too broad. Is there a range of frequencies you want to listen to,
or do you just want to be able to hear the normal range of frequencies (from
30mhz - 900 mhz)? How far away do you want to hear? What types of systems will
you listen to (simplex or repeaters)?

You can always buy a scanner antenna that is optimized for a particular portion
of the band, like one for the 150 mhz area, which is where a lot of public
safety stuff is at, or you can buy a general coverage antenna like a rubber
duck for the handheld, a basic scanner mobile antenna from Radio Shack and a
discone antenna for home use.

Ordinary Iraqis who have lost loved ones or who have suffered torture or political imprisonment under the Ba'ath regime have good reason to celebrate 'regime change'. And right now many Iraqis must have tears of sorrow mixed with hope that the end of sanctions is at hand. There are two reasons for this jubilation.

The progressive peace movement must now apply pressure to the Bush administration to live up to its promises of providing humanitarian aid and seeing to it that Iraq is rebuilt. The US has the resources not only to reverse the humanitarian crisis in Iraq, but to transform Iraq's infrastructure and economy to become vibrant and robust. But where Iraq is concerned, the major challenge for the progressive peace movement is to hold the Bush administration to live up to its claims that Iraq will experience democratization.

Does the US really intend to restore Iraq to Iraqi civilian control? A people living under house to house searches, an army acting as police force, and one that does not even speak the local language has a long road to travel toward true liberty, democracy and self-determination. Around the world, US-led coups and invasions has left a trail of dictatorships and oppressive regimes: Chile, Indonesia, Congo-Zaire, Nicaragua. And even the staunchest pro-war advocate should view with skepticism the contracts for rebuilding Iraq's oil fields being given to Dick Cheney's old boss, Halliburton. Congress is already launching a GAO investigation.

The Bush administration only began seriously talking up the 'liberation' line when it became clear that the international community would not support the invasion and was not buying the US's speculation about Iraq's weapons of mass destruction. If the US wants to find evidence of weapons of mass destruction in Iraq, it should seek out the graveyards of hundreds of thousands of children who have died needlessly over the past twelve years from a weapon of mass destruction known as sanctions.

You take a fairly simplistic view on this, and have yourself fallen to the drivel of those that are opposed to actions in Iraq. I'm not here to cast stones, but only to respond to your allegations that are based on a (deliberate?) simplification, if not abbreviation, of US policy.
The WMD issue was never the sole basis for the actions in Iraq, and wasn't stated to be so. The United States policy toward Iraq was clearly stated by Edward P. Djerejian, the Director of the Baker Institute For Public Policy, at Rice University. It was presented at the IISS/CEPS European Security Forum Meeting in Brussels on September 9, 2002.

"The U.S. decision to refocus the world's attention on Iraq and the threat it poses to international peace and security under Saddam Hussein results from the ongoing adjustment of U.S. strategy as a consequence of the attacks of 11 September 2001. The U.S. is leading the campaign against global terrorism - a campaign that can only be won by successful international coalition building. For some time before 11 September, the nexus between weapons of mass destruction (WMD) and terrorist groups and states that support terrorism had been identified as the major strategic threat. This definition is at the core of the new U.S. strategy. Due to the nature of this threat, this definition has also given rise to the concept of pre-emptive strikes, and it has implications for the established policies of containment and deterrence. For building and sustaining effective coalitions, the U.S. will have to work with its allies and partners to build on these changes of its national security strategy for the needed elaboration of an international strategic framework and agreed policy for dealing with the threat."

As the formulation of the Administration's policy on Iraq was evolving, a range of positions on the approach to Iraq has been expressed up to the summer of 2002 among Bush Administration officials. President George W. Bush himself established the link between Iraq and terrorism by stressing the need to deny sanctuary to terrorists anywhere in the world [1] and pointing to the totalitarian threat posed by state sponsors of terrorism with potential access to weapons of mass destruction.[2] He also declared that it was the stated policy of his government to have regime change in Iraq,[3] as U.S. legislation indeed calls for since 1998, believing that unlawful aggression and the pursuit of weapons of mass destruction are the essence of Saddam Hussein's rule and would not end as long as he was in power. However, Bush put the issue of full compliance with UN decisions on the dismantlement of Iraq's weapons of mass destruction programs at the center of his international efforts vis-�-vis Iraq, insisting that the issue here is not inspections but disarmament.[4] On September 15, President Bush will be addressing the subject of Iraq in a major speech at the United Nations.

At the same time, Vice-President Richard Cheney advocated determined U.S. leadership to force Saddam Hussein from power in his remarks before a veterans group in Nashville in August 2002. Cheney said that old security doctrines did not apply in the new strategic environment. Containment was not possible when dictators obtained weapons of mass destruction and were prepared to share them with terrorists who intend to inflict catastrophic casualties on the United States. He also claimed that "many of us are convinced that Saddam Hussein will acquire nuclear weapons fairly soon". A tentative U.S. approach to Iraq would mean that Saddam would simply be emboldened, and it would be even harder to assemble friends and allies to oppose him. In a post- Saddam world, however, moderates in the region would take heart and extremists would rethink their commitment to Jihad, and the broader cause of Middle East peace would be advanced. Cheney assured his audience that the Bush Administration would not simply look away, hope for the best and leave the matter for some future administration. He also promised that the U.S. would not turn its back on Iraq after Saddam's departure but would stay to help it rebuild with "territorial integrity" and to craft a democratic, pluralistic, ethnically representative government.

Secretary of State Colin Powell highlighted the need for the United States to lead the international community in its approach toward Iraq and build international support. He stressed the role of the UN Security Council and WMD inspectors as a first step toward enforcing compliance and disarmament on Saddam Hussein and his regime, with serious consequences if he does not comply.

NOTES

[1] "We have entered the second stage of the war on terror - a sustained campaign to deny sanctuary to terrorists who would threaten our citizens from anywhere in the world." (Remarks by President Bush at The White House, March 11, 2002).

[2] "The evil that has formed against us has been termed the new totalitarian threat. The authors of terror are seeking nuclear, chemical and biological weapons. Regimes that sponsor terror are developing these weapons and the missiles to deliver them. If these regimes and their terrorist allies were to perfect these capabilities, no inner voice of reason, no hint of conscience would prevent their use." (Speech by President Bush at the German Bundestag, May 23, 2002.)

[3] Press conference by President Bush, July 8, 2002.

[4] President Bush speaking to congressional leaders on Iraq, September 4, 2002.

Endthewar.org Editorial

by Mike Zmolek

It's the defining moment the media has been waiting for, the toppling of a Stalinesque statue of Saddam Hussein by a smallish (200-300) crowd of cheering, angry Iraqis. Celebrations in Kurdish-controlled cities in northern Iraq were understandably larger and more exuberant. The pent up anger at the brutality of Saddam Hussein's dictatorship will no doubt be on display in US/UK held cities in the days to come, and should not be under-estimated.

The symbolic moment a million Iraqis will never see.

Absent from the celebrations were hundreds of thousands of Iraqi children who died quietly from easily treatable diseases like diarrhea or diphtheria, during twelve years of brutal economic sanctions that turned Iraq's hospitals into houses of mercy for the dying. Many estimate that sanctions claimed the lives of a million and a half Iraqis in all, some estimate over two million.

In 1996 then Secretary of State Madeleine Albright explained on CBS' Sixty Minutes that 500,000 children dying from sanctions were "worth it", worth the cost of containing Saddam "so that American soldiers do not have to go and re-fight the Gulf war." Now that the Gulf War has been re-fought, and thousands more Iraqis have died in battle, in marketplaces and hopitals, it bears asking what it was all "worth" to let Iraqis suffer and die in epic numbers all to "contain" and topple one dictator.

When anti-sanctions activists began hitting Congress hard with statistics, images and arguments for the end of sanctions in the late '90s, the response they got from the far right in Washington was that

it was all "Saddam's fault", often phrased as though Saddam Hussein had chosen to or had himself imposed sanctions on Iraq. A combination of chosen ignorance and denial had set in. The hawks did not even want to look at the numbers; or discuss the impact on the Iraqi people of the $15 billion dollars of supplies and medicines that were kept on hold at the request of the US representative to the UN's 661 committee. In more moderate offices, there was a greater willingness to accept that sanctions were an evil, but no commitment to act, to end the suffering and death caused by sanctions.

In short, Washington left itself no exit strategy on the issue of sanctions; none other than war. Enter the Bush team, who understood that the best defense is a good offense. By threatening to invade Iraq, the 'chickenhawk' gang of Cheney, Wolfowitz and friends managed to spin the Iraq crisis the other way. Like the Taliban, they picked an enemy guilty of gross and indefensible human rights violations. Like the Taliban, they picked an enemy that the US had previously supplied with arms and training, and had once considered a strategic ally, but now branded as 'evil' or 'terrorist'.

The sanctions that were imposed by the UN Security Council on August 6, 1990 set a condition that Iraq should vacate Kuwait. It is doubtful that such a policy would have passed had the Security Council known that the US would destroy much or most of Iraq's civilian infrastructure in the bombing that ensued. It was the bombing that made sanctions extremely lethal, and the Department of Defense knew this would happen. By taking out Iraq's water and sewage treatment plants, bombing Iraq's chlorine production plants (all three) and banning the importation of chlorine as a potential 'dual-use' item under sanctions, Iraq's water supply was quickly contaminated. Forced to drink water contaminated by untreated sewage and multiple water-borne diseases, Iraqi children fell prey to a host of diseases, most of which would be easily treatable, but which could not be treated under the curtailment of medical supplies under the (mostly arbitrary) 'dual-use' restrictions of sanctions. The death rate for Iraqi children soared.

While the US and its close ally in the UK, along with Israel, led the charge for sanctions, the international community as a whole must be faulted for turning their backs and closing their ears to the Iraqi peoples' cry for help, amplified by the voices of a growing anti-sanctions movement by the mid to late 1990s. We should be careful then about making too much of the international rifts that have developed over the threat of invasion, especially between France and the US; for such rifts are more a factor of US and French oil interests than any concern on either side for human rights.

That the Bush administration has managed to take Baghdad with 'merely' a few thousand lives lost (imagine anyone saying that about 9-11) will be celebrated as a major accomplishment, and the gloating has already begun. Now the progressive movement which championed the human rights

of Iraqis suffering under the brutality of both sanctions and dictatorship is being chided for not seeing that liberation flows from the barrel of a gun.

Or does it?

Once the major fighting is over, the political struggle begins. Since its founding in 1917 under British occupation, Iraq has been dominated by a Sunni majority. The Kurdish tribes were seen by the British as too unstable and unpredictable to govern, the Shi'a too likely to align Iraq with Shi'a dominated Iran. The biggest change among the players in Iraqi politics is the name of the occupying power.

The end of the dictatorship of Saddam Hussein opens the door to new possibilities for Iraqis. Ordinary Iraqis who have lost loved ones or who have suffered torture or political imprisonment under the Ba'ath regime have good reason to celebrate 'regime change'. And right now many Iraqis must have tears of sorrow mixed with hope that the end of sanctions is at hand. There are two reasons for this jubilation.

The progressive peace movement must now apply pressure to the Bush administration to live up to its promises of providing humanitarian aid and seeing to it that Iraq is rebuilt. The US has the resources not only to reverse the humanitarian crisis in Iraq, but to transform Iraq's infrastructure and economy to become vibrant and robust. But where Iraq is concerned, the major challenge for the progressive peace movement is to hold the Bush administration to live up to its claims that Iraq will experience democratization.

Does the US really intend to restore Iraq to Iraqi civilian control? A people living under house to house searches, an army acting as police force, and one that does not even speak the local language has a long road to travel toward true liberty, democracy and self-determination. Around the world, US-led coups and invasions has left a trail of dictatorships and oppressive regimes: Chile, Indonesia, Congo-Zaire, Nicaragua. And even the staunchest pro-war advocate should view with skepticism the contracts for rebuilding Iraq's oil fields being given to Dick Cheney's old boss, Halliburton. Congress is already launching a GAO investigation.

The Bush administration only began seriously talking up the 'liberation' line when it became clear that the international community would not support the invasion and was not buying the US's speculation about Iraq's weapons of mass destruction. If the US wants to find evidence of weapons of mass destruction in Iraq, it should seek out the graveyards of hundreds of thousands of children who have died needlessly over the past twelve years from a weapon of mass destruction known as sanctions.

Hello,
Do you know how to make an computer interface cable to link this scanner
with a serial PC port? It's not very easy to find ERW-4C interface.
Alinco's internet site say that a simple electric connection cable may
not work properly.
Thank's

Amicalement,
Belon

Hi,

I purchased a Maxrad 866 MHz yagi antenna. It should arrive next week.

I now need some coax. I need a piece that is 50' to run from the roof to the penthouse (where the lightening arrestors are). Then I need another 75' to get from the penthouse to the lab.

I have heard ecoflex 15 is good. What are your thoughts? I'm a coax dummy.

Once I select the coax I'll know what specs I need in a LNA that will be mounted on the mast with the antenna.

Thanks!
John

What's good software to use with the BC780XLT?
I want something that's easy to use. I have Unitrol for my 895, I want
something else I can use, NOT Trunk Manager.
anything out there?

Don't the police understand your web site is just one source for their frequencies?

There are no secrets in communications, especially when they push the transmitter button.

If I had said frequencies I would post them for you. I reside in the U.S. and there is nothing they can do to me.

I am quite surprised the police don't have enough knowledge to know the source availability of radio information.

Umm.. No.

This is a newsgroup who's topic is SCANNERS, not war stories... You want
war stories, go find the appropriate newsgroup(s) for it.

There is a reason why there are SO many different groups; one for nearly
every interest. Could imagine the whole world in this one single group
talking about whatever the hell they wanted? Wouldn't be a pretty site at
all...

Keep it on topic and the group will be a better place for everyone...

Hello!

My AOR AR-2800 scanner have a problem with background noise. It has
increased suddenly, and it does not matter if the signal is strong or not.
The sensitivity is okay (measured with a RF-generator), and when the S-meter
is showing max the background noise is still quite high.

Anybody with ideeas how to fix this?

A schematic of the scanner would also be a great help.

/Brian

absolutely incredible,all the freqs sre on PROMA database/UKSD and other sources,to add to that Northumbria use secure Masc on some channels anyway.

and of course Airwave well on its way,have Northumbria no real crime to deal with???

i have run PROMA for over 10 years and never once been told to stop publishing freqs.

The pictures and the truth that Q Q@Q.invalid.com would rather you not have access to. Decide for

yourself.

http://regulareverydaypeople.com/ Lots of links

http://www.robert-fisk.com/iraqwarvictims_mar2003.htm

http://www.robert-fisk.com/articles207.htm

wave of protest around the world that continues today.
From every continent the people have spoken: We will not fall in line with this outrage against the Iraqi

people and all of humanity and we are determined to stop it! U.S. embassies had to close because of

angry protests at their gates. And here in the U.S. the actions of tens of thousands resulted in No Business

as Usual across the country.

Most notably, in San Francisco over 1500 were arrested as they shut down the city, with people stepping

forward all day from 7 a.m. to 11 p.m. to fill the streets as earlier groups of protestors were hauled to jail.

In Chicago, thousands took over Lake Shore Drive.

In New York City, police barricades were broken through and thousands filled two solid blocks south of

42nd Street, tying up Times Square traffic for two hours.

People in city after city spoke with their voices and their bodies: We Do Not Want This War and We Mean

It! And everywhere the youth - walking out of high schools and off college campuses with their glorious

passion and righteous anger, full of determination to stop this murderous war and fight for another, better

world!

The U.S. has launched its preemptive war on Iraq.

But the people are not being silenced! "This is not being done with our consent!" (Expressed in many

different ways on radio interviews.) "I walked out with my students today!" (A teacher speaking in NYC's

Union Square at 12 noon.) "This is one of the most worthwhile things I have ever done with my life" (A

54-year-old teacher as he sat in a San Francisco intersection handcuffed by the police.)

The people learned together how to "cross the line" and step up resistance.

And now that massive bombing of Baghdad has begun, we must take those lessons, spread them

throughout society, and take our resistance to still greater heights of breadth, daring, creativity and

determination. In the days ahead we must show the would-be emperors - now standing naked in all their

viciousness and illegitimacy - that the people will not stop until we have stopped this war and their entire

war on the world.

You can do a few things in this case. You can contact the base provo
martial and file a complaint! You should also send a letter to the base
commander.. Because it went across state lines file a complaint with the US
Postal authorities, i.e. they regulate UPS... And you can also file a
complaint with the F.B.I. because he's in the millitary they handle it..

The Scanner Dude CWO/5 Ret 24 Years :-)

Well this is an easy answer, go to
http://webpages.charter.net/moment/winscan780.htm
and check outComputer Control Scanner Software Testing Theirs everything
you want to know about software for your BC780XLT :-)

Sorry, I had assumed he was putting scanner audio on
the net.

Mustn't jump to conclusions.

It isn't illegal to publish frequency information, otherwise
you would be serving your fifth term in the nick, Paul.

What about the various paper publications. They going to be
closed down as well.

2677. Replacement battery for Uniden Bearcat 890XLT?

Newsgroup: rec.radio.scanner
Date: 2003-04-12 17:51:27 UTC
From: AES/newspost <siegman@stanford.edu>
Message-ID: <siegman-D0B0ED.10512712042003@news.stanford.edu>
Source record: 32995

Pulled out a Bearcat 890XLT (ac operated tabletop unit) the other day after it had been stored away in a closet for maybe 5 years or longer, and programmed in a bunch of stations.

Works fine -- except the stations all disappeared overnight, or after a day or two, even with the unit plugged in.

I assume this says the backup battery is dead; but the manual says the internal battery is not user replaceable. Any easy way to replace it? Or am I off to the local scanner service place?

(Out of curiousity, what would be reasonable eBay prices for Bearcat 890XLT or Realistic Pro 2006, excellent condition, original boxes and manuals?)

It depends on how handy you are with a soldering iron. The battery is replaceable, and it really isn't all that difficult, just use caution if you do it yourself.

Aren't politics part of scanning? Every time you hear a police call, every time you listen to military frequencies, every time you listen to about ANYTHING, it's about politics, in one way or another.
Do you listen to the TV and radio network frequencies - the reporters, and so forth? What, these days, are THEY talking about, for the most part? The police enforce laws, those laws are passed by politicians, and their actions reflect the mandates of the politicians.
Granted, there's been allot of posts regarding the war - but have you also blanked-out the military frequencies on your radio? If you've been blocking channels the way you want to block what you see in this group, I don't see how you are getting much enjoyment out of scanning, so your dropping out of this group would be no great loss.
I don't listen to certain frequencies myself, as some are rather boring. But like the choice you have of what frequencies you listen to, you also can use a kill filter to avoid the posts you have no interest in. As I ignore certain frequencies, I also ignore certain posts.

I'm impressed by the following quote:

"Why of course the people don't want war. Why should some poor slob on a farm want to risk his life in a war when the best he can get out of it is to come back to his farm in one piece? Naturally the common people don't want war neither in Russia, nor in England, nor for that matter in Germany. That is understood. But, after all, it is the leaders of the country who determine the policy and it is always a simple matter to drag the people along, whether it is a democracy, or a fascist dictatorship, or a parliament, or a communist dictatorship. Voice or no voice, the people can always be brought to the bidding of the leaders. That is easy. All you have to do is tell them they are being attacked, and denounce the peacemakers For lack of patriotism and exposing the country to danger. It works the same in any country."

Hermann Goering, Hitler's Reich-Marshall, speaking at the Nuremberg Trials following WWII"

How about President Bush's "If you're not with us, you're against us"? This is not sound reasoning. You can be against the unjustified invasion of a country that has made no overt acts of aggression against this country without being "against this country". The above quote perfectly constrasts those that have been enticed into bloodlust against some unknown enemy, with those that are circumspect being labeled as anti-patriotic.

Regards

Hello all, I'm a state trooper in Indiana and soon I'll be transferring to the Indianapolis area from the wonderful town of Gary. Most of the departments in the Indy area (Marion County) use what is called MECA (Metropolitan Emergency Communications Agency) which is an 800 Mhz Trunking system of 24 frequencies. I'm looking for a scanner I can use in my car that will be able to monitor the agencies in the area. Here are my requirements:

1) Must be able to monitor and follow the agencies' transmissions on MECA
2) Must have alphanumeric programming for each memory location so I can see who I'm listening to and not have to remember which department memory slot 47 is just from memory.
3) Must be able to be mounted in the center console of my car and powered by the car's 12v dc (i.e. not a handheld scanner)
4) Must be somewhat affordable! I'm not trying to spend over $150 or so.

If anyone has any recommended brands, models, or stores to look into I would greatly appreciate it. I'm not huge into any one brand so I'm not above using some lesser-known brand as long as it works!

Thanks in advance!
Andy

The Ontario Unlisted Frequency Guide is dedicated to scanner radio hobbists. On here you will find lists of Ontario radio frequencies that are not listed on any web page, published in any scannner book (Haruteq or Scantrix) or listed in the government frequency list (Industry Canada's TAFL). The Ontario Frequency Guide mailing list (oufg) is for scanner radio hobbyists so they have a public forum to be able to chit chat with each other about anything relating to the radio scanner hobby in Ontario as well you will be able to recieve updates of what changes I have made to the Ontario Unlisted Frequency Guide web pages.

Ontario Unlisted Frequency Guide - http://oufg.webhop.net/

Well if you need trunking then you have ONLY two choices. Radio Shack on
Uniden.
You are not going to get any new trunking scanner for $150 or so.
Welcome to reality.
GB

Is banjo production of interest to the typical scanner user? No! The war this nation is involved in at the moment is. This newsgroup is a means of communications between scanner users. To limit that communications to just scanners if rather narrowly focused, don't you think? Taken even a little further, your position would exclude messages about frequencies (this is not scanners), power adapters (not scanners), antennas (not scanners), and so on.

Matthew Tempest
Tuesday February 4, 2003

Noam Chomsky: The [peace] demonstrations were another indication of a quite remarkable phenomenon. There is around the world and in the United States opposition to the coming war that is at a level that is completely unprecedented in US or European history both in scope and the parts of the population it draws on.

There's never been a time that I can think of when there's been such massive opposition to a war before it was even started. And the closer you get to the region, the higher the opposition appears to be. In Turkey, polls indicated close to 90% opposition, in Europe it's quite substantial, and in the United States the figures you see in polls, however, are quite misleading because there's another factor that isn't considered that differentiates the United States from the rest of the world. This is the only country where Saddam Hussein is not only reviled and despised but also feared, so since September polls have shown that something like 60-70% of the population literally think that Saddam Hussein is an imminent threat to their survival.

Now there's no objective reason why the US should be more frightened of Saddam than say the Kuwaitis, but there is a reason - namely that since September there's been a drumbeat of propaganda trying to bludgeon people into the belief that not only is Saddam a terrible person but in fact he's going to come after us tomorrow unless we stop him today. And that reaches people. So if you want to understand the actual opposition to the war in the US you have to extract that factor. The factor of completely irrational fear created by massive propaganda, and if you did I think you'd find it's much like everywhere else.

What is not pointed out in the press coverage is that there is simply no precedent, or anything like a precedent, for this kind of public opposition to a war. And it extends itself far more broadly, it's not just opposition to war it's a lack of faith in the leaderships. You may have seen a study released by the world economic forum a couple of days ago which estimated trust in leaders, and the lowest was in leaders of the United States. Trusted by little over quarter of the population, and I think that reflects concerns over the adventurism and violence and the threats that are perceived in the actions and plans of the current administration.

These are things that ought to be central. Even in the United States there is overwhelming opposition to the war and that corresponding decline in trust in the leadership that is driving the war. This has been developing for some time but it is now reaching an unusual state, and, just to get back to the demonstrations over the weekend, that's never happened before. If you compare it with the Vietnam war, the current stage of the war with Iraq is approximately like that of 1961 - that is, before the war actually was launched, as it was in 1962 with the US bombing of South Vietnam and driving millions of people into concentration camps and chemical warfare and so on, but there was no protest. In fact, so little protest that few people even remember.

The protests didn't begin to develop until several years later when large parts of south Vietnam were being subjected to saturation bombing by B-52s, hundreds of thousands of troops where there, hundreds of thousands had been killed, and then even after that, when the protests finally did develop in the US and Europe it was mostly focused on a side-issue - the bombing of north Vietnam which was undoubtedly a crime, it was far more intense in the south which was always the US target, and that's continued.

It's also, incidentally, recognised by the government. So when any administration comes into office the first thing it does is have a worldwide intelligence assessment - "What's the state of the world?" - provided by the intelligence services. These are secret and you learn about them 30 or 40 years later when they're declassified. When the first Bush administration came in 1989 parts of their intelligence assessment were leaked, and they're very revealing about what happened in the subsequent 10 years about precisely these questions.

The parts that were leaked said that it was about military confrontations with much weaker enemies, recognising they were the only kind we were going to be willing to face, or even exist. So in confrontations with much weaker enemies the United States must win "decisively and rapidly" because otherwise popular support will erode, because it's understood to be very thin. Not like the 1960s when the government could fight a long, brutal war for years and years practically destroying a country without any protest. Not now. Now they have to win. They have to terrify the population to feel there's some enormous threat to their existence and carry out a mircaculous, decisive and rapid victory over this enormous foe and march on to the

next one.

Remember the people now running the show in Washington are mostly recycled Reaganites, essentially reliving the script of the 1980s - that's an apt analogy. And in the 1980s they were imposing domestic programmes which were quite harmful to the general population and which were unpopular. People opposed most of their domestic programmes. And the way they succeeded in ramming it through was by repeatedly keeping the population in a state of panic.

So one year it was an airbase in Grenada which the Russians were going to use to bomb the United States. It sounds ludicrous but that was the propaganda lie and it worked.

Nicaragua was "two days' marching time from Texas" - a dagger pointed at the heart of Texas, to borrow Hitler's phrase. Again, you'd think the people would collapse with laughter. But they didn't. That was continually brought up to frighten us - Nicargua might conquer us on it's way to conquer the hemisphere. A national emergency was called because of the threat posed to national security by Nicargua. Libyan hitmen were wandering the streets of Washington to assassinate our leader - hispanic narco-terrorists. One thing after another was conjured up to keep the population in a state of constant fear while they carried out their major terrorist wars.

Remember, the same people declared a war on terror in 1981 that was going to be the centrepiece of US foreign policy focused primarily on central America, and they carried out a war on terror in central America where they ended up killing about 200,000 people, leaving four countries devastated. Since 1990, when the US took them over again, they've declined still further into deep poverty. Now they're doing the same thing for the same purposes - they are carrying out domestic programmes to which the population is strongly opposed because they're being harmed by them.

But the international adventurism, the conjuring up of enemies that are about to destroy us, that's second nature, very familiar. They didn't invent it, others have done the same thing, others have done it in history but they became masters of this art and are now doing it again.

I don't want to suggest that they have no reasons for wanting to take over Iraq. Of course they do - long-standing reasons that everyone knows. Controlling Iraq will put the US in a very powerful position to extend it domination of the major energy resources of the world. That's not a small point.

But look at the specific timing. It's rather striking that the propaganda drumbeat began in September - what happened in September? Well, it's when the Congressional campaign began and it was certain that the Republicans were not going to win it by allowing social and economic issues to dominate. They would have been smashed. They had to

do exactly what they did in the '80s. Replace them by security issues and in the case of a threat to security people tend to rally around the president - a strong figure who'll protect us from horrible dangers.

The more likely direction this will take [after a war with Iraq] will be Iran, and possibly Syria. North Korea is a different case. What they are demonstrating to the world with great clarity is that if you want to deter US aggression you better have weapons of mass destruction [WMD], or else a credible threat of terror. There's nothing else that will deter them - they can't be deterred by conventional forces. That's a terrible lesson to teach, but it's exactly what's being taught.

For years, experts in the mainstream have been pointing out that the US is causing weapons proliferation by its adventures since others cannot protect themselves except by WMD or the threat of terror. Kenneth Waltz is one who recently pointed this out. But years ago, even before the Bush administration, leading commentators like Samuel Huntington in Foreign Affairs, the main establishment journal, were pointing out that the United States is following a dangerous course. He was talking about the Clinton administration but he pointed out that, for much of the world, the US is now regarded as a rogue state and the leading threat to their existence. In fact one of the striking things about the opposition to the war now, again unprecedented, is how broadly it extends across the political spectrum, so the two major foreign policy journals, Foreign Affairs and Foreign Policy have just in their recent issues run very critical articles by distinguished mainstream figures opposing the resort to war in this case.

The American Academy of Arts and Sciences rarely takes a position on controversial current issues has just published a long monogram on this issue by its committee on international security giving as sympathetic as possible an account of the Bush administration position then simply dismantling it line by line on very narrow grounds - much narrower than I would prefer - but nevertheless successfully.

"Patriotism means to stand by the country. It does NOT mean to stand
by the President or any other public official save exactly to the
degree in which he himself stands by the country. It is patriotic to
support him insofar as he efficiently serves the country. It is
unpatriotic not to oppose him to the exact extent that by inefficiency
or otherwise he fails in his duty to stand by the country."

Theodore Roosevelt

Noam Chomsky: The [peace] demonstrations were another indication of a quite remarkable phenomenon. There is around the world and in the United States opposition to the coming war that is at a level that is completely unprecedented in US or European history both in scope and the parts of the population it draws on.

There's never been a time that I can think of when there's been such massive opposition to a war before it was even started. And the closer you get to the region, the higher the opposition appears to be. In Turkey, polls indicated close to 90% opposition, in Europe it's quite substantial, and in the United States the figures you see in polls, however, are quite misleading because there's another factor that isn't considered that differentiates the United States from the rest of the world. This is the only country where Saddam Hussein is not only reviled and despised but also feared, so since September polls have shown that something like 60-70% of the population literally think that Saddam Hussein is an imminent threat to their survival.

Now there's no objective reason why the US should be more frightened of Saddam than say the Kuwaitis, but there is a reason - namely that since September there's been a drumbeat of propaganda trying to bludgeon people into the belief that not only is Saddam a terrible person but in fact he's going to come after us tomorrow unless we stop him today. And that reaches people. So if you want to understand the actual opposition to the war in the US you have to extract that factor. The factor of completely irrational fear created by massive propaganda, and if you did I think you'd find it's much like everywhere else.

What is not pointed out in the press coverage is that there is simply no precedent, or anything like a precedent, for this kind of public opposition to a war. And it extends itself far more broadly, it's not just opposition to war it's a lack of faith in the leaderships. You may have seen a study released by the world economic forum a couple of days ago which estimated trust in leaders, and the lowest was in leaders of the United States. Trusted by little over quarter of the population, and I think that reflects concerns over the adventurism and violence and the threats that are perceived in the actions and plans of the current administration.

These are things that ought to be central. Even in the United States there is overwhelming opposition to the war and that corresponding decline in trust in the leadership that is driving the war. This has been developing for some time but it is now reaching an unusual state, and, just to get back to the demonstrations over the weekend, that's never happened before. If you compare it with the Vietnam war, the current stage of the war with Iraq is approximately like that of 1961 - that is, before the war actually was launched, as it was in 1962 with the US bombing of South Vietnam and driving millions of people into concentration camps and chemical warfare and so on, but there was no protest. In fact, so little protest that few people even remember.

The protests didn't begin to develop until several years later when large parts of south Vietnam were being subjected to saturation bombing by B-52s, hundreds of thousands of troops where there, hundreds of thousands had been killed, and then even after that, when the protests finally did develop in the US and Europe it was mostly focused on a side-issue - the bombing of north Vietnam which was undoubtedly a crime, it was far more intense in the south which was always the US target, and that's continued.

It's also, incidentally, recognised by the government. So when any administration comes into office the first thing it does is have a worldwide intelligence assessment - "What's the state of the world?" - provided by the intelligence services. These are secret and you learn about them 30 or 40 years later when they're declassified. When the first Bush administration came in 1989 parts of their intelligence assessment were leaked, and they're very revealing about what happened in the subsequent 10 years about precisely these questions.

The parts that were leaked said that it was about military confrontations with much weaker enemies, recognising they were the only kind we were going to be willing to face, or even exist. So in confrontations with much weaker enemies the United States must win "decisively and rapidly" because otherwise popular support will erode, because it's understood to be very thin. Not like the 1960s when the government could fight a long, brutal war for years and years practically destroying a country without any protest. Not now. Now they have to win. They have to terrify the population to feel there's some enormous threat to their existence and carry out a mircaculous, decisive and rapid victory over this enormous foe and march on to the

next one.

Remember the people now running the show in Washington are mostly recycled Reaganites, essentially reliving the script of the 1980s - that's an apt analogy. And in the 1980s they were imposing domestic programmes which were quite harmful to the general population and which were unpopular. People opposed most of their domestic programmes. And the way they succeeded in ramming it through was by repeatedly keeping the population in a state of panic.

So one year it was an airbase in Grenada which the Russians were going to use to bomb the United States. It sounds ludicrous but that was the propaganda lie and it worked.

Nicaragua was "two days' marching time from Texas" - a dagger pointed at the heart of Texas, to borrow Hitler's phrase. Again, you'd think the people would collapse with laughter. But they didn't. That was continually brought up to frighten us - Nicargua might conquer us on it's way to conquer the hemisphere. A national emergency was called because of the threat posed to national security by Nicargua. Libyan hitmen were wandering the streets of Washington to assassinate our leader - hispanic narco-terrorists. One thing after another was conjured up to keep the population in a state of constant fear while they carried out their major terrorist wars.

Remember, the same people declared a war on terror in 1981 that was going to be the centrepiece of US foreign policy focused primarily on central America, and they carried out a war on terror in central America where they ended up killing about 200,000 people, leaving four countries devastated. Since 1990, when the US took them over again, they've declined still further into deep poverty. Now they're doing the same thing for the same purposes - they are carrying out domestic programmes to which the population is strongly opposed because they're being harmed by them.

But the international adventurism, the conjuring up of enemies that are about to destroy us, that's second nature, very familiar. They didn't invent it, others have done the same thing, others have done it in history but they became masters of this art and are now doing it again.

I don't want to suggest that they have no reasons for wanting to take over Iraq. Of course they do - long-standing reasons that everyone knows. Controlling Iraq will put the US in a very powerful position to extend it domination of the major energy resources of the world. That's not a small point.

But look at the specific timing. It's rather striking that the propaganda drumbeat began in September - what happened in September? Well, it's when the Congressional campaign began and it was certain that the Republicans were not going to win it by allowing social and economic issues to dominate. They would have been smashed. They had to

do exactly what they did in the '80s. Replace them by security issues and in the case of a threat to security people tend to rally around the president - a strong figure who'll protect us from horrible dangers.

The more likely direction this will take [after a war with Iraq] will be Iran, and possibly Syria. North Korea is a different case. What they are demonstrating to the world with great clarity is that if you want to deter US aggression you better have weapons of mass destruction [WMD], or else a credible threat of terror. There's nothing else that will deter them - they can't be deterred by conventional forces. That's a terrible lesson to teach, but it's exactly what's being taught.

For years, experts in the mainstream have been pointing out that the US is causing weapons proliferation by its adventures since others cannot protect themselves except by WMD or the threat of terror. Kenneth Waltz is one who recently pointed this out. But years ago, even before the Bush administration, leading commentators like Samuel Huntington in Foreign Affairs, the main establishment journal, were pointing out that the United States is following a dangerous course. He was talking about the Clinton administration but he pointed out that, for much of the world, the US is now regarded as a rogue state and the leading threat to their existence. In fact one of the striking things about the opposition to the war now, again unprecedented, is how broadly it extends across the political spectrum, so the two major foreign policy journals, Foreign Affairs and Foreign Policy have just in their recent issues run very critical articles by distinguished mainstream figures opposing the resort to war in this case.

The American Academy of Arts and Sciences rarely takes a position on controversial current issues has just published a long monogram on this issue by its committee on international security giving as sympathetic as possible an account of the Bush administration position then simply dismantling it line by line on very narrow grounds - much narrower than I would prefer - but nevertheless successfully.

My fellow scanner enthusiast "Q". I have a few questions for you. When you go to church (you do?) do you talk scanners or world utility frequencies or do you talk to your GOD??? I know, that's a hard one but I have every confidence that you will be able to answer. When I go to the voting booth or a political rally I talk politics not scanners. What do they do in Columbus?
You see, that's just respect for the program at hand or you wouldn't be there in the first place.

The police are hired by politicians to enforce laws that the politicians made. But, the police are not permitted by the code of ethics and in some cases law to take part in any political rally while on duty or in uniform.

Come on "Q" and Whoever, I know you see what the majority of posters/readers in these radio groups are saying. We would just like to stop the "OFF" topic posting and get back to our hobby of radios. You know there are groups for all subjects, we only ask that you or whoever take the off topic threads to the appropriate group it fits in.

I love my country, (hell, i'm an old Veteran) but don't have to talk about it where it doesn't fit in.

Please reconsider what you post and in which group.

God Bless America and My Fellow Americans

Though I oppose the war, it's unlikely that any action at this point will end the coalition involvement. While listening to a Canadian shortwave station, the guest was asked what criteria would be used to declare an end to the war and the restoration of stability in the region. He replied that the U.S. (actually I believe he should have said coalition) is now in control of 5 times more oil than is available in the U.S., and that he doesn't believe that they'll relinquish this control anytime too soon. He wasn't bitter in his speech and inflections, simply stating this as a matter of fact.

I suspect that this is true.

Could someone explain why scanners do not pick up FM and AM commerical radio stations ? Sort of like a all in one reciever ?

Are there any scanners that do ? For instance, the Uniden 250D I believe has continuous coverage from 25mhz to 1.3ghz. Does this mean that it can get the FM freq. of 88 to 107mhz ?

Cross-posted to: rec.radio.scanner,alt.radio.scanner

The long-term goal of PA-SitRep is to provide rapid
emergency situation reporting service, free of
charge, to any interested served agencies, as well
as our own Emergency Alert list, much in the same
way that SKYWARN provides weather situation
reports for the National Weather Service.

PA-SitRep (Pennsylvania Situation Report) is developing
a group of PA-SitRep Contacts, most of whom (49 so far)
are Amateur Radio Operators and or scanner enthusiasts.
We are seeking additional volunteers.

PA-SitRep Contacts are asked to monitor emergency
situations from their local areas and post only major
emergency situation reports to the PA-SitRep
Discussion e-mail list which is used, in part, for
monitoring major developing emergency situations.
If warranted, PA-SitRep Administrators will move the
emergency situation reports to our main emergency alert
PA-SitRep list where the alert is distributed to over 500
subscribers throughout the state of Pennsylvania.

If you're interested in volunteering as a PA-SitRep
Contact, or have any questions regarding PA-SitRep,
please visit the website to learn more:
http://www.pa-sitrep.com

-David Kleber, KB3FXI
PA-SitRep List Owner and PA-SitRep.com Founder
www.PA-SitRep.com

PA-SitRep website and mail lists are
100% non-commercial / non-profit.

Icom r-3 is a general coverage scanner, up to about 2.5GHz, that also receives AM, FM (although not in stereo, unfortunately), and TV, displaying the picture on a 2" color LCD screen. All this, in a small, lightweight package... I love mine, even though it's a bear to program using the buttons (I use a software package and cable from my computer's serial port). Hope this helps....

If you oppose the war in Iraq, does that mean you are against freeing the tortured, impoverished, suppressed and "scared to death to speak out" citizens of Iraq, or that you are against us dethroning the murderous, torturous Iraqi regime? I'm not quite sure I understand where you stand? Please enlighten me. I know you have valuable things to say about this so I want to completely understand your grounds for protest.
I don't know if you have been keeping up with the current events over in Iraq but just to bring you up to date here, I have been seeing a lot of happy faced Iraqi citizens lately hugging, praising and embracing our allied troops that are liberating them! Gee, sure doesn't seem like we are doing something that is not needed and/or justified! Maybe you few protesters that have been looking for something to do other than being a good, patriotic citizen of this great, free country of ours, have selective vision and hearing. Don't forget, it's battles just like this one that, over the many years of our existence as a "free nation", has secured our rights and freedoms. If, during the last 25 years, an Iraqi citizen would have spoken out such as you and your few ill advised comrades are doing, do you think they would have gotten away with these outbursts as you can and will? Think about it. We were needed badly in Iraq. Thank God our President Bush didn't knuckle under to his opposition in this controversial matter. Nuff said.

From the News reports I would say the country is in anarchy. That's
definetly a step up from a dictatorship wouldn't you say?

If you believe those people are going to embrace us in the long run
you're dreaming. Our culture will always fly in the face of theirs.
There will be a signifigant number who will always resent us taking
over their land. The seeds of terrorism are continuing to be sewn. We
just made thousands more enemies. Is that what we are trying to do?
Make more enemies?

To quote a marine who stood by and watched as a gang of Iraqis loot a
store. When the merchant asked the marine "Is this your liberation?"
The marine replied "Hell, it ain't my job to stop them" "Goddamn
Iraqis will steal anything if you let them. Look at them."

If that's the attitude of the average Joe. What kind of liberation is
that? Who is being liberated? The rabble?

And the meek shall inherit Iraq.

"Patriotism means to stand by the country. It does NOT mean to stand by the President or any other public official save exactly to the degree in which he himself stands by the country. It is patriotic to support him insofar as he efficiently serves the country. It is unpatriotic not to oppose him to the exact extent that by inefficiency or otherwise he fails in his duty to stand by the country."

Theodore Roosevelt

>Do you know how to make an computer interface cable to link this scanner
>with a serial PC port?

There are, of course, many ways to do it. The simplest is probably to use Maxim's MAX232 or one of its successors. You also need a power supply for the chip, which you can either leech from the serial port or supply from an external source.

>It's not very easy to find ERW-4C interface.

There is a cable from Icom that is compatible. I forgot the name, but a bit of googling should find it. You may also want to take a look at the DJ-X3 mail group at http://groups.yahoo.com. The archive contains some information about the cable. Also, the files section contains a diagram for building your own interface.

>Alinco's internet site say that a simple electric connection cable may
>not work properly.

They are right. In fact, "may not" is not entirely correct. "Will not" is more accurate. The X3 communicates using 0V/5V signals, while the serial port needs +/- 5 to +/- 15 V. Additionally, the signal must be inverted, so that 0 V gives +15 V, and 5 V gives -15 V.

The better question would be "why would you want to??" all FM radio stations broadcast in stereo not mono like every scanner in the world is.. And take that bubble gum out of your pocket AM?? this is the year 2003 not 1959.. The only thing on AM is god shows and talk shows.. buy a cheap $2.50 radio and you have both AM & FM, is another good reasion why you don't have AM/FM on a scanner :-)

I bought it off eBay in an action with my 780.
I will not be using it so I would like to sell it to someone who will enjoy it.
I have pictures available for you.
It is the scanner, antenna and print out of the owners manual only. It does not have the feet or mounting bracket.
I will ship it UPS for free. I prefer paypal. My eBay id is anthonyb013, check my feedback if you wish
price is $50.

When did a newsgroup become a church?

> I know, that's a hard one but I have every confidence that
> you will be able to answer. When I go to the voting booth or a political
rally
> I talk politics not scanners.

Funny. I talk about whatever anyone wants to talk about. After all, we all KNOW why we're there. I never heard a sould tell me that conversations that were not political were not allowed at a polling place. Thanks for the heads-up - next time I'm at the polls, I'll chastise everyone who talks about anything but politics. That may be a problem, though - most conversati ons are about anything BUT politics - weather, grocery prices, gas prices, even - GASP! - radio.

> What do they do in Columbus?

I've been all over the states, and many different countries, and never heard of any restrictions on conversation that was "off-topic". I've been to various conventions, and most of the conversation has nothing to do with the subject of the convention. I'm sure most have waited in line at motor vehicles, and other than complaints about the wait, I don't recall many people actually talking about why they were there.

> The police are hired by politicians to enforce laws that the politicians made.
> But, the police are not permitted by the code of ethics and in some cases law to
> take part in any political rally while on duty or in uniform.

You missed the point. Their very activity is political in nature.

> Come on "Q" and Whoever, I know you see what the majority of posters/readers in
> these radio groups are saying. We would just like to stop the "OFF" topic
> posting and get back to our hobby of radios.

First point, if that were so, there would be no responses to OT posts. Second, the complaints themself are OT. Third, as you have filters in your radio(s), you also have filters for NGs.

> You know there are groups for all subjects, we only ask
> that you or whoever take the off topic threads to the
> appropriate group it fits in.

So now we have censors? Nobody is flooding the NG with OT posts. I see several threads - and again, they wouldn't be there if people weren't responding and interested in the subject.

> I love my country, (hell, i'm an old Veteran) but don't have to talk about it
> where it doesn't fit in.

So don't.

> Please reconsider what you post and in which group.

Most of my "OT" posts have been responses to others. The bogus "Q" has been blasting his nonsense to many NGs. Again, if there was no interest in the topic, the threads would die. When you go to work, are you going to tell me that all you talk about at your job IS your job?

> God Bless America and My Fellow Americans

Well, we can at least agree on THAT.

:-)

The DJ-X3 also picks up AM and FM radio stations.

2740. OT Uniden 785 D need help with software availability.

Newsgroup: rec.radio.scanner
Date: 2003-04-13 22:21:22 UTC
From: "Whats up"@nowhere.net
Message-ID: <v9jokomef5271e@corp.supernews.com>
Source record: 32856

Ok, I'm going nuts. I have the Uniden 785D, the programming cable, and a totally useless E-Scanner program from Uniden. If I get this correctly, to use the E-Scanner (classic), I have to buy the databases so that I can choose the desired frequencies and copy them, eventually, over to the 785D.

Or I can get an online software copy of BulTel's ACR-250, via a download. Or I can go to Scannermaster, and get a download.

How the hell do I get a version of anything on a friggin CD, so that I can keep of copy of it in case my computer crashes, being that I don't own a cd burner.

All I want to do is to be able to use my computer to write to the memories of the 785D, I don't want remote control of the radio, I don't want a spectrograph, I just want a relatively simple interface that costs less then $100, is available on CD, and that I can send a money order to purchase it with.

Why did Uniden include a totally useless program with the 785. Sheesh, the radio is expensive enough without all these games.

Any Help WILL BE GREATLY APPRECIATED.

Regards.

Never say never.
Nothing is absolute.

The different software programs available are VERY small. You don't need a CD burner. If you want to keep a copy as a back up, save it to a floppy. There are lots of good programs, many are free and others are inexpensive, well under $100.

I don't know what you mean about buying the database. All the frequencies you would ever want are all over the internet for free.

Good luck,

Jim

Actually, there are several reasons why broadcast AM/FM are a good
idea on a scanner(although admittantly, not crucial for most people)..

1.in some parts of the country, there is still worthwhile programming
on AM.

2.Even though the sound quality is not good, it IS handy to be able
to listen to the local music/talk/news/sports station without having
to carry an extra box.

3.In a emergency, the more frequencies covered, the better.
AND in a MAJOR emergency, AM will probably still be more reliable
as A source of news than FM.
(since in many major markets, the AM transmitters are outside of
town, while the FM transmitters tend to be right in the center of
town.
So an event that takes the FM ones out may well not take out the AM
stations.

4.AM travels further, as the frequencies used "skip" well at night, so
you may have a chance to get news from out of town, even if the local
stuff is down.

As an aside, to answer the poster's question-the better scanners DO get
broadcast-FM mostly, but some AM too(many of the ones that get AM also
receive short wave too(also useful both for convience, and for
emergencies).

The reason all scanners do not cover broadcast freqs-one word, MONEY.
It costs more to design a broadband receiver than one with gaps.
Also, for FM(and TV audio too) you need a wider filter, else distortion
will result(it's not as critical on TV, as the deviation is somewhat
narrower than that of FM radio, but it's still an issue).
So the scanner has to be able to select FM wide(another expense).
BTW, as I'm typing this, I'm listening to a local FM music station
on a Sony Wavehawk(ICF-SC1) scanner.

Better yet with most stations having a feed into the computer, just set your
PC to receive what you would like to hear
particularly if you have high speed ADSL or cable feed. Most major stations
in North America have internet feeds.

I would agree that AM is only good for god shows and talk shows like Rush
Limbaugh and what otehr personally spins your
antenna. Some of the larger AM stations are now stereo.

The only other important purpose of AM stations (muich more important than
Rush Limbaugh) is broadcasting hockey games.

2749. Re: OT Uniden 785 D need help with software availability.

Newsgroup: rec.radio.scanner
Date: 2003-04-14 00:53:25 UTC
From: "Whats up"@nowhere.net
Message-ID: <v9k1hrgjipmaa8@corp.supernews.com>

I downloaded a program from BulTel Software (limited use free version), the program is 5Mb in size. The program from Uniden is 6MB in size. The BulTel programs go for $39 and $69, and the Uniden E-Scanner PLUS goes for $99.

I am probably missing something here, as I am very new to this, being more an aficionado of shortwave radios in the past then computer programming of police scanners. Due to the large number of channels that the 785 has, and the alpha-tagging capability, programming the scanner via the computer seems very attractive.

Apparently, as far as I can tell, the E-Scanner free version that comes with the 785D from Uniden requires access to an organized database, tailored either by Uniden or by a Communication magazine that they name, specifically for the frequencies available in the area that you decide. In both cases, you have to pay for the database. When you have the database, you load the database into the free E-Scanner software, select the frequencies that you want, and they are copied and pasted into another section of the E-Scanner program. From this second section, you can edit the entries, and then, when done, load them into the Radio's memories.

Here's the catch, Uniden offers the E-Scanner Plus that permits "the manual entering of frequencies and Alpha Tags" into the software program. How nice. Unless I'm wrong, without an additional purchase, the thing that Uniden supplies with their $350 scanner is nothing more than a Frisbee.

All I want is to see essentially a spreadsheet, enter the requisite data, and upload it to the appropriate scanner memories.

If you or anyone else know of a simple program to do this, I would be grateful for a link to the page.

Thanks.

Jim

I can't speak for the 785, but I have the 780 and the software packages for it, including the BulTel ARC780 are under 1 MB in size. I'm not sure why the 785 software would be so large. There are several others out there and they are small too.

If BulTel 785 software works the same as their ARC780, you don't have to worry about loosing it if your hard drive crashes. You can always download it again. When you pay, they give you a KEY to unlock the demo version and make it a full version. Just print out your KEY number and keep it safe.

As far as your other comments, here is how the 780 works and I think the 785 would be similar. You can go to each channel on the radio and put in each freq or trunk and then put in alpha tags. This would be slow and cumbersome. The other option is to put the same info into a program and download them into the radio via a serial port and cable. It's that simple. You can get the Frequencies, Trunks and Alpha tags from many different sources on the internet. No need to buy them.

I think Uniden has a program where you pay them and they will download them to you. I don't see why you would want or need to do that. They are just looking for a couple of bucks for something that is free. You would also do well to find local clubs that keep the local frequencies list up to date. It would be more accurate than the Uniden list they want to sell you.

Good luck,

Jim

I set my scanners bc895xlt and the 780xlt in trunking mode.
They are receiving the same ID but they display different ID numbers. not on
all just about 4 or 5 of them.
The 895 is off the 780 match to the list I have.
anyone else experience this?

Try going here:
http://www.strongsignals.net/access/boards/frequency/board.cgi

Scroll down to Related Links. There will be links to the FCC website where you can get frequency info for free. Also, lot of scanner clubs from all over the country are listed. Strong Signals is a really good site. As long as the FCC data is available for nothing, I'll never PAY to get the info. In addition, www.airnav.com has all the FAA freqs you may need.

If you're really desperate, go to Radio Shack and get a copy of Police Call 2003. It comes with a CD of all the frquency data nationwide. I find the info horribly outdated at times, but some people swear by it.

I have never used computer software with my scanner. Anyway, I really don't want Windows interacting with a $1300 investment (250D, 785D, digital cards). All it takes is one power surge. Zapp! To each his/her own, I guess.

Also, ARC250 is available on a CD from butel.nl, but they jack the price up $15(US) to do it. Gougers!

> up FM and AM commerical radio stations ? Sort
> of like a all in one reciever ?

Tradition is probably the best answer. Of course, the earliest scanners were AM, but were mainly targeted towards business and government agencies (neither of which had much use for broadcast AM).

Later, during the switch to higher frequency FM for communications, scanners with FM quickly dominated the marketplace. At this point, we started to see scanners targeted more towards consumers. Sadly, broadcast AM (520-1710 kHz) was located well below the frequencies covered by those scanners, so was left behind. Beyond the cost of adding AM to a mainly FM scanner, the audio quality was simply not that great for music reception (which is probably why broadcast FM was also rarely added).

However, AM did eventually return to scanners. Of course, it was AM within the frequencies easily covered by these scanners - the VHF AM frequencies used mainly by aircraft.

Interestingly, just as desktop and mobile scanners reached a stage where it became relatively easy and cheap to add broadcast AM/FM, with more beginning to appear with that, consumers generally refocused their attention to handheld scanners.

Of course, things are changing today. It is now fairly easy to add more and more to even handheld scanners, with better speakers to improve audio quality. Obviously, low cost scanners remain centered around the traditional frequencies (the tradition I mentioned above). But, on the more expensive scanners, you will now find very wide frequency coverage, including medium-wave (mainly broadcast AM), shortwave, VHF/UHF, broadcast FM, and even television audio reception.

And what made you the authority on what interests scanner listeners? It might amaze you, but most homes here in the US actually have TV's. We can watch MSNBC or CNN or Fox News...

>This newsgroup is a means of
>communications between scanner users. To limit that communications to just
>scanners if rather narrowly focused, don't you think?

No. That's the purpose of the newsgroup - to discuss SCANNER RELATED issues.

>Taken even a little
>further, your position would exclude messages about frequencies (this is not
>scanners), power adapters (not scanners), antennas (not scanners), and so
>on.

Scanners are used to monitor frequencies, power adapters are used to power scanners and antennas are used to recieve the frequencies on the scanners.

This Uniden Bearcat BC60XLT-1 30 Channel Hand held Police scanner is pretty much new. It has no scratches or dents on it. It comes with the plug, directions and box. It's been laying around in my closet in the box for the past year. The box has a little tear in it. Here's a description of the scanner: -30 Channels, 10 Bands -20 to 512 Megahertz -New Programmable Chain Search -Priority Channel -Full Frequency LCD Display -One Touch Weather -Channel Lockout -Low Battery Indicator -Keypad Lock Feature -AC/DC Operation -Manual Channel Access -Track Tuning -Built-In Scan Delay -Memory Backup

> CNN is a disgrace -

Yeah, I especially like the part about once we pass this imaginary red line around Baghdad, that Iraq would start using the chemical weapons they don't have against us.
http://www.counterpunch.org/rooij04112003.html

Has anyone in U.S. read history of Iraq?
Dubai | By Neena Gopal | 12/04/2003

If there are lessons that the U.S. administration must learn, they are the lessons of Iraq's history, replete with storied tales of bloody uprisings, brutal repression and deceit. There is no need to turn the pages too far.

Pre-Baathist, so called free Iraq, saw some half a dozen governments come and go in the space of 40 years, marked by the particularly horrific regicide of the youthful King Faisal II, who was dismembered and dragged through the streets of Baghdad. He was seen, as was his father, as a British puppet, and therefore unacceptable.

Certainly, Saddam Hussain's acceptance by the Iraqi people in the early years stemmed from his systematic
suppression of all opposition, but it was also partly because Saddam was the first Iraqi leader who was seen as
having come up the ranks, and partly because the socialist ideology of the Baathists that he initially espoused held out the promise of an equitable distribution of Iraq's oil wealth.

"From the seventies onwards, Baghdad had expressways, free education and health care, Iraqis had a higher
standard of living than anyone in the Arab world," says Ahmed Samarrai, a young Iraqi economist who lives in the UAE, and a strong critic of U.S. intervention in his homeland.

The U.S. must pause to reflect on whether it would be more prudent to tackle the pressing issues of restoring peace and order, and supplies of clean water, electricity, food and medicine rather than rush to impose a government, that would be seen anyway, as tainted by Washington's long shadow.

Yeah great site.

Hey "George" I noticed that on your "great site" you got a letter from Pozilla. In it, it says they offered you a refund and you didn't take it. How come? Maybe cause you're a moron?

Mmmm hmmm. Thought so.

I have the software and it works. It's not perfect (none of them are) but it does work. Other people in this group concur. Some like it, some don't but all agree that it worked, or they got their money back if it didn't work for them. Only you seem to believe your own spew.

Plus their website is up, and their support is answering email. It's slow, but they are answering. YOU however, want everyone to believe they're not. Why is that? What did they do to you other than offer you a refund when it became obvious you were just too stupid to use the software?

What are the odds that even after "George" gets his refund he'll still use the software, still beg for warez, and still post his bullshit lies? If I ran Pozilla I woudn't give "George" a 10 cent food stamp.

2783. Buyer Beware: Avoid "letsgodigital" online store

Newsgroup: rec.radio.scanner
Date: 2003-04-15 00:23:53 UTC
From: DougSlug <dougslug@optonline.net>
Message-ID: <tilma.72536$Xd1.25009490@news4.srv.hcvlny.cv.net>
Source record: 32799
Cross-posted to: rec.radio.shortwave,rec.radio.scanner,alt.radio.scanner

I recently became aware of an unethical online store known as the "Let's Go Digital Superstore" (www.ldgsuperstore.com)

I ordered a Sony ICF-SW7600GR portable shortwave receiver from them, and when they confirmed the order by e-mail, they stated "will ship within 24 hours", which is also what their order status web page showed. After three days, no shipping info. When I inquired, they replied, "the order was sent to the warehouse for shipping; we will have tracking information in 2-4 business days". OK, not that bad, but what's up with the "24 hours" thing?

After complaining about their inaccurate shipping status information, they sent me a web page that indicated "Usually ships in 2-3 days". OK, fair enough, but then on that page the price was $10 lower than what I just paid a few days before! I requested that they refund the difference according to their price-matching policy. They replied that the current price is still what I paid, even though the advertised price on their page was $10 less!

This warranted a little research...when I checked their shipping cost, they quoted shipping as $10 HIGHER than what I paid, making the total the same, but making the unit price APPEAR cheaper. That's a little too much game-playing in my opinion. Incidentally, the shipping cost was $27 for UPS Ground from NY to NJ! Ridiculous.

My advice: Avoid "ldgsuperstore", which is a Dealznet site. Look for a more reputable source. I do a lot of online ordering, and I've never dealt with such an unscrupulous outfit. Overall, not a big deal, I admit, but it felt sleazy. Your mileage may vary.

One need only follow the money trail to determine the source of the protests. In this case they all lead back to socialist groups.

The groups play on the emotions of the young people, especially the women. The guys follow naturally as they have learned that the easiest way to get some trim is to attend a protest with the lady of their choice.

War protests are bogus, created by the same socialists that have failed to inculcate their brand of utopia in any part of the world...

<sigh>
For years, Hussein's regime has made it a point to stay one step ahead of the inspectors. Unfettered acess? They had to let Hussein know where they were going before they went there - what a joke. As for the "imaginary line", there were plenty that picked-up that radio and cell-phone traffic regarding that.

Actually I must say that I enjoyed the antenna test page. Every comment he made was right on the money. I have two ScanTennas, 1 ScannerBeam (both these antennas were bought from AntennaWarehouse). And the Create Log P. I couldn't have agreed any more with what was said on this webpage, it was right on the money. I use all these antennas everyday here in the Flat Lands of Florida, even with the ScanTenna I'll be listening to Navy F14's or AirForce F15's engaged in Mock Dogfights nearly 200 miles away. The sigs are so strong you would think they were next door.

My qustion is this: Please give us detail on how you stacked two ScannerBeams? I would love to try this....

>
> Michigan tag, 462 XNH

I don't know what the laws are in Michigan, but it is generally against the law in most jurisidictions to run plates by a civilian to find an owner.

Case in point, a pro-life person had a friend in a local police department who help the pro-life guy and kept running plates of those who were at a women's center (just so the pro-life people could know who the cars belongs to). That friend in the police department lost his job immediately and was hit with a large fine.

In other instance a person was collecting information on plate registrations using the agency's system for his own personal
use. He too was dismissed immediately and was charged.

It's not worth the risk to lose a job (and perhaps a fine and a record) to run plates just to find out who the owner of the registration is. If there is some kind of legal conflict, go to the police and let them do it.

Some states do allow some searches to take place grantedunder certain conditions and they do it. Best to go to the Motor Vehicle office and go that route, rather than try a candlestine route and have someone risk losing their job.

All jurisdictions have a means of recording who accesses the motor vehicle registration databank and when, so it would
be extremely easy to get caught being there doing something when you're not supposed to be doing that.

> the inspectors.

How can they do that? Bio-chemical weapons emit molecules which float into the air, where they can be detected by remote US sensors. Such molecules stick in paint on the walls, stick to table surfaces abailable to swabs of inspectors.

Their manufacture has many other signatures - buildings with tell-tale characteristics, processes with tell-tale indicators.

You can make a point of trying to hide - but you can't really do it.

We here countless excuses as to why we have never seen a single WMD, nor even a shred of real evidence that they exist - oh, Iraq is a large country, Blix is incompetent, we have only been looking for weeks, on and on.

Unfettered acess? They had to let Hussein know where they
> were going before they went there - what a joke.

How did Saddam manage to persuade the molecules to exit from the paint on the walls?

To flee from the air floating at a site?

How did Saddam persuade the soil to decontaminate itself?

Excuses excuses excuses. You guys always have lame excuses.

That on reflection are total bullshit.

We have satellites able to see folks scurrying around should they have
done so. Our satellites can see inside most buildings to see scurrying
in them.

Where is the support for your constant stream of lame excuses?

I am looking to place an antenna in my attic, I rent in a 2 family house and
the roof is off limits.
Anyway I was thinking of the Scantenna,
Will it work in an attic?
What can I get or build to use one antenna on two scanners?
thanks

Just go down to your local police station and explain how this car is parked in your parking lot/in front of your home/etc... You know that your neighbor is out of town and are curious if the vehicle belongs to a relative of theirs. You, being the considerate neighbor, don't want to have the vehicle ticketed or towed unless the vehicle really should not be there. If they decide to check it out themselves, the vehicle must have moved.

"Q", numerous people in the radio groups have made numerous requests that you not post your off topic items in said groups.

What's the problem here, you just intent on being stubborn, telling them I shall do as I please?

WE prefer to read about radio in radio groups, that's why we subscribe to them.

When we want to read about Iraq, War, etc. we shall go to one of those groups, as you know there are several.

Yes it will work, as long as the area between the roof and antenna don't have anything to impede the signals from getting to the antenna. No foil lined insulation, heavy wiring, you get the idea.

Just a thought..
the antenna that came with the scanners I have are working fine. Uniden bc780xlt and bc895xlt. I was wondering, What if I just put something in my bay window up on the first floor? What can I put there? are there any 3 or 4 foot tall whip type antenna's I can try.
I am not looking forward to running an antenna in the attic. looking for an easy way out.

Hi Anthony,

Two things. I clicked on your website due to its name. Very nicely done. We have the "same point of view" when it comes to toy selection. Although, based on he who dies with the most toys wins concept, you are a head of me right now. :-)

I took a look at the Scantenna and spotted that its overall size is 101 inches. That is 8 feet, five inches. Most ceilings are 8 foot. Your attic may be more (or less). Considering the town you live in and my not knowing where you are in town, you may be in either new or old construction. Older construction may have more than 8 feet at the gable where newer construction is probably 8 feet on the nose.

I guess what I'm saying is measure before you buy. Make sure it will fit.

If you are in older construction where most of the supports are wooden / non-conductive and surrounded by cement and a lot of metal, you may do well.

I don't know what your listening habits are but there should be a lot of action in that region to include eavesdropping on the west side of NYC.

I am fortunate enough to live on a hilltop at the north western corner of the same county you live in. The built in antenna suits my listening needs in my scanner.

For other items, I am a ham and use the G5RV I have strung up in the trees in the woods behind my house.

Hope this helps. Get out the tape measure.

Jim, WB2HBZ

Wow...the police officers in your community must *really* be gullible.

Last time I ran a license plate through NCIC, I had to log in with my name, social security number, password, requesting officer's name, unit, badge number, and reason for the query. All of this is due to people abusing the database like you suggest, and yes, abuse of the system can land you in serious trouble.

And the corny story about the 'parked car' could be construed as false reporting, in itself a criminal act in many jurisdictions.

No thanks!

Just wanted to warn everyone that as a result of one or more anonymous, (of course), whining little girly girls, your ISP will be informed of any postings you make on these groups, albeit totally legal, if it upsets these little weasels.

Recently I sold some radio equipment. Some were for sale here in the groups, and others were for auction on eBay.

If it was for sale here, it was listed as a FS, and if it was for auction, it was listed as a FA, with a simple link to the auction.

Apparently some little pissant mutant didn't like the fact that these postings were made on "their" groups, so they fired off a complaint to my ISP. In this complaint they misrepresented the truth. Well, OK, they LIED!

They told my ISP that I was issuing unsolicited, bulk e-mail of a commercial nature. As far as I know, newsgroup postings, although they may be cross-posted, are NOT e-mail, nor are they bulk e-mail solicitations. Additionally, the private sale of radio equipment is not a commercial service or product as far as I know. I am not a radio dealer, and lord knows, as do we all, that you certainly do not make a profit selling your equipment on the secondary market. Of course, my ISP did not identify the complainant, nor did they supply proof or examples of my alleged infractions. So, I can only assume that the complaint was related to the above, recent for sale, for auction postings.

As a result, my ISP accused me of violating their rules against the bulk e-mail solicitation of commercial services or products in violation of my agreement.
They also stated that USENET newsgroup postings of the same nature are also in violation of my agreement, and if the practice continues, my account will be suspended or cancelled. So much for free speech thanks to the newsgroup Nazis. You can only imagine the content of the return letter I fired off to my ISP.

So, the continued death of these newsgroups, once a great place for debate, discussion, and dissemination of information between hobbyists is imminent at that hands of sorry fools with no life and a huge chip on their shoulder, to be replaced by ads for pornography, and silly political discussions not at all related to the topic of the group, yet continue unabated without a word of complaint that I am aware of.

Many fellow hobbyists acquired very nice equipment from me at very reasonable prices during my latest "spring cleaning". Unfortunately in the future, only those with sense enough to search eBay, or frequent STRONG

SIGNALS will be aware of future sales from me and others.

Apparently, I can no longer post my equipment FOR SALE in ANY newgroup, and that is a shame.

Dan

I USED to enjoy the USENET, radio related newsgroups. I should not have to get a "professional" anything. I did nothing wrong.

I have an outdoor ScanTenna and its the best omni-directional ant I've
ever had. Now I have a friend who put a ScanTenna in his attic. He
had to cut the longest element to make it fit. Since his main interest
was MilAir he cut the longest element down to about 4' (halfwave of 300
MHz). The only thing he possibably lost was VHF-Lo which we didn't
care about in our area. By cutting the longest element the antenna
still worked great. His in his attic would be about 30' above ground
level, mine is mounted outside at only 20' The preform pretty much equal.

Right. Remember how long it took to clean out those government buildings in the US when there was just a little bit of that white powder around from a piece of mail. After a complete evacuation and cleaning, there was still some traces detected and they had to clean again.

No, not for the last several months. They could go anywhere they wanted to without notice. Blix said so.

> in them.

Yes, they claim to know and see when one person like Saddam goes into a building, yet they can't see an entire arsenal of chemical weapons being moved around in trucks.

Have you heard the latest? Now Syria has chemical weapons of mass destruction too. So now the US has to spend more tax dollars destroying that country so that Cheny's company can profit from rebuilding it too.

When are we going to destroy Israel for having nuclear weapons of mass destruction? They are not exactly a peace loving country. At least the whole world would be behind this, as they the UN resolutions that are constantly being tried to pass every year show, but the US is the only one who always uses their veto to stop the resolutions from passing.

> Where is the support for your constant stream of lame excuses?
>
> As for the "imaginary
> > line", there were plenty that picked-up that radio and cell-phone traffic
> > regarding that.

Of course, and you know that how? The same way that Iraq knows about it, it is constantly stated all over the media. Think for a minute. After how many times of the US saying they picked up information on where Saddam was, or what their plans were, from radio and cell phone traffic, are the Iraqis going to continue giving this information to the US?

The Iraqis use this now as a tool. They say over their radios and cell phones that Saddam is in one building while he is really somewhere else, to see the US response. But the red line thing was completely made up by the retired generals who now are CNN anchor hosts that have no access to current intelligence, but are just speculating on everything. Their theory of chemical weapons when the US passes this imaginary red line was comical before the US ever passed it, because most intelligent people realized that Iraq doesn't have any chemical weapons anymore. If they did, they would have used it on the US. Why save it for it to be found after the war is over and give the US the satisfaction of showing they were right? Saddam and Iraq would never allow that to happen! Before that, they would surely have used anything they had to at least get some satisfaction of killing some of the US troops.

Not using any chemical weapons, but saving them so that the US could find them after the war and make Bush look like a hero is not something Saddam would have allowed to happen. At least give him that much credit.

The problem is people like yourself that keep reading and replying to his posts showing that it really bothers you. Trolls LIVE for that kind of attention. Thanks a lot. Everyone now has YOU to thank for insuring those posts will now continue.

Do as the rest of us do, and just don't reply to ANY posts that are of a nature you don't approve of.

And don't reply to this one either, let the thread die now.
Remember, from now on, don't even READ posts from people like that, if no one clicks on them and reads them, they will go away. Posts like yours showing how angry you are is only like giving them a giant gold trophy and begging them to continue.

I had this guy filtered out a few weeks ago, and thought he was gone. Now thanks to people like yourself, who I have not yet filtered out, I see that this guy is still trolling about. Thanks a lot!

What a two faced SOB. You just jumped on me to responding to the off topic posts.

Here you are, spurting out your gibberish.

Thanks for the input Dave. My blood pressure is fine.
It is just a shame that a few morons ruin it for everyone.

I won't spend any extra money. I simply will not post FS or FA items here
to the loss of the newsgroups. PERIOD.

Will my items still sell? Yes. eBay is great.

Dan

Not at all. Everything I said was right. You just don't like that what you just did was pointed out for what it was and it made you feel embarrassed when you realized it.

> That is the first time I have exercised "my opinion" on the subject.

What does the number of times have to do with anything? It only takes one time to be able to point out that it was hypocritical.

> Don't accuse someone unless you know the facts next time.

The facts are you dedicated an off topic post to bring attention to someone the rest of us have been successful in ignoring, until posts like yours bring them up to our attention again.

> Your pretty fast at pointing
> the finger. You can get it broken off.

Now you are sounding just like the other person. Sort of brings more credibility to the theory that you are the same person, else why would you even dedicate a post or thread to bring the attention to the "other person".

Interesting.

> Now go pester someone else with your BS (bovine stockology).

Thanks for proving my point.

Now on to ignore you as well as your alter ego.

You're right. This is akin to being forced to get permit (and maybe
property tax reassessment) for wanting to put an antenna.

I'm no lawyer, but I thought complainants _have_ to be identified and
the nature of the complaint specified to follow simple due process. I
mean, you can't defend a complaint against which you haven't even seen
the evidence! I wonder if there any lawyer radio people who might be
able to enlighten us here. -JA

You forget how MUCH air there is in Iraq ... and how MUCH
sand there is for those molecules to stick to BEFORE they
get to any sensor.

>Their manufacture has many other signatures - buildings with tell-tale
>characteristics, processes with tell-tale indicators.

Unless you work underground or intentionally
disguise the chemical works. As for bio weapons,
they can be made most anywhere and have no
archetectural fingerprint.

>You can make a point of trying to hide - but you can't really do it.

Sure you can.

Actually, the hiding doesn't even have to
be *perfect*, just good enough to ensure
a state of doubt.

Anyway ... everybody was screaming how the
UN inspectors really needed several extra

months to do even a half-assed survey -
well, the US/UK people will need time too.
Give it a month or two - THEN complain if
need-be.

>able to enlighten us here. -JA

I am not a lawyer, though one of my kids is and I play one on
Usenet now and then.

The ISP didn't *do* anything... therefore they have no obligation
to identify anyone.

Without actually seeing the email that Dan received from the ISP
it is difficult to determine exactly what position they actually
are taking. Clearly he is justified in his anger, but the devil
is in the details that were not provided. It sounds as if what
he actually received was a "boilerplate" response meant to fill
all cracks and crannies while not actually taking any real action
at all. What they did was "warn" (their term) him (or in his
terms, "threaten" him) in a way that leaves no doubt they don't
want him to do any of those nasty things, even if he has never
done them before but most certainly if he has.

The wording is chosen that way so that they do not have to
actually spend any time or money investigating the truth of the
complaint. They are off the hook, no matter what happens. If,
as is likely in Dan's case, there never was any real problem...
well they didn't do anything so they are not in any trouble for
taking a wrong action. If the complaint had been correct, well
they are off the hook on that one too, because if the miscreant
continues they can honestly say they issued a warning.

I do hope that what Dan told them was that *if* they ever so
much as lift a finger in any way that causes him damages, they
had damned well better make sure of their reasons first, because
they *will* be explaining it to a judge. It helps if you can 1)
provide an attorney's name to forward future correspondence to,

or 2) better yet, have said attorney send the letter explaining
that scenario to them.

Anthony B. <wAWdncFs85c3gwGjXTWcqA@comcast.com>...

^ ... What if I just put something in my bay window up on the first floor?
^ What can I put there? are there any 3 or 4 foot tall whip type antenna's
^ I can try.

Make your own wire antenna. I listen to frequencies in the areas of 40 MHz, 120 MHz, 150 MHz, 300 MHz, and 860 MHz all with a six inch dipole I made. Get enough RG-58 coax to run from your radio to the top of your bay window. One end of the coax should have a connector that will attach to your radio's antenna connector. At the other end of the coax expose about an inch of both the shielding and the center conductor and attach a length of speaker wire to each. The lengths are not really important since the radio will only be receiving, not transmitting. Align the two lengths so that they are roughly in a vertical line, then tape the antenna somewhere high and where it will not be an eyesore.

```
|
|
|
=======
|
|
|
```

= Coax
| Speaker wire

The above is the minimum that should be necessary for most local stations that you listen to. You could do more but the important thing is that the antenna be placed where it will be exposed to RF signals.

If one of the stations you listen to has a very weak signal you may wish to cut your speaker wires to a length more suitable for that frequency.

Frank

If you are talking about RR, then they don't care. I have a honeypot
mailserverthat received 100.000+ e-mails a day from some of their
customer adresses, and they just ignores it.

Guess the problem is that you dp not have a pink slip contract
(standard UUNet practice witg spammers).

You need to find some information first. There are essentially three types of radio systems your local police etc may be on.

1. conventional
2. trunked (some trunked will do conventional also)
3. digital with the sub group of digital that you cannot at the current time pick up at all

You need to find out which since it will dictate what type of scanner and the cost. An older conventional scanner you can get very cheap, digital can run as high as $700, trunked in the middle. If your area is trunked you need to find out which kind of trunked, there are a few different kinds. The best scanner resource on the Internet is http://www.strongsignals.net.

There are message boards over there where you can find out what kind of radio system your area has and what the frequencies are.

That means the asshole wins. Why not fight?

However, I would note that Dave is not correct in what he says.
First off, he posts from a Statestreet IP address, so an ISP is
not really hidden. But look at the efforts he goes to to remain
anonymous! He has no email address showing, and has an
X-noarchive header.

You obviously can't sell anything with an article posted like
that! Paranoia is not the answer...

The real answer is grow (up, with) a thick skin. If some
asshole complains about *valid* articles being posted, *IGNORE*
the twit and go on with life. Just make damned sure the
complaint really is groundless (though that is the wrong way
to correct someone any way), because if you _are_ wrong, then
you are the twit. And to be honest, trying to figure out what
is "right" on Usenet is not easy at all. Years ago it was,
because 99.99% of all users knew and were doing it right. But
today 50% of the users don't have any idea why something is
right or wrong, 50% of those are doing it wrong and setting a
bad example. Just look at all the complaints about "don't
crosspost"! They don't know what "multipost" means...

My understanding (based on your description only, as I didn't
go look at your previous postings) is that what you posted was
exactly correct. The *best* thing you can do is to *continue*
to post correctly, thus providing a good example for others.

I'd be real interested in seeing an exact copy of what your ISP
sent you too! It's too late now to give specific
recommendations as to a response, but others might be interested
for future use. BTW, I was once upon a time a consultant to an
ISP, and amongst the things they consulted with me about were

complaints such as you've described. There were three of us
that would discuss the options, and then the head honcho would
do what he felt was right. The best one ever was when I decided
to "get" a particular set of net assholes who were using a
secret mailing list to bully a newsgroup (coordinating attacks
on newbies in the mailing list!). I found out about it, and
posted several Usenet articles with a signature that had "Spam
targets: xxx.com yyy.com zzz.com" with about a dozen IP
addresses, every other one of which was the address of that
mailing list. I casually told the ISP people they could expect
a complaint, but didn't say why. You'd have loved the laughter
it caused when the complaints (two or three) rolled in. These
guys were old friends that had known me personally and on Usenet
both for many years, and lets just say they were very impressed
by my ability to poke assholes with a sharp stick!

:-)

I have two BC780XLT's, I also have 2-BC9000's, along with many other radio's. My question is, how do you get priority to work in conventional mode?
Its working fine in trunk mode, but it doesn't want to come on while in conventional mode.
I select the priority channel, turn the scan on, press the PRI button, and nothing!
Any idea's would be greatly appreciated.

thnx
Lou

> the plate and just give me the insurance co. The cop handed me the entire
> printout with everything.

That's a little different from an ambigious request for a plate on the basis of a made up story written to make it look good for the police to use. You had the guys name and address and stated clearly and distinctly that the reason for the search for the insurance carrier was because of an accident. The information no doubt included both your and his driver license number, so there wasn't much suspicion on part of the cop. Besides if the other person contested the search, the cop would be implicated.

So getting back to the original non scanner nature of the post..

Someone wants an unknown usenet user to run a Michigan registered plate and does not state the reason, and no doubt someone's job would surely be at risk, not to mention a fine?

Somethin' ain't right on that one. If I had access to the registration system, I wouldn't do it.

Anywho.. Getting back to scanners, what would be a good mobile antenna? A Firestick on a magnetic mount? I have
a small mag mount antenna, but it seems to be deterioating in quality as a rubber ducky antenna I bought for my BC245XLT

does alot better than the cell phone like wire antenna I bought for $20.00

How about an equivalent indoor antenna for my BC780XLT? I don't want a spider web of antenna inside the apartment,
but a good pwoerful indoor one that would replace the telescopic antenna that the 780 came with.

I like the 780XLT in my truck, but the 245XLT can bring in a larger spread of frequencies such as the airport when the
780XLT can't.

Any ideas??

It is probably ISRS radios...my unit has been using them since around 1999.
They look just like FRS and TX with 500mW, except they utilize 380-395MHz.
Personally I hate the audio on them (small dynamic range) but then again we
still use some of the original ones ever made and I suppose the newer ones
are improved.

Have you found a way to repeal the law of reciprocity?

I do not agree with your statement. A number of wires cut to the center of each band of interest and attached as you would your six inch pair would be much more effective.

To imply that the requirements of an antenna differ for receiving is simply incorrect.

Actually did that to my best friend on a wet and cold day when I was a
teenager once.

The local RCMP detachment had a ghost car of the same year and model and
almost the same colour as my Dad's
1973 Plymouth Gran Fury. The RCMP back then always had the big boats.

I saw my best friend (who like me knew the local police cars, both marked
and the two ghost cars they had) in front of me driving his mon's car, so I
sped up a bit to catch up with him but stayed back a car length, and
snapped on the high beam lights.

He was obviously startled as he slowed down to just exactly the speed limit.
The rear window was partially fogged up
so he could see the car, but not in exact detail. He turned and I turned. He
went straight and I went straight. He kept to
exactly 30 MPH, I kept exactly to 30 MPH.

He pulled into a store and stayed there. I pulled into the store behind him.

He never moved as I carefuly walked up along the left side of the car.

He just got his driver's licence a month before.

He actually thought I was the local police and said he figured I was the
RCMP ghost car as he could see most of it
in the rear window.

You should have heard him swear. He was usually pretty quiet but boy did he
honk those swear words.

Had a great laugh over it though 8-)

Wrong. Only so - called "high - persistence agents" "stick," as you put it.
Hey, I actually remember something from my NBC days!

> get to any sensor.

No. Literally the next breath you take will contain molecules from the
dying breath of Julius Ceasar. No shit. That is because there are a
truly amazing number of molecules in a given volume - molecules are real
tiny and real numerous. Thus one or two or three of them will be
floating about. In a lab which produced bio-chem weapons. Such that a
sample taken from a suspected site will contain the tell-tale evil stuff
- if such stuff was made there.
>
> >Their manufacture has many other signatures - buildings with tell-tale

> archetectural fingerprint.
>
They leak. They have other signatures that our billions spent developing ways to detect them can detect them.

The notion that Iraq could make such weapons in volume sufficiently to threaten us, without detection, is laughable.

But it works as a con to trick folks like you into supporting a "defensive" war - so the Bush Administration trotted it out - despite how completely absurd the argument is.

> >You can make a point of trying to hide - but you can't really do it.
>
> Sure you can.

No. Bio-chem weapons sufficient to threaten us must be made. Making them is detectable. Molecules inevitably leak - so as to be detectable by our sensors in Satellites, on the ground, in U-2 planes, and so on.

We have zero evidence of production.

It is POSSIbLE Iraq has invisible Martians hidden in caves - or that they have such weapons made without detection yet in volume sufficient to threaten us - but I don't think the odds are good for that.

>
> Actually, the hiding doesn't even have to
> be *perfect*, just good enough to ensure
> a state of doubt.
>
You are the one proposing that Iraq has Martians.

Shouldn't you provide some proof?

> Anyway ... everybody was screaming how the
> UN inspectors really needed several extra
> months to do even a half-assed survey -
> well, the US/UK people will need time too.
> Give it a month or two - THEN complain if
> need-be.

We have been looking at Iraq for many years, with devices costing billions.

Not a shred of evidence that those Martians are really there. OR that WMD are really there.

Could be the place is loaded with Martians or WMD - but I am skeptical, given that our sensors have turned up - zip.

2867. Re: BC780XLT Priority Scan in conventional mode?

Newsgroup: rec.radio.scanner
Date: 2003-04-16 02:32:06 UTC
From: Jerry <fccgrant@nospam.yahoo.com>
Message-ID: <3E9CC0A7.349B4BD9@nospam.yahoo.com>
Source record: 32781

Select the channel you want to have the priority set on.

Press and hold the PRI key until you hear 3 beeps and the P indicator is on
for the selected channel.

Verify that PRI is displayed on the LCD screen.

Unsquelch the receiver while it is in scan mode. If the scanner switches to the priority channel
set in the bank you are in then it is working. (I believe you can have a priority channel in each
bank.)

You will need to find out what frequencies are in your area. This can be done by going to the FCC
web site and searching out the town you live in or by using a search engine for the state / area of
interest.

The next thing will be to find out what kind of radio systems are in your area. Again, a search
engine will be pretty helpful here. If it is your run of the mill radio system then you may be able
to get away with an inexpensive scanner. If your area has a 'trunked' system then you will have to
pony up some additional dollars.

What state/area are you in? This may help to get more knowlegable people in the area to assist
further.

Dr. Fred Hambrecht Sr <v9p93lg74cfh91@corp.supernews.com>...

^ I do not agree with your statement.

I have been using wire antennas of arbitrary length for more than ten years and in several geographic areas and I have never not been able to adequately receive any local station. When dealing with weak signals the antenna characteristics become more important, but for most people an expensive antenna is unnecessary. In many cases a finger across the antenna connector provides a sufficient receive antenna.

Go to Walgreens and buy a $5.00 am fm portable. I would not pay another 50 or 100 dollars for a scanner to have it locked on an am/fm radio station.

Rest assured that I was tempted to do just what you suggest, however, this is the BEST internet service I have ever had.

It is cable service, and works flawlessly. They have a monopoly in this area, so it's there way or the highway. Do not want to go back to DSL as it was a horror.

Yes, and just think how funny it would have been if a *real* bad-ass had stolen your friend's car and, upon seeing you approach, pull out a 12-gauge shotgun and decorate the area with your intestines!

Now, getting back to the topic <g>, does anyone have a good mobile magnetic antenna solution for a PRO-95? Nothing too ostentatious, of course.

I doubt that would have happened. We were in a western Canadian small town (9,000 people) about 25 miles from one of our larger cities , and that type of gun stuff rarely happened if at all. The small town was not even on the major east west route into the city. It was at the time - during the 1960's - when everyone left their front door open duringhte summer and kept the screen door closed and there wasn't any fear of robberies, etc. It was a real safe small town, heck even in the larger city there was very little gun violence compared to the U.S.

Lloyd, what makes you think a ham operator was involved? He said nothing about ham operators and his message was not posted to a ham radio newsgroup (two scanner newsgroups, one shortwave, and one swap). If anything, you should be looking for your "suspect" in one of the groups he listed.

> They act that way on the ham band also. (snip)

The FCC strongly encourages the concept of self-policing by operators in the ham radio frequencies. Most operators agree with that policy because it is in their own best interest and the absence of policing is not.

The use of those frequencies by illegal operators, for example, results in the loss of the frequencies used by those illegal operators and often the use of neighboring frequencies due to the poorly designed or poorly modified equipment so often used by illegal operators. As such, ham operators have a clear reason to keep illegal operators off their allocated frequencies. Self-policing provides a means to do that.

Was reading an article about just that - they were trying to make the same point you did, and the experts they questioned stated that it's not as easy as that - for example, there are biological entities all over the room you are in right now. Look at the false positives they've already had. There was also a segment on the news about this. Also, if you've ever been to that (or any other) desert, you know how the winds are.
Second point - the search for WMDs is really just starting - that was NOT part of the operational plan (combat). The coalition didn't send in weapons inspectors, they sent in SOLDIERS.

> We here countless excuses as to why we have never seen a single WMD, nor

Existing detection systems have tended to be fairly large and not terribly accurate, and to require humans to operate them.
While many of the technologies show promise and while dozens of research groups in the United States and elsewhere chip away at refinements, it will take much more time and effort to produce a truly reliable battlefield detector.
(Christopher Aston, New York University Medical Center)

The components of biological warfare are found in nature, in the soil, in the air and even inside human beings. The presence of these organisms does not necessarily connote a sinister motive. They are used for many peaceful purposes such as routine studies against disease, the creation of vaccines, and the study of defensive measures against a biological attack. Components of biological weapons are, by nature, dual use. Operators of clandestine offensive BW programs can claim any materials are for peaceful purposes or easily clean up the evidence by using no more sophisticated means than household bleach. Detecting violations is nearly impossible; proving a violation is impossible. Traditional arms control measures are based on detecting violations and then taking action -- military or diplomatic -- to restore compliance. Traditional arms control measures are not effective against biology. Using them, we could prove neither non-compliance nor compliance.
John R. Bolton, Under Secretary for Arms Control and International Security

Andrew McGill, head of the functional materials and devices section at the Naval Research Laboratory, also talked about pattern recognition. The sensors he described are based on sorption vapor detection. In these sensors, an analyte-selective coating is placed on a resonant transducer such as a surface acoustic wave device. Shifts in the device resonant frequency that occur when target compounds are sorbed to the polymers coating the surface allow the detection of vapors and gases. Arrays of devices coated with different sorptive polymers are needed to generate "nose" prints of gases. These patterns, when combined with pattern recognition techniques, allow identification of target analytes.

Array sensors are "dumb" without training, McGill pointed out. The interferences expected for a given application are an important part of that training. The range of potential interferences increases greatly when the application is homeland defense rather than military. "The answer," McGill said, "is not a single technology, but orthogonal technologies."

As fermentation technology continues to improve, detecting the clandestine production of BW agents at dual-capable facilities, such as vaccine plants, will become even more difficult. Continuous fermentation tanks can produce militarily significant quantities of a pathogen from a seed culture in a matter of days.

Advanced biopharmaceutical plants use "clean-in-place" systems that flush fermenters and pipes with microcidal chemicals and hot water. Such systems could eliminate all traces of a BW agent in a few hours. Thus, even short-notice inspections may not turn up conclusive evidence of illicit production.

Outline of the UN Inspections Mechanism in Iraq
Victor Mizin, Senior Research Associate
Center for Nonproliferation Studies
March 2003

The UN inspections and monitoring mechanism in Iraq was recently reinforced in November 2002 by the adoption of Security Council Resolution 1441 (SCR 1441). Prior to SCR 1441, the United Nations Security Council set forth the scope of WMD inspections in SCR 687 (1990), which specified cease fire plans and detailed Iraq's obligations to destroy all chemical, biological, and nuclear weapons, and all missiles with a range in excess of 150 kilometers.[1] Iraqi non-compliance with SCR 687 included an extensive and officially sanctioned network of deception, denial, and, at times, physical disruption of the inspection process, which led to subsequent UN resolutions.[2] Additionally, the Iraqi final, full, and complete disclosures (FFCD) of WMD capabilities repeatedly fell short of what inspections actually found and what transpired according to defector reports and other intelligence sources.[3] Questions remain regarding nuclear, chemical, biological, and missile systems that are still unaccounted for or that lack any official Iraqi documentation certifying their destruction.[4]

More than 10 years after the Gulf war, gaps in Iraqi accounting and current production capabilities strongly suggest that Iraq maintains a stockpile of chemical agents, probably VX,[3] sarin, cyclosarin,[4] and mustard.

Baghdad never supplied adequate evidence to support its claims that it destroyed all of its CW agents and munitions. Thousands of tons of chemical precursors and tens of thousands of unfilled munitions, including Scud-variant missile warheads, remain unaccounted for.

UNSCOM discovered a document at Iraqi Air Force headquarters in July 1998 showing that Iraq overstated by at least 6,000 the number of chemical bombs it told the UN it had used during the Iran-Iraq War-bombs that remain are unaccounted for.

Iraq has not accounted for 15,000 artillery rockets that in the past were its preferred means for delivering nerve agents, nor has it accounted for about 550 artillery shells filled with mustard agent.

Baghdad continues to rebuild and expand dual-use infrastructure that it could divert quickly to CW production. The best examples are the chlorine and phenol plants at the Fallujah II facility. Both chemicals have legitimate civilian uses but also are raw materials for the synthesis of precursor chemicals used to produce blister and nerve agents. Iraq has three other chlorine plants that have much higher capacity for civilian production; these plants and Iraqi imports are more than sufficient to meet Iraq's civilian needs for water treatment. Of the 15 million kg of chlorine imported under the UN Oil-for-Food Program since 1997, Baghdad used only 10 million kg and has 5 million kg in stock, suggesting that some domestically produced chlorine has been diverted to such proscribed activities as CW agent production.

Fallujah II was one of Iraq's principal CW precursor production facilities before the Gulf war. In the last two years the Iraqis have upgraded the facility and brought in new chemical reactor vessels and shipping containers with a large amount of production equipment. They have expanded chlorine output far beyond pre-Gulf war production levels-capabilities that can be diverted quickly to CW production. Iraq is seeking to purchase CW agent precursors and applicable production equipment and is trying to hide the activities of the Fallujah plant.

After four years of claiming that they had conducted only "small-scale, defensive" research, Iraqi officials finally admitted to inspectors in 1995 to production and weaponization of biological agents. The Iraqis admitted this only after being faced with evidence of their procurement of a large volume of growth media and the defection of Husayn Kamil, former director of Iraq's military industries.

Baghdad did not provide persuasive evidence to support its claims that it unilaterally destroyed its BW agents and munitions. Experts from UNSCOM assessed that Baghdad's declarations vastly understated the production of biological agents and estimated that Iraq actually produced two-to-four times the amount of agent that it acknowledged producing, including Bacillus anthracis-the causative agent of anthrax-and botulinum toxin.

The improvement or expansion of a number of nominally "civilian" facilities that were directly associated with biological weapons indicates that key aspects of Iraq's offensive BW program are active and most elements more advanced and larger than before the 1990-1991 Gulf war.

The al-Dawrah Foot-and-Mouth Disease (FMD) Vaccine Facility is one of two known Biocontainment Level-3-facilities in Iraq with an extensive air handling and filtering system. Iraq admitted that before the Gulf war Al-Dawrah had been a BW agent production facility. UNSCOM attempted to render it useless for BW agent pro-duction in 1996 but left some production equipment in place because UNSCOM could not prove it was connected to previous BW work. In 2001, Iraq announced it would begin renovating the plant without UN approval, ostensibly to produce a vaccine to combat an FMD outbreak. In fact, Iraq easily can import all the foot-and-mouth vaccine it needs through the UN.

The Amiriyah Serum and Vaccine Institute is an ideal cover location for BW re-search, testing, production, and storage. UN inspectors discovered documents related to BW research at this facility, some showing that BW cultures, agents, and equipment were stored there during the Gulf war. Of particular concern is the plant's new storage capacity, which greatly exceeds Iraq's needs for legitimate medical storage.

The Fallujah III Castor Oil Production Plant is situated on a large complex with an historical connection to Iraq's CW program. Of immediate BW concern is the potential production of ricin toxin.[7] Castor bean pulp, left over from castor oil production, can be used to extract ricin toxin. Iraq admitted to UNSCOM that it manufactured ricin and field-tested it in artillery shells before the Gulf war. Iraq operated this plant for legitimate purposes under UNSCOM scrutiny before 1998 when UN inspectors

left the country. Since 1999, Iraq has rebuilt major structures destroyed during Operation Desert Fox. Iraqi officials claim they are making castor oil for brake fluid, but verifying such claims without UN inspections is impossible.

UNSCOM uncovered a document on Iraqi Military Industrial Commission letterhead indicating that Iraq was interested in developing mobile fermentation units, and an Iraqi scientist admitted to UN inspectors that Iraq was trying to move in the direction of mobile BW production.

Iraq has now established large-scale, redundant, and concealed BW agent production capabilities based on mobile BW facilities.

Baghdad has established a large-scale, redundant, and concealed BW agent production capability, which includes mobile facilities; these facilities can evade detection, are highly survivable, and can exceed the production rates Iraq had prior to the Gulf war.

Baghdad in 1996 negotiated with UNSCOM Executive Chairman Ekeus modalities that it used to delay inspections, to restrict to four the number of inspectors allowed into any site Baghdad declared as "sensitive," and to prohibit them altogether from sites regarded as sovereign. These modalities gave Iraq leverage over individual inspections.

Iraq generally accommodated UN monitors at declared sites but occasionally obstructed access and manipulated monitoring cameras. UNSCOM and IAEA monitoring of Iraq's WMD programs does not have a specified end date under current UN resolutions.

Iraq was negotiating contracts for procuring-outside of UN controls-dual-use items with WMD applications. The UN lacks the staff needed to conduct thorough inspections of goods at Iraq's borders and to monitor imports inside Iraq.

Baghdad consistently sought to impede and limit UNSCOM's mission in Iraq by blocking access to numerous facilities throughout the inspection process, often sanitizing sites before the arrival of inspectors and routinely attempting to deny inspectors access to requested sites and individuals. At times, Baghdad would promise compliance to avoid consequences, only to renege later.

SCR 1441 returns to previous requirements imposed on Iraq under resolutions SCR 707 (http://www.un.org/Depts/unscom/Chronology/resolution707.htm) and SCR 715 (http://www.un.org/Depts/unscom/Chronology/resolution715.htm). This stringent approach was eroded by the conclusion of the "special arrangement" between Iraq and the United Nations. The United Nations was anxious to give Baghdad some incentives to comply by conceding to narrow the scope of the UN's mandate by inhibiting inspections of "sensitive sites--presidential palaces and premises related to national sovereignty" and requiring inspectors to give 24 hours' notice prior to inspections. SCR 707 recognizes Iraq's material breach of resolution 687. A number of serious violations occurred, including failure to provide full, final, and complete disclosure of all aspects of its WMD and missile programs at the start of UNSCOM's

inspections in 1991.[9]

There are no signs that Iraq has dismantled its concealment mechanism, which has been used to avoid Security Council-imposed obligations over the past twelve years. This period of time allowed Iraq to fine-tune the means of deception by surveying and studying the inspectors and the inspection process.[18] It is an organized and comprehensive system sanctioned by the highest level of Iraqi leadership and implemented by the Iraqi National Inspections Directorate, Iraqi secret services, specifically the Special Security Organization, and its Special Republican Guard.[19] The Iraqi goal is to bog down the inspections process while providing, from time to time, insignificant pieces of evidence to demonstrate its cooperation, so that it will be able to retain its WMD capabilities and related assets, and finally to have sanctions lifted by the Security Council, which will be forced to do so in the absence of any major discovery by UNMOVIC. According to Dr. John Yurechko of the Defense Intelligence Agency, "It's a highly centralized effort. The program encompasses intelligence and security services, the Special Republican Guard, the military-industrial commission, and the ministry of information."[20] Concealing weapons facilities in residential areas, mosques, hospitals, or underground facilities and presenting fraudulent declarations in violation of Security Council resolutions represent normal Iraqi behavior during inspections.[21]

Regarding chemical weapons:

Once the Western militaries figured out that CW agents were being used in attacks, the implementation of simple protective measures (masks) made chlorine by itself largely ineffective throughout the rest of the war. Furthermore, being gaseous at room temperature, these toxic compounds quickly dissipated into the atmosphere. Until mustard was introduced in 1917, the myriad CW agents used at the time were largely incapable of causing much injury except through inhalation.

The term "dusty mustard" or "dusty VX" refers to the use of a carrier particle such as talc or diatomaceous earth in order to form a particulate aerosol out of these liquid agents. There are commercial applications for similar preparations, such as insecticides used in households and gardens against pests such as ants, fleas, and ticks. Ortho® Ant-Stop, for example, uses an organophosphate (chlorpyrifos) insecticide impregnated on an inert carrier that is safe for use around mammals and people. This dust is prepared in a relatively fine particle size distribution,[24] and can be delivered into tight spaces. The dust finds its way into nooks and crannies that other types of delivery could not reach.

Steven D. Christesen, a research chemist at Edgewood Chemical Biological Center, Aberdeen Proving Ground, in Maryland, discussed the use of Raman spectroscopy to detect nerve agents, mustard gas (a blister agent), and cyanide (a blood agent) in water samples. Christesen reported that the lower limit of detection for CN- is roughly 2 ppb, which is lower than the military's detection goals, but added that the measurements exhibit poor reproducibility. He proposed that the inconsistencies may be due to subtle

differences in the surface properties of the metal substrates. Mustard gas can be detected at concentrations as low as 50 ppm, Christesen said, but it hydrolyzes quickly to thioldiglycol, low levels of which are not easily detected.

Highly sensitive detection methods already exist for some analytes. Yet the all-in-one field-portable detection tool desired by the military has still not been developed.
(MITCH JACOBY, C&EN CHICAGO)

> We have satellites able to see folks scurrying around should they have
> done so. Our satellites can see inside most buildings to see scurrying

Even the Iraqis know when the satellites are overhead. How do you think terrorist training camps hide? Do you have ANY idea what it would cost to have enough satellites to watch every inch of Iraq every moment of the day? Use your head.

> Where is the support for your constant stream of lame excuses?

Learn to read a bit, and do some research.

That is your interpretation of the purpose of this newsgroup. My interpretations - a means of communications between scanner users or a place for scanner users to gather to discuss whatever is on their minds - are just as valid. Regardless, since both of us easily control what messages we read, there is room for both interpretations. If you don't like messages with scanner users discussing politics, don't read them (nobody is forcing you to do otherwise).

Dan has a lot of opinions that I find obnoxious. He posts them
to Usenet.

But, because of what you said above, I just did a cursory search
of rec.radio.* articles that he has posted, and didn't find any
that were something he was unlikely to "do in real life", or
that he should have his hands slapped for.

Could you point me at something he has done on Usenet that fits
your requirement that he straighten out his act?

Wow.. your ISP guys are acting stupid.

The vast majority of ISP folks recognize them, and see right
through the whinings of net trolls.

There are these trolls throughout Usenet that pull such stupidity all
the time. Most major ISPs have employees that are savvy enough to know
that they should just ignore such idiots who cannot supply proof to
their claims.

It sounds like you need to get a better ISP anyway!

Best thing is don't get in a pissing contest with these stupid
bastards that roam Usenet with nothing better to do than cuase
trouble, in the first place!

No, the internet is like the wild west. the law is established by
whoever is the most powerful (or THINKS that they are) - in this case,
an ISP who wants to be a god. They set their own rules - usual;ly 27
pages long written by some turd lawyer - and who has time to read it.
You HAVE to agree, or not get the service.

What some ISPs need is MORE COMPETITION.

Dan, the bottom line is DON'T be intimidated by "net bullies."

One thing you need to kow is that THEY are in legal jeopardy if they
THREATEN legal action that they had no real intention of acrrying out.

DON'T let them make you stop posting your FS and FA ads here or
anywhere!

We had a couple of guys on some other groups trying the same stunts a
couple of years ago. They will shut up after a while if you don't roll
over and play dead as easily as they expect!!

Talk to your attorney and turn the tables on the bastard!

Yes, and also, if the end caps or roof eaves are covered with
aluminum siding
then this will cut down on the ability of an antenna's reception, if
it's installed in an attic location.

If the aluminum siding is just around
the four sides of the house and the end caps/roofing are wooden, then a
attic
antenna installation will work great! If you are unable to place a
antenna out side of the dwelling, which would be the best situation
because of the aluminum siding, then try placing the antenna centering
it, inside, in front of a window. If it's a two story house then put the
antenna in a upstairs window!

Iraqis given anthrax secrets by Porton Down scientists

By Shyam Bhatia, Diplomatic Editor

The Observer (Guardian) Sunday January 25, 1998

The father of Iraq's biological warfare programme benefited from a three-day anthrax workshop hosted by scientists from the Government's chemical and biological research centre at Porton Down, Wiltshire.

The embarrassing British link to Iraq's deadly anthrax research, revealed by United Nations sources, comes only days after Foreign Secretary Robin Cook's assertion that Saddam Hussein makes enough anthrax every week to fill two missile warheads.

President Clinton warned last week on American TV: "Think how many people can be killed by just a tiny bit of anthrax and think about how it's not just that Saddam Hussein might put it on a Scud and send it to the city he wants to destroy. Think about all the terrorists and other bad actors who could parade through Baghdad and pick up their stores if we don't take action."

Anthrax toxin is classified as a weapon of mass destruction capable of killing millions within days. Exposure to minute amounts leads to an excruciatingly painful death. UN inspections of suspected storage sites have been suspended because Iraq has blocked access and the chief UN weapons inspector, Richard Butler, says his talks with the Iraqi authorities were characterised by "moments of abuse and denigration" of his staff.

The West's role in providing Iraq with anthrax know-how began at a key workshop in Winchester in 1988. Among 80 scientists from around the world were Dr Nasser el-Hindawi and his assistant, Dr Thamer Abdel Rahman, microbiologists working for Iraq's secret biological weapons programme. The programme's aim was to develop weapons to spread anthrax, gas gangrene, botulism toxin, brucellosis, rabbit foot and tetanus.

Hindawi, who is still active in Iraq, was the academic supervisor of another British-trained Iraqi, Dr Rihab el-Taha, widely known as Dr Death. Taha, trained at the

University of East Anglia, was in charge of the Al Hakam biological weapons factory blown up in 1996 by UN inspectors.

As a professor at Baghdad University, Hindawi was commissioned by Iraq's ruling Baath Party to help develop biological weapons in the shortest possible time. By the time he arrived in Winchester, he had a shopping list of what was needed.

UN officials describe the workshop as a "Who's Who of anthrax research". They say the three-day meeting was devoted entirely to anthrax with "a full exchange of ideas and materials". Among the British participants was Harry Smith, now emeritus professor of microbiology at Birmingham University. A world authority on anthrax, he says: "To be perfectly frank, I didn't know [the Iraqis] were there."

"My God, it's quite astounding that no one caught on," said Dr Alastair Hay, reader in chemical pathology at Leeds University, who has been following Iraq's chemical and biological programme. "By 1985, Iran had already accused Iraq of carrying out chemical warfare and Iraq's interest in weapons of mass destruction had already been flagged up. Why bring these people here?"

UN inspectors say the Iraqis launched their biological warfare programme in mid-1986 at Salman Pak, outside Baghdad. Soon after, the Iraqis started large-scale production of anthrax for deployment in bombs and Scud missiles.

Germ culture to grow the anthrax was freely imported from the US military's centre for chemical and biological research at Fort Detrick, Maryland, via civilian laboratories operated by ATCC, the American Type Culture Collection.

American investigators have established that several shipments of biological material, including 21 batches of anthrax, were licensed for export from the US to Iraq between 1985 and 1988. They were sent to the Ministry of Higher Education and the Ministry of Trade in Baghdad.

Listening to the scanner will do no good if the patrol car has a computer in
it.

I can't believe that someone would make such a request.
No police officer is going to put his job on the line for any one.

Because they are kind? Besides, they are running ONE plate and the chances
of getting caught doing that are basically zero... And why, well if someone
can guaranty the info, I will explain the reason why, and then they can
decided for themselves... All you have to do is ask, it's not that hard is
it? I'm not going to type a whole story for everyone to read, they don't
need to know. The only one that needs to know is the one whole would be
supplying the info...

If your that bent on a groups like that, then create one! I bet you will be
the only person posting in it as those that are interested in talking about
scanners will do it here, and those interested in talking about politics
will do that in an appropriate group for such discussions...

The reason isn't given because the whole world doesn't need to know. The
only person that needs to know is the one that is willing to get me a lousy
name... Plain and simple.

Honestly, if it's anything like around here, there wouldn't be any problem at all with it... Around here they radio in a plate and ask for the info, give their location, and that's it.. Plate info comes back, no questions asked, nothing suspicious at all... Just an everyday routine thing.

> Wrong. Only so - called "high - persistence agents" "stick," as you put it.
> Hey, I actually remember something from my NBC days!

Do they float?

THere are many signatures from making WMD - we have failed to find even
one.

We have spent lots of money learning how to listen in to phone
conversations, to listen in to conversations in buildings, we have
agents, we have cameras looking down, vibration sensors seeking specific
patterns indicative of making certain things.

Now how does Saddam make all these indicators - molecules floating and
sticking - or just landing on the floor or on tables, sticky or not -
the vibration patterns, the visual signs seen from above, the
conversations thought to be private - follow the bouncing ball to hide
the stuff when an inspector is discovered to be driving over to the old
WMD plant?

Why do you persist in believing something so implausible?

> inspectors, they sent in SOLDIERS.

That's false. We created special teams with super high tech devices
specifically to find sites immediately. They have been scouring the
country from the very first day - probably even before the first day -
looking for WMD. Not a single WMD has been found - despite all our
spying information gleaned from many years of spying on Iraq.

Finding WMD rapidly is one of our HIGHEST priorities in this war.

Almost up there with guarding oil assets from looters.

You can always use a mobile whip but the Super Discone Antenna
http://users.cis.net/kingpop/Superdiscone.htm is only 3 feet tall and
should work just fine in your attic or in a window.

Hey Dan, just a thought.. Start your own news group and call it "stuff 4-sall" hehehe that should shut the damn nazy's up :-)I to had a problem by posting a antenna test we did in alt.radio.scanner some child with the nic of me was yelling off topic off topic warz scammer, I have no idea what a warzs scammer is but I thought most scanners needed an antenna to work?? Us guys here in the office are trying to figur-out what he was yelling about. Then one of the guys pointed out He's just a 10 year old looking for attention because his mommy don't love him.. Any way my point is you will always find a discontented child looking for attention no matter what you do on the net.. So the only way to stop this is a simple one, i.e. start your own news group and you moderate it :-) just delete there crap..

George.

>if such stuff was made there.

You are assuming we have sensors sensitive to
single-molecule quantities of the various types
of nerve gasses. Note also that these substances
degrade in the presence of oxygen, ozone, moisture

and chemicals like chlorine. After a thorough job
of decontamination, plus a year or two, there may
not BE a single molecule of VX left intact. We
would then have to have a sensor for the breakdown
products ... which may be the same as for a number
of ordinary insecticides.

>> >Their manufacture has many other signatures - buildings with tell-tale

>>
>They leak. They have other signatures that our billions spent developing
>ways to detect them can detect them.

I think you're vastly over-estimating the sensitivity
of availible detection techniques and vastly under-
estimating the sheer SIZE of the sampling problem.
Hell, they couldn't even track-down our local anthrax
mailer - and they *really* wanted to.

>The notion that Iraq could make such weapons in volume sufficiently to
>threaten us, without detection, is laughable.

You're overestimating our intelligence-gathering
capabilities. North Korea was able to put together
an entire uranium-enrichment program completely
undetected ... and that was with UN(/cia) inspectors
milling around the area.

>But it works as a con to trick folks like you into supporting a
>"defensive" war - so the Bush Administration trotted it out - despite

We've been through this already ...

>It is POSSIbLE Iraq has invisible Martians hidden in caves - or that
>they have such weapons made without detection yet in volume sufficient
>to threaten us - but I don't think the odds are good for that.

It's the VOLUME, or potential volume, that's of
most intererest to me. To justify a large invasion
like we did, there had better be a LOT of the evil
stuff - militarily-significant quantities - or the
capability to MAKE such amounts quickly (1-6 month
timeframe) from precursors.

If the quantities are piddly, a sneakier, 'low impact',
method of deposing Husseins government should have been
used. Hussein STILL deserved his fate, but the need for
such a large-scale effort wouldn't have been there since
he wouldn't have had the stuff to retaliate with.

>> Actually, the hiding doesn't even have to
>> be *perfect*, just good enough to ensure
>> a state of doubt.
>>
>You are the one proposing that Iraq has Martians.

No ... but I've got a neighbor who is into UFOs.
Ask him that question.

>Shouldn't you provide some proof?

You are the one going against what several large
'democratic' governments have told us ... I'd say
the burden of proof may be yours.

However, Bush/Blair & Co are gonna have to produce
proof themselves within the next month or so - and
nobody is gonna just take their word for it. They
are going to have to satisfy rather a lot of other
governments and their internal critics too.

>> Anyway ... everybody was screaming how the

>We have been looking at Iraq for many years, with devices costing
>billions.

Well, they may have COST billions ... but that's
government contracts for you :-)

>Not a shred of evidence that those Martians are really there. OR that
>WMD are really there.

I think we're not the all-seeing/all-knowing power
that we like others to believe we are.

>Could be the place is loaded with Martians or WMD - but I am skeptical,
>given that our sensors have turned up - zip.

Hopefully it was the martians, not vandals, who
nabbed all that stuff from the museum. We would
have a better chance of getting it back ...

In Sweden the registrant of a car is a public record, available to
anyone (even Americans).
Why is it against the law in most (American?) jurisdictions?
Any given reason?

Dan,

You'll never stop them. People ask me all the time why I am anonymous, well this is one reason why. I want to be able to speak freely, on whatever subject, in whatever NG, whenever I choose. Being anonymous allows this.

As for your ISP, I really wouldn't worry about the letter. It's just "don't sue us" material - if you started posting kiddie porn or other nasty stuff and they got sued over it, they could produce that letter and say they were doing their part to prevent it. Chances are that's all it is.

Bottom line is they want and respect your monthly service payments much more than a complaint or two from some cowardly bozo.

Change your header info and go undercover - you'll be glad you did and then the trolls can go pick on their own kind over in alt.retards.

Anthrax is a naturally occurring substance found in soil, therefore you
can't just swab for it, it will appear naturally, it becomes worrying
when concentrated and weaponised. To be honest, I think that there
probably was a red line, but the Iraqi's saw what was coming and decided
it wasn't worth it, hence the poor attempt to defend Baghdad.

Hey I just bought me a ham radio HT from a buddy of mine. It's cool - I can use it like a scanner and listen to the cops but it won't transmit on their channels. I want that ability in case I spot a drunk or a burglar while I deliver my morning newspapers. Can I modify my HT to do this?

Thanks!
Davey

Turn it around; if the US/(UK?) people need so much time,
why did they refuse it to the UN inspectors?

Howdy 'dog. How you gonna mount that on your ATV? :-)
How much $$ do you have to spend on one?

Can't go wrong with a Uniden BC780xlt for around $225-$270. Or for a bit
more you can get the new BC785D without the digital card for around $350.

Absolutely, I would be sure to make sure you have the repeater input freqs for all the cops within 100 miles.

The police really enjoy having those reports coming over their freqs. Be sure when you modify it you say "Testing 1...2...3 " at least twenty times in a row. Some of the hard nose supervisors will get upset, ignore them as you want as many folks as possible to respond. After all it is your right to the airwaves, haven't they learned anything from CB?

Next you need to get known, so first get a catchy unit number i.e. "Batman77" or what ever suits your personality. Be sure to report every violation you see, show them you are a serious, concerned citizen.

Find the local code for "officer down"and use it at the beginning of all your transmissions. This will insure your transmissions are not interfered with by mundane stuff, such as a 7-11 robbery.

Do not be intimidated by the nay sayers that will try to tell you this is illegal, they are only trying to interfere with your constitutional right to free speech.

I am proud of you Davey and look forward to reading about your exploits in the newspaper. I am jealous that you will get to meet really neat folks like Riley Hollinsworth , and others, that I could only hope to glimpse in my lifetime.

Why would you want to go to jail?

Transmit on the cops' frequencies, and they WILL arrest you, and the FCC
will lift any licenses you might have.

No, the 'emergency' clauses won't save you. This is something they flatly
do not tolerate.

(Probably a troll, but, in case he was serious)

Local comment (paraphrased) when someone (a ham) did this, and was arrested
and his gear confiscated, by FCC: If someone wants to claim an emergency,
they better be on a boat that's ON FIRE and SINKING. Nothing less will
save them.

OK, if you really want this done, here's how.

Get an old cell phone. Something not traceable to you. Call 911, say you are Emilio Goldstein, or some other made up name and advise you're following a drunk driver and give them that plate #.

Then listen up on your scanner and you will hear what you want to know. They usually run plates of drunks incase they head for home.

Gee - why didn't you think of that? Have fun.

Best bet would be to open up the yellow pages and find a scanner or ham radio dealer in your area - then go there, check out what's available and make your purchase. The people there will know what kind of scanner to buy for your area.

2928. Video-Motion-Detector who can make ?

Newsgroup: rec.radio.scanner
Date: 2003-04-16 18:23:43 UTC
From: bla <comsecnl@hotmail.com>
Message-ID: <Pchna.40870$qm4.6327681@amsnews03.chello.com>
Source record: 32745
Cross-posted to: rec.radio.scanner,uk.radio.amateur

Who can make or design a " Video-Motion-Detector" ?

A "Video-Motion-Detector" is an electronic device that can be connected to a videocamera, when a movement in the video-picture is
detected the unit will switch a relay
wich can be used to switch an alarm or a timelapse-videorecorder.

Such a unit is very hard to find !... specially when it should run on 12 Volts (just try it on the internet)

It should be a small box with 2 connectors (video in,video out)
and 1 adjuster for sensitivity

A later and more luxurious model should have the possibility to
adjust for a certain part of the screen (field) so it will only react to movements in this part of the field (this field could be an
adjustable square wich will be visible on the connected monitor)

The idea is to make a lowcost unit in a small box (not based on windows software on a pc)
maybe a pic-processor can be used or old-fashioned anolog parts

I am willing to pay good for a good design or working model

Any tips or ideas are also welcome

Please respond to: comsecnl@hotmail.com

Thanks in advance

Thus the argument that the stuff could be hidden in the three hours from a UN inspector revealing he plans to go to Plant X to the time the inspector arrives - would not be like that.

How come we never find any of the things?

Even with inspections after minimal notice?

We
> would then have to have a sensor for the breakdown
> products ... which may be the same as for a number
> of ordinary insecticides.

I am talking about current production. The stuff produced way way back in time - is not likely to have retained much punch, given that it was weaponized simply rather than with elaborate storage strategies in mind.

I think we would have proof of current production - recent production.

We have no proof.

Therefore I think it unlikely that there has been recent production.

Therefore I think the argument that Iraq posed a serious threat to us is not correct.

There are now a huge number of excuses for the failure of any one to
find even one WMD.

We have excuses like - Blix must be incompetent - that is why he can't
find WMD.

Or Iraq is real big - big as California - so that is why we can't find
any WMD.

Or Iraq decided it would be futile, so they didn't use them.

Or ...on and on and on.

After a while, a mountain of excuses should make you wonder whether
there just aren't any WMD to begin with.

That we were the victims of one of the biggest frauds in history.

2931. Anyone had any dealings with john_lalonde@sympatico.ca?

Newsgroup: rec.radio.scanner

Had a trade deal on some equipment with john_lalonde@sympatico.ca .
Four weeks ago I shipped a package to him at an address in Canada.

I've never received my package and now his e-mail bounces. Bottom
line: I've been had. Anyone else had any dealings with him? By the
way, he signed his e-mail with the name "Mike". Guess I should have
seen this one coming.

2933. what % of police departments encrypt?

Newsgroup: rec.radio.scanner
Date: 2003-04-16 19:36:50 UTC
From: Dan Jacobson <jidanni@dman.ddts.net>
Message-ID: <87brz6z12l.fsf@jidanni.org>
Source record: 32664

What percentage of police departments encrypt communications these days?

For a new equipment order, would the choice to encrypt not add much to
the price or degrade much from performance?

From a brief reading of old news here in Taiwan, it seems they were going
to go digital but then backtracked to analog due to performance
problems.

As they are big buyers of Motorola GM 950s, could they say go for the
"Transcrypt Scrambling Option Board facilitates completely private
communication through Hopping Code Frequency Inversion Technique",
or might that jack up costs or degrade reliability such that they
wouldn't lightheartedly go that route cutting off scanner listeners?

what you need is a webcame with software that actually does the motion
detection for you.
i use A LOGITEC PRO 4000 CAMERA WITH THE SOFTWARE and it comes with
software to detect motion,time delaymotion,start stop motion.
only 90 quid approx from argos.

Ever hear of mobile facilities?

DOH!

> : I think we would have proof of current production - recent production.
> :
> : We have no proof.

Don't count on it. There have been allot of samples sent to labs - no conclusions yet. And as I mentioned before, the primary objective was to get rid of the regime - FIRST - THEN the REAL inspections can begin. Soldiers are trained to be SOLDIERS, not weapons inspectors. Hell, we're just now going back to cities we bypassed on the way to Baghdad et. al.

> : Therefore I think it unlikely that there has been recent production.

Your logic is flimsy at best.

Are you REALLY that thick? The primary objective was never to just run around looking for WMDs - did the coalition send in weapons inspectors?

DOH!

> We have excuses like - Blix must be incompetent - that is why he can't
> find WMD.

Do a bit of research, and you'll see how Hussein has obstructed the inspection process.

> Or Iraq is real big - big as California - so that is why we can't find
> any WMD.

Ever been to the desert in California? Tell ya what - I'm going to bury a truck in the Mojave, and I want you to find it - let me know when you do.

> Or Iraq decided it would be futile, so they didn't use them.
>
> Or ...on and on and on.

Let me ask you something - if YOU were in your country's military, through no real choice of your own, and were in a combat situation - in your own country - would YOU follow orders to use chem/bio weapons? Hell, most of those monkeys wouldn't even use CONVENTIONAL weapons - they dropped them, took off their uniforms, and hauled ass. Use your head.

> After a while, a mountain of excuses should make you wonder whether
> there just aren't any WMD to begin with.

What excuses? I didn't see a "Weapons Inspection Battalion" anywhere, in anybody's forces. Saw lots of weapons, but no inspectors. Don't recall

hearing of any orders to search every nook and cranny and THEN to advance.
Use your head.

I agree they couldn't have hid ready-2-use weapons
or chemical containers of nerve gas on short notice
without leaving some residues.

The sensitivity and selectivity of the detection
techniques remains an issue however. The difference
between certain pesticides and human nerve agents is
very small. Indeed, pesticides might be used to mask
the verboten chemicals, overwhelming the sensors or
chemical tests. Even something as whiz-bang as an
antibody to VX may be *sensitive* enough, but not
selective enough.

>How come we never find any of the things?
>Even with inspections after minimal notice?

Might be they were never where we were inspecting.
Doesn't mean they're *nowhere* however. A lot more
digging around is in order.

>> We
>> would then have to have a sensor for the breakdown
>> products ... which may be the same as for a number
>> of ordinary insecticides.
>
>I am talking about current production. The stuff produced way way back
>in time - is not likely to have retained much punch, given that it was
>weaponized simply rather than with elaborate storage strategies in mind.

No reason VX would 'go bad', at least not seriously
so, even if stored inside a shell for a decade. It's
a fairly stable and non-reactive substance. There are
some other nerve agents that are less stable and will
break-down within hours if exposed to the environment
or likely a year or two inside a shell.

>I think we would have proof of current production - recent production.
>
>We have no proof.

Not yet ... but then, as I said, depending on the
nerve agent ... "recent" can be a decade or more.

>Therefore I think it unlikely that there has been recent production.
>
>Therefore I think the argument that Iraq posed a serious threat to us is
>not correct.

There are all sorts of "threats" ... directly bombing
the USA or one of our allies with nerve gas is only
one variety of "threat". Supplying 3rd-parties with
small quantities of chem/bio agents is another kind
of 'threat'. The 9/11 attacks only knocked down a few
buildings, but the political and especially economic
impact was enourmous. Ergo, even relatively small,
indirect attacks can be devastating in their way.
Direct loss of life is not the ONLY relevant measure
of "threat".

Saddam was getting himself into the Israel/Palestine
thing in increasingly larger ways during the past
few years ... recently giving many cash rewards to
the families of Palestinian 'marytrs'. It's clear
that the megalomaniacal Hussein saw this conflict
as a means to secure himself a glorious place in
arabic history ... but cash alone wasn't gonna do it.

He would have to get behind 'spectacular' attacks on
Israelis, do a LOT of damage to them and (eventually)
claim credit. Chem/bio weapons, even in fairly small
quantities, were the quickest way to slaughter a LOT
of Israelis (and maybe some Americans too). I think
he had revealed his path, and it was a journey we HAD
to cut short before it reached its logical end.

So yes, there WAS "threat". Plenty of threat. Motive,
means and soon the opportunity.

Same here in Denmark. They also tell the address of owner, his
driver license status, his criminal record etc etc.

Hi All
I recently started to listen to ATC at London Heathrow and I am hearing the term localize and localizer for aircraft approaching for landing.. Could someone help me in explaining this term and if possible point me to some glossary that lists all these terms! Thanks for any help!

While this doesn't pertain to scanners, I noticed on your website that you are interested in Gaming. You indicate that you are looking for a Commodore 64. I have a number of these units, as well as the drives, a couple printers, and tons of software/games for them. You still looking for one? I'd be willing to strike a deal with you, but I must warn you that they aren't the lightest machines, and might cost a bit to ship...

Let me know through the group here if you interested, and if you are, I will email you directly...

Hi Ex,

Here is one place to start:

http://www.visi.com/~gwolfe/radio/scanfreq.shtml

This lists some trunked systems. The Andover area does not have a lot of
trunked systems yet. I am just south of Andover, and I can hear most of the
Anoka County frequencies on a non-trunked capability radio.

You might also ask here: http://www.scanfan.com/. Lots of good Metro Area
info to be found here.

Very 73, Jackie

Hi Kevin,

As a private pilot I have some knowledge of the Instrument Landing System (ILS).

First there is the Glideslope and Localizer. The Localizer operates in the 108 to 118 MHz range and operates in conjunction with a paired Glideslope frequency in the 300 MHz range. That is to say , if you want to use the course at Teterboro (TEB) Airport in NJ you dial 108.9 MHz and another receiver in the plane automatically dials up the correct 300 MHz frequency.The Localizer advises left/right of course and the Glideslope advises above/below course by using highly directive antennas and two transmitters modulated at 90 Hz and 150 Hz. This information is displayed with horizontal and vertical needles in the planes "Flight Coordinator". There is a "Compass Locater" 5 miles from the runway in the 200 kHz to 400 kHz range and sends the first two letters of the ILS course (T-E) in this case.This is collocated with the "Outer Marker" which is a low power beacon on 75 MHz and lights a blue light on the planes panel. The "Middle Marker" is about 2000 feet from the runway and has a 75 MHz beacon and lights a yellow light in the plane. There may be a MF beacon here and it would ID with the last two letters of the ILS course (E-B) here. The "Inner Marker" is at the threshold and the 75 MHz beacon lights a white light in the plane. The Outer marker has a dash-dash (400 Hz) sound, the Middle marker has a dot-dash sound with a higher pitch and the Inner marker has a dot-dot sound with an even higher pitch.

Well...that's a start. I am sure that there is a web site-that explains it better!

Mark

Just checked the site.
Was the letter asking for the removal of just the frequencies?
If so replace the channel and callsign details and just leave out the actual frequency.

Not only will it stick it up them but it will still allow some of your members to determine what is what as they listen and use what info you can provide.

Just a thought
Either way commiserations and good luck.

Adds cost and degrades performance.

>As they are big buyers of Motorola GM 950s, could they say go for the
>"Transcrypt Scrambling Option Board facilitates completely private
>communication through Hopping Code Frequency Inversion Technique",
>or might that jack up costs or degrade reliability such that they
>wouldn't lightheartedly go that route cutting off scanner listeners?

It would add some privacy, not security.

No one uses analog scrambling unless they have to. It decreases
intelligibility, decreases range, adds cost and complexity and makes
the radios special purpose items usually locking you into a particular
vendor.

Digital encryption (note difference in terms) cannot pass through a
standard repeater, adds a lot of cost and complexity, adds necessity
for key control, frequently reduces range and almost always reduces
intelligibility.

Either decreases interoperability. Every person with whom you
communicate must have the identical scrambling/encryption, same keys,
etc.

Following closely I see...

Today is the first chance I have had to read and respond to the replies I received to the original posting. Some of us have jobs and lives to lead; we can't spend every second glued to our computer screens reading the newsgroup(s)... Because of such, I'm sure there are a number of regulars here that have yet to even read it, therefore your comments are uncalled for. If you don't want to help out or if this thread bothers you that much, you can just skip by it in the future and keep your useless, uncalled-for comments to yourself...

Nothing that advanced in this area... Everything is by the radio, except for a few things they discuss using ancient speech inversion scrambling or those old analog bag cell phones. Still looking for a decently priced scanner that can pick up the cells.

The book by Christian theologian, doctor, and musician Albert Schweitzer called the "Quest for Historical Jesus" would be a good investigation into your faith.

Hi BBall;

You hit the nail on the head so to speak. Even if TenTec where to go
out of business we could continue to use their radios for years. That
can not be said for hardware that is not doumented publicly.

As wonderful as WinRadios are they are completely useless to those of us
that use alternative hardware or operating systems. So as good as
WinRadios are they don't have a chance in hell of selling to this guy.

Thanks
dave

Your point is well taken, but I would not buy radio equipment from an anonymous newsgroup poster, and neither would many other hobbyists here with any sense.

nothing like having useless computer gear, right? IMHO, Linux, and
open hardware keeps a lot of gear out of the landfill...

> As wonderful as WinRadios are they are completely useless to those of us
> that use alternative hardware or operating systems. So as good as
> WinRadios are they don't have a chance in hell of selling to this guy.

you got that right... i'm also now looking at handheld, multi-band
transceivers with open-source support... so far, this list falls down to:

Icom IC-Q7A - supported by all operating systems, due to Bob Parnass'
great efforts and tk client...

Yaesu VX-5R - supported by a pair of command-line clients for UNIX, any
UNIX-like OS, such as FreeBSD, OpenBSD, or NetBSD - and Linux!

i'm in the market for a nice 2M handheld... but no way will i buy any
piece of gear not supported by Linux... cross-platform gear is the
only way to go!

The 7 county metro area Twin Cities is in the process of going digital and the kind of digital that currently cannot be scanned. Most of Hennepin county has already converted with the Minneapolis Police and the State Patrol not far behing. The St. Paul part of the Metro will be a little bit slower to convert.

the best local scanner site is

http://www.scanfan.com

If you had a BC760 XLT without the Cell band in it, then anything above 900 MHz is analogue for both Cell phones and cordless phones.

I search 900-920

> What would you consider a serious threat...a mushroom cloud over Israel?

That would be bad. So would giant Spiders from Mars unleashed by Saddam
eating up all Jewish chilren in the world.

The evidence for the Spiders is as good as the evidence that Saddam has
the ability to produce a mushroom cloud.

Let's stick to things not in the realm of idiocy - ok?

Like - bio-chem weapons that Iraq is ALLEGED to have. Of the sort that
they once produced.

There is no evidence they still have any which still can kill anyone.
The weapons we know they made - wear out with time.

Like anthrax weaponized in liquid.

But again - what if they do have them? Does attacking Iraq make us
safer?

Terrorists are MORE likely to attack us after Iraq - not less likely.

We have proven bin Laden correct. We have taken his bait, in effect.

So good muslims will now think - gosh, bin Laden was right. The US
really is a modern Crusader. We must fight them.

And they will use the weapons which can work on us - such as bio-chem
weapons.

And they can make their own - even though we have now invaded Iraq.

Now that is a world of reasonable comment.

Giant spiders from Mars, or Iraqi nukes over Jerusalem, are not.

I was wondering if anyone knew if either Ocean or Burlington Counties, NJ use PL tones on the 4 SPEN frequencies and their EMS and Fire dispatch frequencies. If so, could you provide me with a listing of the PL tones used for each frequency?

> DOH!

Gosh, you apparently have never heard of spy satellites able to watch
mobile facilities.

Mobile facilities, lacking extreme measures to avoid seepage, would spit
out tell-tale molecules, detectable by US snooping devices.

We have never seen any such thing - or you and I would know about it.

The US has many resources to spy - we listen in on phones, we listen in
even where there are no phones. We can see inside buildings, we have
people who tell us things because they do not like Saddam, or because
they like our money, or because we blackmail them in various ways.

It is possible that there are mobile labs which somehow avoid releasing
tell-tale signs of their efforts.

It is also possible that Saddam has giant spiders from Mars waiting to
kill us all.

But I think we should see some evidence before we say - oh, that must be
the case.

You always have some lame excuse - maybe his dog ate the WMD, maybe
this, maybe that.

Excuses, excuses, excuses.

Give it up pal.

> Direct loss of life is not the ONLY relevant measure
> of "threat".

And attacking Iraq makes them more likely - not less likely.

If terrorists wanted a scary attack with bio-chem stuff, they can do it
- without Iraqi help.

There are many scary bio-chem weapons terrorists can make up themselves.

There is a ten-lane road to that result. Shutting down the one lane -
via Iraq - leaves nine other lanes available for the traffic.

It is not going to stop the attack of that sort.

And since attacking Iraq proves that bin Laden was correct - that the US
really is a modern day Crusader - many more good muslims are going to
conclude that it is their moral duty to fight us. And, of course, they
will fight with weapons which work against us - such as bio-chem stuff.

So attacking the threat you mention - makes it more likely to happen.

>

Alternatively, you could say that he, like about all arab muslims, saw that Israel is doing bad things, and that the Palestinians are getting screwed and deserve his aid.

You don't have to demonize Saddam any more - the invasion has taken place.

We can get back to normal discourse - where such Saddam-is-Satan in every possible way propaganda is no longer needed.

Giving aid to the families of those who die in the Palestinian conflict - and Iraq gives to all of those who have someone die, terrorist or not - is a normal sort of thing for someone with their view to do. You don't have to be Satan, or motivated in strange ways, to think it's the right thing to do. I am sure that Saddam is not the only one offering aid.

>
> So yes, there WAS "threat". Plenty of threat. Motive,
> means and soon the opportunity.

You mean "motive" rather than threat. Iraq doesn't actually have WMD - haven't you read the papers lately?

At least there sure is no evidence they have the stuff - despite a mountain of effort to find some evidence.

But assume that Iraq could give aid to Palestinians in the bio-chem realm.

How come we have to fight Israel's war for them?

Do they have oil?

No. So why exactly are we on their side instead of on the side of the oil producers?

Why not switch sides? It's not as if the Israelis are saintly in this conflict and the Palestinians are evil. Far more Palestinians get killed than Israelis. Why not support the oppressed - instead of the oppressor?

So our national interests lie with the Arabs - they have the oil. And the moral interests - are muddled, at best. So why fight Israel's war for them?

Can't they protect themselves?

And of course, if Palestinians wanted to gas Jews, they would do it. With or without Iraq.

So that argument - we are protecting Israelis - is bogus.

Ten lanes open to bio-chem attacks - closing the Iraq lane won't shut down the others. Indeed, it will motivate more to take the drive.

You argue well. Thanks.

>
> DOH!

You mean - Palau - the Island in the middle of the Pacific with no
military listed as part of the coalition? No, the coalition did not send
in weapons inspectors. They don't have soldiers or weapons inspectors in
Palau.

But the US military sure did send in weapons inspectors. We have sent in
special highly-trained teams with super high tech devices to scour the
country to find the WMD. Loaded up with our very best intelligence as to
how to find the things.

It is a high priority of the war. Those teams have gone to MANY sites we
thought might have WMD - not a single hit yet.

You must get your "news" just from Fox News. If you read the papers, you
wouldn't have made that mistake.
>
> > We have excuses like - Blix must be incompetent - that is why he can't
> > find WMD.
>
> Do a bit of research, and you'll see how Hussein has obstructed the
> inspection process.

Again - too bad you don't read the papers. Iraq has let the UN
inspectors go anyplace in the country, go behind any door they want.

There is no place unavailable to the UN inspectors.

The UN inspectors have been guided by the US - and not a single
suggestion of the US turned out to be worth anything. No WMD at all -
every single idea of the US - with its fabulous spying resources -
turned out to be garbage.

Again -you just have excuse after excuse after excuse. No weapons
inspectors - another lame and fales excuse. Hussein obstructed - another
lame and false excuse.

Nothing but excuses.

For sale...

Uniden BC 250D Apco P-25 Digital Police Scanner with Apco P-25 Card
Monitors Apco P-25 conventional, trunked 3600 & mixed mode,
Digital communications.
The unit is only 1 1/2 months old and is in mint condition.
Unit works great. I need to sell it because the agencies in my area went to
a different system.
Comes with all the original paperwork, box, battery pack & charger.
I will not split up the card and scanner.
I paid $650.00 and must take the loss and sell it as used.
So if are looking for one of these, here is a chance to get it at a great
price.
you can check my feedback on Ebay user rating tramd300@aol.com
use this link for a picture of unit
http://members.aol.com/TRAMD300/BC250Scanner.jpg
And use this link for the specifications of the unit
http://www.snowcrest.net/marnells/factsheet.htm
You get this all for $550.00 shipped in the USA only.
I will accept postal money orders only or if you wish to use Pay-Pal.
Price is firm...
Please email me direct for more info.
I check my mail every day.
Thank you...

> what are they?

131.8 is statewide for SPEN. Ocean County low band Fire 1 Dispatch
(33.780) is 146.2, OC EMS mostly use the 500 trunk system now... prior
to that EMS 1 Dispatch/Operations (155.205) was 186.2

2986. Scanner Antenna Recommendations

Newsgroup: rec.radio.scanner
Date: 2003-04-17 08:18:07 UTC
From: andyshank@hotmail.com
Message-ID: <ba43b87e.0304170018.2ea189e2@posting.google.com>
Source record: 32551

Ok guys, thanks for the help with my previous message. I ended up buying the Uniden Bearcat 780xlt. As most of you stated, it was well above my hopeful spending plateau of $150, but as far as I've found, it's pretty much the best. On to my next challenge: an antenna for my car.

I'm looking for recommended manufacturers or models of antennas that will make my scanner shine. My department uses an 800 Mhz trunking system, while some in the area use systems in the 400s, while others are still in the 150s. I need an antenna versatile enough to encompass all these ranges. The other requirement: it can't be magnet mounted. The mag mounts don't tend to stay on very well at 130 MPH! The trunk lip mount is preferable to me unless someone has a better idea. Once again, I'm not looking to spend a ton of money on my antenna, just something that will give me acceptable performance. Any help would be greatly appreciated!

Thanks!

Andy

WHY "CNN" WHEN WRONG ?

"We are the ones that determine what the people's attitudes are.
- It's in our hands"
- - Ted Turner,
- - - CNN Founder and President, speaking to a broadcasters group.

"Christianity is a Religion for Losers."
- Ted Turner,
- - CNN Founder and President, to the Dallas Morning News, 1989.

hmmm - use a PIR to check for motion (unless you are using a super zoom
on the camera). Have the PIR detect the movement, switch on the infrared
lights, and switch the VCR record on...choose your delay and Robert is
your proverbial....

2990. F/S BC-780xlt and Software package

Cordless, most any scanner today will recevie the 900MHz cordless band, not
the cell phone band but the cordless band. A list of that band can be found
at the bottom of this page: http://webpages.charter.net/moment/frequ.htm
And mmy bc780XLT and my Pro-2006 do it just fine.

Hey Andy I no I'm about to get a lot of flack on this but, most mobel antennas are the same thing with a different name :-) you can get a window mount antenna from Radio Shack that works just fine at a 130 MPH. And you can always take a mag mount and pop-rivet the outer edge to your trunk :-) We use the windows mount on our cars, works just fine.. But dude 130mph?? use the radio thats what it's for :-)

If you use a webcam and a cheap PC - say an old notebook if you need 12V,
there is a software package for Linux called Motion which does exactly this.
It will even Email you the video.

Source record: 32560

Have a Exdellent condition, 100% working Pit Boss Arcade type Video game for trade on a "GOOD" scanner. The Pit Boss has about a dozen games in it that can be played like - Race Horse, Sex Trivia, Poker, Blackjack etc: As mentioned it is a Bartop or Tabletop game and has a swivel base. I've had it in our rec room for the past few years. It has a bright clear picture on a 10" picture tube. I will provide pictures if interested. I will not ship, it will have to be picked up. I'm located in southern Indiana, near Bloomington. Please email me direct at eg9k@aol.com - Ph.# 812-825- 2851 Thanks for reading - Harold 73's

Schweitzer certainly wrote a lot. He was not thought to be in the main stream by many other theologians. He was entitled to his opinion. I think in his book The Mystery of the Kingdom of God he was easier to follow. That said, I think his view that Jesus belief centered on the forthcoming end of the world is wrong. In fact what I read in Jesus is that it makes no difference if or when the world ends. We lead our lives and increase or knowledge and beliefs as if the end was today or if it is a thousand years from now. I am happy because He lived, He lives and in a few days we celebrate Easter. What a wonderful time. MY JESUS LIVES......

Very few agencies use encryption today. But you will see the number greatly increase in the future. Up until now there have been very few digital systems. And digital is the key to real encryption. Not only will the number of digital increase, I think they will be mandated in the generation of radios that operate in 700 MHz. The early DES/DVP did have a problem with degraded signals. but that is no longer the case. As far as interoperability, those types of communication may well remain analog. Also a digital radio can operate both in encrypted or non=encrypted modes. In fact in 700 MHz the rules permit wideband interoperability channels. With the new systems being digital, the cost of encryption is greatly reduced. Also with the new digital scanners you will see either encryption or proprietary systems like ProVoice in greater use. That's the way I see it. Gill

Radios that do this are more often called COMMUNICATIONS RECEIVERS than
"scanners". For instance I have the Yaseu VR-500 hand held receiver
that has 1000 channels and receives AM, FM, CW, and SSB. It receives AM
boradcast and well as shortwave, FM broadcast, VHF and UHF TV audio
(basically everything except cell phones) and fits in the palm of my hand.

Richard in Boston, MA, USa

lost@aol.com wrote:
: Could someone explain why scanners do not pick up FM and AM commerical

There are no weapons of mass destruction in Iraq and none have been moved to Syria. And the US has known this all along. If any are found at this point then they are in the same category as the dropped gun at a crime scene -- planted evidence. I am reminded of a cartoon many months ago. Two military guys in a planning office. "Do they really have weapons of mass destruction?" says on. Says the other: "Of course not! Do you think we would attack if they did?"

Bear in mind that the US and UK have had little or no diplomatic, commercial, cultural or any other sort of contact with Iraq for ten years or more. The only sources thay have had for information about the country have been covert or remote, neither of which is any substitute for assets on the ground. Defectors are notorioulsy unreliable and so are traitors. Many other nations, on the otbher hand, have had continuing diplomatic, commercial, cultural and even hisorical ties to Iraq during all iof this time. They were in a hell of a lot better position to see and know what was really going on in that country just through day to day contact. Ecery one went out of its way to stat e not once but many times that they could not cooroborate the assertions of the US and UK governments. And then we find out that the US and UK are working with forged documents and plagiarized ten-year-old university theses.

The US will be embarrassed when it can turn up nothing. But anyone watching Rumsfeld and Bush knows that will hardly bother them. The war had nothing to do with WMD, from the very start. Or with 9/11. I remain puzzled. What was it all about? What justified destroying a stable and cohesive society and economy? Anyone watching TV and seeing those highways, buildings, broad boulevards, traffic lights, street lights, opulent residential neighborhoods could see this was no backwater of civilization and did not deserve wanton destruction.

But the jingoistic yahoos who populate cable network news and a lot of the discussion here and elsewhere don't want to think about any of that. It is enough that US might has squashed a flea at the cost of many thousands of lives -- lives, apparently, that the US considers less than human since it can't even be bothered estimating how nmany berevaed families there are in Iraq.

3005. Original Unblocked Scanner Price..?

Newsgroup: rec.radio.scanner
Date: 2003-04-17 17:01:27 UTC
From: Skipp likes good cabs <spammenotyouheathen@yahoo.com>
Message-ID: <b7mml7$4hi$3@woodrow.ucdavis.edu>
Source record: 32569

OK, quick question for the masses.

Would an original Radio Shack branded Scanner/Receiver made by or similar to a Uniden unit (similar if not exact model still made and sold) before the cell band be worth the $269 original price..?

This is the desktop unit which has the included PL tone decoder option, bought new. The PL board option was installed and tested, then the unit placed in the original box and set in a closet. I believe the pl board option was another $49 or something like that...?

Anyway, the owner of the estate is asking me for a value before he tries to sell them.

I just want to know if a New In Box Condition pre ban scanner/receiver would be worth anything more or less than a current model unit without the 800Mhz cell band..?

Would Ebay be a good place to list and sell said beasts... there are three of these units comming up.

Post your follow up here when you can, I'll read it.

thanks

cheers

Well you got a point there. I didn't think of that.

I guess you're damned if you do and damned if you don't then. That's why I don't sell things on usenet. Just plop them on ebay and let people find them there.

That's what I would do.

I am buying my first scanner. I live in Muskogee, Oklahoma; near Tulsa and a friend advised I post here to get an idea of what equipment I need for my area. I am lookin on eBay at scanners.

I am interested in Police, Fire, Ambulance, HAM Radio, Aircraft/Airports, Trains,etc.

Help appreciated.

Consider tk8500 open source software.
It works on Linux, MacOS X, BSD, Unix, Windows (95 and later),
etc.

You can download it from http://parnass.com
and read more about it in April 2002 Monitoring Times
and November 2002 Shortwave Magazine (a British magazine).

I don't warrant tk8500, but it won't cost you anything.

Since most cellphones are now digital, it has no special value, if indeed it ever did.

That being said, some fool on e-bay will pay twice what it is worth if you say it covers the cell phone band. You need to word this carefully to insure the auction is not terminated.

A realistic price can be determined by doing a google search for that particular model. You may also search past auctions on e-bay to see what it brought.

A mag mount will adequately hold a scanner antenna at 130 MPH. I had a 5/8 2 meter whip on a Porsche and on several occasions tested it (the Porsche) to speeds in excess of 140MPH :>)) and never lost a mag mount.

I've been doing some comparison "window" shopping on the 7600GR, helping to make my wife's birthday gift to me easier ;)

Called Universal Radio, they qouted me a fair price, that's probably average for anywhere. I asked about shipping to Oregon- 9.95.

What is also an important consideration: what if the radio is DOA? I don't want to hassle with a fly-by-night online retailer where I might get stiffed.

I have a Radio Shack Pro-2005 base scanner for sale. This radio is in

Excellent condition, non-smoking environment, bright display, with the

cellular and scan speed-up mods. Includes box and manual.

$250.00 Shipped via USPS Priority Mail, insured.

PAYPAL accepted and preferred, but will take a US Postal money order.

Personal check OK but the scanner ships when the check clears.

eBay feedbak under OFFDAN.

E-mail if interested.

Mr. Roman also left me a phone message, where he stated that , according to
HIM, and I guess he is speaking for Time Warner. The MERE FACT that the
posting was aon a newsgroup deems it to be commercial.

Go figure.

Dan

I have integrity and try to follow the law (so do most hams). You obviously just want to slam hams (rhyme not intended) for whatever reason, because of your:

1) accusing "self-righteous so-called hams" for being the culprit of Dan's problems. He did not crosspost his message to any ham NG's or explicitly accuse hams within the text of his message.

2) resorting to calling me a child for sticking up for the vast majority of humble, honest, and kind hams (I am in this majority) and making innacurate statements, such as "they act that way [self-righteous] on the ham band also." 'They' is an all-inclusive word; you include every single ham, good or bad, in such a statement.

I have no idea what goes on CB, so I can't say for sure how good or bad the people on that band are. Some may say it's the "criminal band", even if they have never heard it. I won't join that crowd.

Perhaps you should get a clue about the radio hobby you are talking about. Until then, please do not spread your delusions over the world-wide web.

John

>I received this e-mail from my ISP today:

Was that the total of what they sent you?

I'm unsure how much of the "attitude" is your translation of his words as opposed to his attitude. If you are not adjusting it in the process of relaying it, it stinks of total incompetence. (The wording used in his reply below tends to suggest this is a person who is not logical and is not able to read or write with anything near enough precision to be interpreting a user agreement!)

I am completely dumbfounded at the idea that something is "commercial" simply because it is posted to Usenet. That just does not make sense, so I'm not sure what the intent is.

Clearly your post was appropriate in at least rec.radio.swap, and while I don't read the other two groups (and don't know if there is a stated policy in rec.radio.scanner for example against posting items for sale), it seems a bit of a stretch would be required to see any violation of Usenet norms, never mind to the extent that it would violate a user agreement with an ISP.

My advice would be to challenge Mr. Roman to demonstrate where and how such a posting violates your contract with the ISP. And I would remind him that *he* is legally bound by that contract too, and that if he violates it you have the option of legal action against him personally as well as the company. You might quote the respective portions of the user agreement which relate to email and Usenet; however, I would *not* make any statement about what it means or whether your posts do or do not fit the contract language. Instead, *demand* that he demonstrate where there is a specific problem. You should be very general, and insist that he be very specific (with the clearly implied threat that if he is wrong you will eat him for breakfast).

Again, as long as he takes no action which causes you damage, he can say anything he likes about what it all means. He can warn you about future actions, etc. etc., as long as he does not actually take any such actions. I would interpret something like "we are keeping this on file" as an action, and so would "one more instance and your contract will be terminated". But a broader statement like "if this continues we may..." is OK.

One other suggestion too, is to not deal with this fellow for
more than about one exchange. If his next response is anything
like these appear to be, insist on contacting his supervisor
to complain about *him* as well as this whole business of your
Usenet posts.

Are you sure this is authentic? Anybody can write and send a letter.
I'd landline RR and ask to speak with Mr. Roman.

Show me the weapons, Q! Show me the f-in weapons!

But no, you can't, because there isn't a single WMD in Iraq that has been
reported so far.

I said FOAD because he was making fun of people who have the total absence
of WMD on their side. We were right for opposing the war because it was
based on false evidence of WMD that DON'T EXIST. PERIOD.

John

Search for Pryme (Free) or Tincam, even better software for your
Logitech.

130MPH?? Why?! Are you a wheelman or something?

I have a larsen 144/440 Mhz trunk mount amateur radio antenna. I spend about $60 on it in total. It's definitely worth the money however because I get excellent reception from aircraft on 118 Mhz all the way up to trunked apco systems in 866 Mhz.

Yea, OK... I think your just a tad bit lost... You better look at your own posts, as the only subjects you have ever posted anything under have all been completely off-topic. I think you goofed here though, as this subject is more on-topic than any of the others you've ever posted under...

Obscene language? Where? Reporting to ISP's? <sarcasm>You bet, every day...</sarcasm> Running tags? I here those on the scanner every day, multiple times of day, can't more on-topic than that...

PH

P.S. Got a problem, kill-file me... I'll do the same for you if you like, as I've never seen anything useful from you anyway, so I won't miss you..

3032. Re: MY ISP HAS ANSWERED

Newsgroup: rec.radio.scanner
Date: 2003-04-17 21:44:22 UTC
From: Dan Conti <dconti@nj.rr.com>
Message-ID: <WeFna.11574$mC1.3405000@twister.nyc.rr.com>
Source record: 32497
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

I am not going to get into semantics over whether I am fabricating anything.

I will tell you that what I post is an exact copy of what I got. If you doubt me, or my intentions here, I can't help you. My only motivation is to make folks aware of just how bad the newsgroups have gotten, and warn that what happened to me could happen to anyone ...

>131.8 is statewide for SPEN. Ocean County low band Fire 1 Dispatch
>(33.780) is 146.2, OC EMS mostly use the 500 trunk system now... prior
>to that EMS 1 Dispatch/Operations (155.205) was 186.2

Thanks for the info. EMS in Ocean County is still dispatched and they communicate on 155.205. Only a few of the smaller police departments (Beachwood, Pine Beach, South Toms River) have gone to the 500 mhz trunked system.

3035. MY ANSWER TO MY ISP!

Newsgroup: rec.radio.scanner
Date: 2003-04-17 21:56:37 UTC
From: Dan Conti <dconti@nj.rr.com>
Message-ID: <pqFna.11575$mC1.3408417@twister.nyc.rr.com>
Source record: 32500
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

I will preface this by saying to all that I apologize for bothering everyone with this continuing saga, but I truly believe that it is of importance to all who use the radio groups, and have to deal with ISPs.

As a result of the position taken by my ISP, I will no longer post any FOR SALE, or FOR AUCTION threads on the newsgroups. According the logic of Time Warner Cable, if I post on eBay or Strong Signals, I am commercial and in violation there as well.

BUT, until I hear different, that is where I will post future equipment.

Since I also admittedly have a big mouth, and often take the irritating side of an issue, I will simply lurk here and not make future postings of any type for fear of being turned in to my ISP. Love me or hate me, I always thought we had fun, and a good debate. To the little children who turned me in, I surrender, you win. I am silenced.

The following is my response to the latest e-mail from the fellow at Time Warner. It is exactly how it was sent. The only other posting you will see from me in the future is IF and WHEN I get a final reply from them, I will pass it along. DAN

>Dear Mr.Conti
>It is not my job to judge you or your actions.

Yet you or someone in your unit sends me a threatening letter. Please put me in touch with someone who CAN make a final judgement in this matter.

>Our intent was to let you know that there has been a complaint made against your >actions on this newsgroup. It is our policy to not reveal the party who filed the >complaint.

It is unfortunate that you take the word of someone who is most likely NOT a Time Warner customer, over that of a good customer for many years. Is that good customer Relations?

Because a complaint was made, it doesn't mean it is valid. I should have the right to dispute the complaint reasonably with someone of authority at your company.
Additionally, I have the right to question your interpretation of your user greement as it relates to this matter, and if necessary, my attorney will certainly have the right to review it as well. All I get is short answers apparently in 100% agreement with the complainant.

>We just ask you to be more careful in the future of what you post on newsgroups >because this could affect the status of your Roadrunner account

if we receive any >more complaints. Thank you.

In effect you are curtailing my usage of your service without allowing me the opportunity to contest your position. I need to know specifically how to be careful, and why I must be carefulm and where.....

My initial instinct, and those others, would be to take your equipment and throw it on the front lawn where you could pick it up, and terminate your service.

Quite frankly, your service has been good, so I do not want to do that. If there were another service available as good or better, I would.

According to your position, if I post a For Sale or For Auction item to a newsgroup which is a private sale, and not a regular occurrence, and not for profit, it is considered commerical by Time Warner, and jeapordizes my account.

If I post something for auction on eBay then, am I in violation?

If I post something for sale, or for auction on a web site, am I in violation?

You mean to tell me that your Time Wanrer customers posting on eBay are in jeapordy of being cancelled?

This entire matter is ridiculous, and you know it. You are obviously intelligent, and internet saavy. You KNOW I did nothing wrong. I did not violate newsgroups rules or charters, nor am I a commercial user of your service.

I think you guys should back down on this stuff, tell the whiners that there is NO violation, and let your customers enjoy the service they pay PREMIUM prices for every month. You are opening up a can of worms here that should stay closed.

All you need is a big mouth like me, and my big moth attorney to push this issue, get publicity, and TIme Warner will look ridiculous as a result.

I am sure you are aware that I already have a good portion of the radio hobby newsgroup members up in arms.....

I do not consider this matter resolved. I want the complaint removed from my record, and someone of authority at Time Warner to review the matter impartially and make a final determination one way or the other, relative to the cogent hypothetical points I made above.

Sincerely,

Daniel M. Conti

Sincerely,
Gilbert Roman
Time Warner Cable
Internet Security

I'd find another internet provider if they think they can cancel you out for posting on eBay. What a bunch of retards.

Me thinks you need to get over it and get a life!

All your postings have NOTHING to do with this newsgroup and just subject
you to more complaints!

If you don't like what happened then don't come here! There will always be
idiots in the world and you
are just doing exactly what they want you to do, Make a big thing out of
NOTHING!

I'm a ham, too, John. And when its cold, I use plenty of
"blankets". I don't resent anyone making "blanket" comments on that,
either.

Ed

You might consider something like this, and just stay out of AOL's
services as much as possible.

Here are the official charters for the three newsgroups. These
documents are the law in a newsgroup. They are the reason a newsgroup
is formed.

They can always be found at: ftp://ftp.isc.org.pub/usenet/control/

They do not specifically state that you cannot offer items for sale.
So I don't see how anyone can complain. If there was a statement to
the effect that these groups were not for the sale of radio related
items then he might have a point. If you wanted to get real
technical with Gilbert you could offer these up to him but he's
probably too ignorant to understand.

REC RADIO SWAP

Originator: jmaynard@thesis1.hsch.utexas.edu

This group was approved as part of the rec.ham-radio.* reorganization,
whose vote results were posted over a week ago in
news.announce.newsgroups.
No objections have been raised as to the results.

Please alias the group rec.ham-radio.swap to rec.radio.swap. B news
sites may do this by adding the following line to
/usr/lib/news/aliases:
rec.ham-radio.swap rec.radio.swap
C news sites may alias the group by changing the 'n' at the end of the
entry for rec.ham-radio.swap in /usr/lib/news/active to
'=rec.radio.swap'. Be sure to lock the news system with locknews

before editing the active file.

Thanks for your cooperation.

rec.radio.swap is an unmoderated group which passed its vote for
creation by 177:44 as announced in news.announce.newgroups on 3 Feb
91.

For your newsgroups file:
rec.radio.swap Offers to trade and swap radio equipment.

This newsgroup replaces rec.ham-radio.swap. You will probably want to
continue to alias or refile rec.ham-radio.swap to rec.radio.swap.

rec.radio.scanner is an unmoderated newsgroup which passed its vote
for
creation by 298:24 as reported in news.announce.newgroups on 25 Aug
1993

For your newsgroups file:
rec.radio.scanner "Utility" broadcasting traffic above 30 MHz.
The charter, culled from the call for votes:

rec.radio.scanner is a newsgroup for discussion about "utility"
traffic above 30 MHz. FM & TV-broadcasting, shortwave, amateur radio
and broadcast satellite-related material doesn't belong to
rec.radio.scanner because they have their own newsgroups. This
newsgroup replaces alt.radio.scanner. In addition, the
rec.radio.scanner will be gatewayed to a mailing list which will be
created as soon as possible after newsgroup creation, as there are
many who do not have access to USENET news.

Why are we duplicating a viable rec. newsgroup? At last count, at
least 64%
of all articles in alt.radio.scanner are crossposted to
rec.radio.scanner!
rec.radio.scanner also has 4 times more traffic that a.r.s does.

Isn't this a waste of bandwidth??

I hearby rmgroup alt.radio.scanner. :-)

You'd wish death on someone, simply because they
disagree with you???

Outrageous.

Kumbaya, my Lord....Kumbayaaaaaaaa.....

The more you say something that only pro-war people say makes you look like
an idiot.

John

3052. Re: MY ANSWER TO MY ISP!

Newsgroup: rec.radio.scanner
Date: 2003-04-18 00:44:28 UTC
From: Royce Dean <Royce345@ibm.net>
Message-ID: <MTHna.230252$OV.286698@rwcrnsc54>
Source record: 32517
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

I would get another ISP. After all, you pay for the service. How do they have the right to tell you, you can't post equipment for sale?

"Dan Conti" <dconti@nj.rr.com> wrote in message news:pqFna.11575$mC1.3408417@twister.nyc.rr.com...
> I will preface this by saying to all that I apologize for bothering everyone
> with this continuing saga, but I truly believe that it is of importance to
> all who use the radio groups, and have to deal with ISPs.
>
> As a result of the position taken by my ISP, I will no longer post any FOR
> SALE, or FOR AUCTION threads on the newsgroups. According the logic of Time
> Warner Cable, if I post on eBay or Strong Signals, I am commercial and in
> violation there as well.
>
> BUT, until I hear different, that is where I will post future equipment.
>
> Since I also admittedly have a big mouth, and often take the irritating side
> of an issue, I will simply lurk here and not make future postings of any
> type for fear of being turned in to my ISP. Love me or hate me, I always
> thought we had fun, and a good debate. To the little children who turned me
> in, I surrender, you win. I am silenced.
>
> The following is my response to the latest e-mail from the fellow at Time
> Warner. It is exactly how it was sent. The only other posting you will see
> from me in the future is IF and WHEN I get a final reply from them, I will
> pass it along. DAN
>
> >Dear Mr.Conti
> >It is not my job to judge you or your actions.

You might have missed his point. Are you sure Road Runner sent it, not some jerk?

So, you roll over and they win. You've been treed by a two bit
clerk that answer's letters (poorly) and wants to bully you.

Your response the Mr. Roman is *way* too wordy and *way* too
scattered. A simple "Fuck you, because me and my lawyer are
going to continue appropriately using Usenet, and if you don't
like it we'll see you in court." would have been better.

Somewhere in between being that terse and being as wordy as you
were, there is a point that is perfect. Unlike on Usenet, spelling
does count in email. So does style, and just about everything
else. Do ten re-writes, and take a nap or go for a long hike in
between a couple of them. Don't send it until it is the most
effective document you can produce.

Other than this business of doing as he wants regarding Usenet posting,
what you asked for (a final action by somebody with half a brain) is
good!

A number of people do. If you don't, I suggest you either
ignore it, not read any of the newsgroups it is posted to,
killfile the thread or all participants, or commit suicide.

Take your pick.

Power House CB & Scanner: I'm trying to understand why someone would visit
your site at: http://powerhousecb.tripod.com/, but I can't get past all he
typos.

I don't have a problem with off topic posts, You do. Many of us don't
either. Give us a break it was a war. And gee whiz, the powers that be set
the newsgroups OUR Way not yours. Go find a moderated newsgroup.

Illegally running plates is not a scanner topic. I think what you did is
a... uhh.. letmme look it up.. oh yah it's a ..crime! I hear arson on the
radio as well, but I don't ask people to commit it, then claim that it is
has to do with scanners.

Here's where you reported me:
"Sick of your OT shit... Reported...

Abuse@attbi.com I sure will be more than happy to deal with you...

And no, your bogus wanna-be eBay line isn't going to save your ass...
"

Here's a post from you with obscene language:
" If you want war, go
screw your neighbors wife... That should bring about a pretty decent war!

PH"

And another rude one:
"Obviously you haven't been looking too hard then... They are going for
OVER
a thousand...

> because of your: (snip)

Don't waste your time, John. He is trying to provoke fights with ham operators. He knows others in the newsgroup will as likely blame the ham operator as himself for these fights. And that only harms the image of ham radio, especially if he can keep the fight focused solely on ham radio (his goal - notice he has not mentioned CB, his own actions, or anything else).

Of course, we know his attitudes are consistent with those of most outlaw CB'ers (which strongly suggests he is one), but he is counting on the fact that other readers in this newsgroup will not know that. Instead, he is hoping others will see him as a regular guy, just like the typical reader, out to expose the "evil deeds" of those "horrible" ham operators (the "evil deeds" in this case is compliance with the rules and regulations of this nation).

Like so many today, he feels he has a right to violate this nation's rules and regulations without negative reaction from others. Instead, he is totally absorbed in the quest to please himself without regard for others.

No amount of argument is going to change that attitude. More civilized people know a society has to work together within the framework of rules and regulations for the benefit of all, including themselves - that each person gains when all consider the impact of their own actions on others around them. This concept is alien to the person focused solely on himself, so he instead sees it as an affront when Ham Operators object to his (and his friend's) often harmful actions (to radio and other operators).

My advice is simply respond to any worthwhile issues he might raise and ignore the rest. You will serve ham radio far more by doing so.

Where does it say that you are not allowed to post something for sale?
Newsgroups Policy
This document outlines Road Runner acceptable use guidelines as they apply to newsgroups. It outlines the conduct that should be employed when using the newsgroups as well as procedures that Road Runner members can use to avoid newsgroup abuses. It also gives pointers to other resources available to learn more about newsgroup culture.
Guidelines
It is important for members to make themselves aware of the various conventions, guidelines and local culture in newsgroups before becoming an active participant.

Newsgroup Terms of Service Violations
The following actions would violate the acceptable use policy when utilizing news services through the Road Runner network, backbone and/or infrastructure.

Road Runner provides an uncensored newsfeed. As such, Road Runner does not control the content of the newsgroups available to you. Road Runner believes that decisions about which newsgroups and messages to read are best left to its customers. Screening software is available from third parties, and it is your responsibility to use such tools if desired. Road Runner is not responsible for the content of any newsgroup message, whether or not a Road Runner customer posted the message.

If newsgroup postings are in violation of the acceptable use policy, Road Runner at times may restrict or cancel subsequent postings if they affect the service.

The sending of multiple similar articles to newsgroups constitutes a violation.

Harassing others by "news-bombing". "News bombing" constitutes sending more than 10 MB of data to a newsgroup.

The cross-posting of advertisements for products, items, or services which exceeds the commonly held thresholds and guidelines of the USENET community, will not be tolerated. Article posts should be on-topic to the particular newsgroup charter. Articles should not disrupt any newsgroup with frivolous, excessively vulgar or repetitious postings is not allowed.

Road Runner filters newsgroups for spam based upon commonly accepted Internet criteria, a copy of which can be found at http://www.killfile.org/~tskirvin/faqs/spam.html. We filter binaries from non-binary groups, and filter HTML from all newsgroups except the

microsoft.* hierarchy and local groups.

We are not responsible for the content in any of the newsgroups. Like all content on the Internet, some newsgroups may not be suitable for all users. Each user and/or primary account holder should keep this in mind when accessing the newsgroups. There is commercial software available at most computer retailers that can provide "filtering" (screening out newsgroups or content which may be objectionable).

Terms of Service Actions

Upon receiving a complaint from another customer, newsgroup facilitator or another third party, Road Runner will promptly investigate the issue in question and determine the appropriate action, if any. All involved parties will be notified of the decision, action, and rationale. Examples of potential actions follow:

a.. Most valid complaints will generally result in the offending article(s) being cancelled and the Road Runner member receiving a Terms of Service warning. Additionally, your access to newsgroups may be restricted depending on the nature and severity of the violation.
b.. Second instances of abuse will generally result in your account being restricted from newsgroups access. Second instances of commercial abuse of newsgroups or of spamming/chain letters will result in your termination from Road Runner.
c.. Third instances, any combination of abuse, or particularly serious offenses will generally result in your termination from Road Runner.
Submitting Complaints
To report a violation of Road Runner's Newsgroup Terms of Service by a Road Runner customer, send a complete copy of the article or e-mail message to abuse@rr.com.

If you are reporting a spamming incident (Usenet), it is important that you forward the suspected spam with FULL headers. Without it, we will be unable to discern where the Usenet post originated, and will not be able to assist you.

To obtain full headers in:

Outlook / Outlook Express 4.x:

1.. Open the Usenet post and select Options from the View menu.
2.. You will see a box labeled Internet Headers. Highlight and copy (right-click and copy) these into the e-mail you send to us.
Outlook / Outlook Express 5.x:

1.. Open the Usenet post and select Properties from the File menu.
2.. A box will appear with General and Details tabs. Select the Details tab and copy the headers of the message from there.
Netscape:

1.. Open the Usenet post and go to the View menu. Pull the Headers menu over and click All.

2.. Highlight the headers displayed in the post and copy them into the e-mail you send to us.
Gravity:

1.. Open the Usenet post. Go to the Article menu and click Show Full Header.
2.. Highlight the headers displayed in the post and copy them into the e-mail you send us.
Facilitation and Time Warner Communications Employee Participation
Road Runner newsgroups may have a facilitator, which could be either a Time Warner Communications employee or a customer. In general, the facilitator is responsible for:

a.. Maintaining the FAQs for the newsgroup. The FAQ is one of the central pieces of value of the newsgroup, as it is the mechanism by which we capture the learnings from the group over time. It will include answers to the most common questions discussed in the group as well as capturing any valuable threads. The FAQ will be reposted on a regular basis in the newsgroup.
b.. Ensuring that postings are closely related to the main newsgroup topics.
c.. Deleting posts which he/she deems are inappropriate. This will be done only in extreme circumstances as outlined in the NEWSGROUP TERMS OF SERVICE VIOLATIONS above.
d.. In addition to the facilitators, other Time Warner Communications employees may participate in various forums at their own discretion. Unless specifically noted, comments and postings made by Time Warner Communications employees who are not designated facilitators are those of the employee and not necessarily those of Time Warner Communications.
Expire Intervals
We will attempt to maintain a 45-day expire interval for local Road Runner newsgroups. We will attempt to maintain a 3-day expire interval for binary newsgroups and a 7-day expire interval for non-binary newsgroups. This may vary depending upon the size of the USENET feed received on any particular day.

We reserve the right to reduce the expire intervals on any of the groups if volume becomes excessive.

Questions
If you have questions about newsgroups or an article you would like to post, you have several avenues you can pursue, including:

a.. Checking for FAQs and Charters in a given Newsgroup.
b.. Asking the facilitator of the specific Newsgroup.
c.. Refer to Help & Member Services.
d.. Contact us at 866-321-2225 (Voice). Hearing impaired customers can contact 877-311-8333 (TTY) for technical support.
Time Warner Communications reserves the right to modify newsgroup policies and procedures, including but not limited to, imposing additional restrictions at any time. Further, Time Warner Communications has no

liability regarding information contained in the newsgroups, including but not limited to: viruses, content, and parental control.

You need to do a bit of research and see EXACTLY what the US policy toward Iraq IS and HAS been. Nothing has changed. You liberals want to latch on to the WMD aspect - and we're just STARTING to look for those - the coalition didn't send in armies of weapons inspectors, and that wasn't their primary objective. How many years AFTER WWII were the atrocities of the Nazis still being discovered? And what makes you so certain that Iraq DIDN'T move WMDs to Syria? Doesn't fit into your little world?

Again, the WMD thing is an overplayed issue, and only a SMALL PART of the US policy toward Iraq. And I don't think that anyone can debate the fact that Hussein did NOT comply with all of the UN resolutions.

Universal Radio (www.universal-radio.com) has been around a very, very, long time. My father used to order stuff from them many years ago and I've ordered stuff from them many times over the years. In fact, I plan to buy my next shortwave from them in a few months (the Sony ICF-SW100S or perhaps the 7600GR). I've never had any problems with Universal Radio and I seriously doubt you will either.

My question to Dan's ISP was.. If the newsgroup allows this type of posting
and they (ISP) don't, then WHY do they carry this newsgroup?
I consider SPAM as being e-mail sent to my e-mail address that I did not
ask to receive..
When I visit a newsgroup, I have the option to read the posting of others
or NOT..
IT'S MY OPTION!!! Just as He/She had the option to do so....
(My thinking) Maybe someone offered a price to Dan for the 2006 that he
thought he should buy it for and Dan did not accept or just an A HOLE..
Probably the latter..

The ISP's should read the newsgroups rules & regulations and base it from
there if there is a question... If it's not within their rules, then they
should not carry it...
Good luck Dan..
Darrell~kg4fbg

3071. Re: MY ISP HAS ANSWERED

Newsgroup: rec.radio.scanner
Date: 2003-04-18 02:43:11 UTC
From: "Dr. John" <frellyou@privacy.net>
Message-ID: <CDJna.196$V2.8718@eagle.america.net>
Source record: 32534
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

No, I have a full knowledge of FTP, however the anonymous FTP login would
not work.

Alrighty. I'm pronouncing this thread dead, at least for me. There's nothing more that I think I'd want to respond to, so it goes to the thread killfile.

The disarming of Iraq was the reason for invading. Nothing else. Their
purpose changed to the liberation of Iraq midstream. The WMD disarmament
should remain their primary concern, as if there were any actual WMD
floating around, they would be extremely dangerous falling into the hands of
looters. And if there are 100 trillion tons of WMD (a independent analyst's
research indicated that is how much Iraq COULD have), then where the fuck is
it all? How do you hide 100 trillion tons of stuff that has very little to
no weight, such anthrax particles, gases, smallpox (microscopic).
It is rampant speculation that Syria was given the WMD. No real proof, or
surveillance indicating that is so.
Sure, Hussein didn't comply with all of the UN resos, but neither did
Israel. We aren't attacking Israel for their known WMD. How are we so sure
that they won't fall into bad hands?

>I'd find another internet provider if they think they can cancel you out for
>posting on eBay. What a bunch of retards.

According to the evidence given in Mr. Conti's post, they DIDN'T say
they would cancel his account for posting on eBay. It was Mr. Conti
who posed the hypothetical question,

>If I post something for auction on eBay then, am I in violation?

The ISP merely said

>>We just ask you to be more careful in the future of what
>>you post on newsgroups because this could affect the status
>>of your Roadrunner account if we receive any more complaints.

In other words "we received a complaint, so please be careful in the
future." That doesn't seem so terribly unreasonable.

I for one would prefer that for-sale posts be kept in the newsgroups
designed specifically for that purpose -- it's best not to get started
down the slippery slope. But I recognize that this opinion seems to
be in the minority here.

(And no, I wasn't the person who made the complaint. :-))

regards
C.

Is it the Radio Shack PRO-2036 or PRO-2045 by any chance? I think the Pro-2036 had the full 800 mHz, but was only double-conversion, but the newer PRO-2045 was triple-conversion, but did not cover the full 800 mHz band. I have a European PRO-2045 and it is a great scanner. I, too, have the CTCSS board and it greatly enhances it in my opinion.

For one, it was a command, not a wish.

For two, saying "Kum-ba-ya" isn't disagreeing. That's a way of taunting and discrediting anyone who even remembers, 4 decades ago, when "kum-ba-ya" was even used regularly as a chant in protests.

That is what is outrageous.

In order to lead you from the darkness of ignorance, I will explain,
Kum-by-ya was not a protest chant.

It was a song sung by all the pot smoking, LSD using hippies. It epitomizes
the position of people who think all the worlds problems will be solved if
we just sing and are touch feely enough.

That is not true at all. I recall singing that song around campfires in The Boy Scouts long before LSD and Pot were thought of in the general population.

Nice try (Dr.) lol,

Different context, what year were you in scouts?

The slaves also sang it during the civil war period. Again not in context.

In reference to the anti-everything folks, my example was in context and I stand by it, your protestation to the contrary. Q.E.D.

<sigh>

The WMD issue was never the sole basis for the actions in Iraq, and wasn't stated to be so. The United States policy toward Iraq was clearly stated by Edward P. Djerejian, the Director of the Baker Institute For Public Policy, at Rice University. It was presented at the IISS/CEPS European Security Forum Meeting in Brussels on September 9, 2002.

"The U.S. decision to refocus the world's attention on Iraq and the threat it poses to international peace and security under Saddam Hussein results from the ongoing adjustment of U.S. strategy as a consequence of the attacks of 11 September 2001. The U.S. is leading the campaign against global terrorism - a campaign that can only be won by successful international coalition building. For some time before 11 September, the nexus between weapons of mass destruction (WMD) and terrorist groups and states that support terrorism had been identified as the major strategic threat. This definition is at the core of the new U.S. strategy. Due to the nature of this threat, this definition has also given rise to the concept of pre-emptive strikes, and it has implications for the established policies of containment and deterrence. For building and sustaining effective coalitions, the U.S. will have to work with its allies and partners to build on these changes of its national security strategy for the needed elaboration of an international strategic framework and agreed policy for dealing with the threat."

As the formulation of the Administration's policy on Iraq was evolving, a range of positions on the approach to Iraq has been expressed up to the summer of 2002 among Bush Administration officials. President George W. Bush himself established the link between Iraq and terrorism by stressing the need to deny sanctuary to terrorists anywhere in the world [1] and pointing to the totalitarian threat posed by state sponsors of terrorism with potential access to weapons of mass destruction.[2] He also declared that it was the stated policy of his government to have regime change in Iraq,[3] as U.S. legislation indeed calls for since 1998, believing that unlawful aggression and the pursuit of weapons of mass destruction are the essence of Saddam Hussein's rule and would not end as long as he was in power. However, Bush put the issue of full compliance with UN decisions on the dismantlement of Iraq's weapons of mass destruction programs at the center of his international efforts vis-�-vis Iraq, insisting that the issue here is not inspections but disarmament.[4] On September 15, President Bush will be addressing the subject of Iraq in a major speech at the United Nations.

At the same time, Vice-President Richard Cheney advocated determined U.S. leadership to force Saddam Hussein from power in his remarks before a

veterans group in Nashville in August 2002. Cheney said that old security doctrines did not apply in the new strategic environment. Containment was not possible when dictators obtained weapons of mass destruction and were prepared to share them with terrorists who intend to inflict catastrophic casualties on the United States. He also claimed that "many of us are convinced that Saddam Hussein will acquire nuclear weapons fairly soon". A tentative U.S. approach to Iraq would mean that Saddam would simply be emboldened, and it would be even harder to assemble friends and allies to oppose him. In a post- Saddam world, however, moderates in the region would take heart and extremists would rethink their commitment to Jihad, and the broader cause of Middle East peace would be advanced. Cheney assured his audience that the Bush Administration would not simply look away, hope for the best and leave the matter for some future administration. He also promised that the U.S. would not turn its back on Iraq after Saddam's departure but would stay to help it rebuild with "territorial integrity" and to craft a democratic, pluralistic, ethnically representative government.

Secretary of State Colin Powell highlighted the need for the United States to lead the international community in its approach toward Iraq and build international support. He stressed the role of the UN Security Council and WMD inspectors as a first step toward enforcing compliance and disarmament on Saddam Hussein and his regime, with serious consequences if he does not comply.

NOTES

[1] "We have entered the second stage of the war on terror - a sustained campaign to deny sanctuary to terrorists who would threaten our citizens from anywhere in the world." (Remarks by President Bush at The White House, March 11, 2002).

[2] "The evil that has formed against us has been termed the new totalitarian threat. The authors of terror are seeking nuclear, chemical and biological weapons. Regimes that sponsor terror are developing these weapons and the missiles to deliver them. If these regimes and their terrorist allies were to perfect these capabilities, no inner voice of reason, no hint of conscience would prevent their use." (Speech by President Bush at the German Bundestag, May 23, 2002.)

[3] Press conference by President Bush, July 8, 2002.

[4] President Bush speaking to congressional leaders on Iraq, September 4, 2002.
~~~~~~~~~~
Hussein thumbed his nose at the UN, and only a fool would believe he complied with all UN resolutions. You people want to whine, and have no idea what you're talking about.

Wait longer? Give it more time? How long has the world tried to deal diplomatically with North Korea? What's that you say? Since the 1950's? Oh, allot of good THAT did - now they threaten that entire REGION, and even have the CHICOMS nervous.
~~~~~~~~~~

Before you fall into the trap of repeating liberal babble, do some homework.

No, Americans - and the supporters of the coalition, which consist of a much higher number of countries than the handful of insignificant countries that oppose the actions in Iraq, and each one of THOSE has it's own reasons for opposing it - monetary reasons, that is...

That's one of the things that drives france so nuts - more European countries SUPPORT actions in Iraq than OPPOSE it - france doesn't want to recognize those countries as even being a PART of Europe, as the more countries enter the EU, the less significant france gets (like they were ever significant in the FIRST place).

France is full of itself, and only wants what it can get on it's OWN terms - they use their veto power to thwart an action that should have taken place LONG ago, yet thumb THEIR noses at the UN when it comes to THEIR actions in places like Africa.

Once again, apologies to all for this continued diatribe as I know that folks like "Pappy" are busting with good and informative radio related information, but I just felt the final chapter in this matter had to be told...

As a result if the last admittadly long e-mail sent to Gilbert at my ISP, he responded by sending me their Newsgroup Use Policy. I will not take up bandwith with it's entirety, mostly legal mumbo jumbo, but the two most cogent points relative to this matter are listed below:

The sending of multiple similar articles to newsgroups constitutes a violation.

The cross-posting of advertisements for products, items, or services which exceeds the commonly held thresholds and guidelines of the USENET community, will not be tolerated. Article posts should be on-topic to the particular newsgroup charter. Articles should not disrupt any newsgroup with frivolous, excessively vulgar or repetitious postings is not allowed.

Upon serious reflection and soul searching, I must be a man here and plead guilty.

During my last flurry of radio sales, I did in fact cross post my ads to numerous groups at once, and except for rec.radio.swap, technically, FS or FA posts ARE off-topic in the other radio groups.

Now, I realize that there has been much debate about this, and opinions. The fact that it is done all the time is no excuse in the eys of the ISP. They put these use policies in place to protect themselves, then basically turn a blind eye, until they receive a complaint. At that point they are obligated to take action, which basically in the first offense is to put the customer on notice. That is what happened to me.

Does this then absolve the newsgroup Nazis of their stupidity? No. It would be better if we self-policed the groups rather then running to ISPs.

I informed Gilbert at the ISP that had he simply given this explanation up front, in the original letter, rather then running off about "commercial postings", we could have saved each other much grief.

This has certainly been a learning experience for me and hopefully all users here. I think that in the future, FS or FA postings to rec.radio.swap ONLY would be allowable by the ISP, and should satisfy the girly girls as well.

Other posters will continue to do as they want, but unfortunately I am now on notice, so I will abide by the rules.

Thanks for all the support offered here.

Dan

And it's just as ridiculous NOW as it was THEN, when the hippies were all tokin' it up and had no IDEA what was really going on. They were stoned out of their skulls and lost touch with reality.

Same thing today.

Sure - like Baghdad Bob told us the truth, the Syrian bozo is ALSO telling the truth - even though intelligence operatives from several countries have noted members of the former Iraqi regime in Syria, Syria says "no - it isn't true!".

Right. And as Baghdad Bob said, ""I can assure you that those villains will recognize, will discover in appropriate time in the future how stupid they are and how they are pretending things which have never taken place."

Get a grip.

Simmions? No. Simmons? No. But my long lost relatives are the simians (monkeys), and technically so are yours.

The distinction is that a pound of lead has higher weight per molecule (by stored volume) than the molecules in feathers do, and would acquire such a pound in a smaller stored volume than a pound of feathers would.

The hypothesis (flaws or not) is that 100 trillion tons of, lets say, anthrax, would need to be in a much larger stored volume to acquire such a weight.

You get me?

John

Looks like it's a war of the Doctors!!! Muwahahahahaha. Well this war of words is taking up all my spare time and I'd rather be doing something else. So please consider your navel while I don't reply to your anti-"anti-everything" posts.

BTW, I'm also anti-illegal drugs (and favor keeping them that way) and cigarettes (total ban). How does that fit? I'm not a liberal, I'm not a conservative, so what am I????

by
> Edward P. Djerejian, the Director of the Baker Institute For Public
Policy,
> at Rice University. It was presented at the IISS/CEPS European Security
> Forum Meeting in Brussels on September 9, 2002.

I will quote from a speech he made to the United Nations General Assembly on
12 September 2002. This is the first paragraph of what he (the United States
and the United Nations) "now expects of the Iraqi regime."
"If the Iraqi regime wishes peace, it will immediately and unconditionally
forswear, disclose, and remove or destroy all weapons of mass destruction,
long-range missiles, and all related material. If the Iraqi regime wishes
peace, it will immediately end all support for terrorism and act to suppress
it, as all states are required to do by U.N. Security Council resolutions."

I revoke my previous statment about it being the ONLY reason for invaded.
However, in my educated opinion, putting THAT paragraph sure elevates the
cause of WMD above anything and everything else, including the "Liberation
of Iraq" catchphrase the Pentagon chunked out when it became evident that
their top-priority of disarming Iraq of it's WMD would not be enough to sway
the American public to their, to this day, unfruitful cause.

<snip>

> Hussein thumbed his nose at the UN, and only a fool would believe he

Apparently long enough. The brute show of force in Iraq was enough to convince them to deal diplomatically with us.

>
> Before you fall into the trap of repeating liberal babble, do some homework.
>

I didn't repeat liberal babble, it was just me repeating myself, actually. And apparently I needed to rethink my repeated original point of view.

Hey, everybody's got their own "Baghdad Bob". Just as we based the top priority in the war on Iraq on WMD that were identified to be at certain places and turned out to not be at those places, or even moved from those places.
Faulty intel does not make for a good war.

Lies from CNN my arse. They were prepping obit pages in case of these people actually dying.

And yes, the stock market would probably crash if Dick Cheney, big-business's man in the White House, was gone.

Oh, come on - against death and destruction? What the HELL are the French doing in Africa - especially the Ivory Coast? Don't be so sanctimonious. We've been cleaning up their messes for generations, and now they want their "own" organization, "LIKE" the Un, to serve the ideals of the Francophone.

France against death and destruction? is that why they shipped so many Jews off to death camps to appease their Fuhrer? The french have ALWAYS used military issues to get their own way - hell, why do you think we ended up in french Indochina? It was the only way to get their support for NATO. Think that's bull? Look it up. If france is so peaceful, why did they sell Mirage fighters to Iraq? They KNEW they wouldn't be used for DEfensive purposes. What about the puppet government that france set up in Mexico in 1864? What of the Empires of King Louis XIV and Napoleon Bonaparte? What of france's unconditional support for Rwanda until the early days of that nation's 1994 genocide? France's role in Rwanda's 1994 genocide stands as the Fifth Republic's bloodiest foreign campaign, which is all the more ironic being that it failed. The policy was a bipartisan effort led by a Socialist, President Francois Mitterrand. French troops then returned to Rwanda under hastily granted U.N. auspices to establish a safe haven that, while no doubt protecting many innocent Hutu refugees, also protected countless former regime members turned genocidaires. Although human-rights groups already knew the names of many of the lead suspects, French troops did not apprehend even one. Today France, as part of its regional efforts to build anti-American alliances, is pursuing a similar strategy in the Balkans, where French troops have consistently failed to arrest Serbian war-crimes suspects who seem to move about freely within France's U.N.-authorized zones of control.
What of the bloody battles and deaths inflicted by the french in their attempt to hold onto Algeria? After eight years of savage struggle against French colonial rule, Algeria won independence - at the cost of nearly one million lives. Today, Algeria's split personalities are at war, as those who want to return and find rebirth - or just solid ground - in the nation's traditional roots battle to the death against the Europeanized elite. France plays a central role in this struggle by providing money, arms, intelligence

and diplomatic support to the military junta, led by President Liamine Zeroual. Paris is determined to maintain its hold over Algeria's oil and gas, and to block any popular Islamic government that might inflame the millions of downtrodden Muslims in France's industrial slums. Maintaining control of Algeria through proxy rulers is an essential part of France's strategy to retain its discreet, neo-colonial empire in West Africa and the Sahara. Free elections and human rights may be fine for some nations, but not Arabic-speaking ones. France keeps authoritarian regimes in power in Morocco, Algeria, Tunisia and Chad. Democracy, according to the french, is for those without natural resources. France bears a heavy responsibility for the continuation of the barbarity and slaughter in Algeria.
France's intervention in New Caledonia - initially a counter-insurgency operation against pro-independence guerrillas - later became especially controversial owing to the use of the islands as a base for French nuclear tests in 1995. These were resumed by the newly elected Gaullist president, Jacques Chirac, in the face of almost unanimous international opposition and by overturning a moratorium imposed by Mitterrand.

From the African Security review:

"Post-Cold War rivalry between France and the Anglophone world in Africa takes many forms. At the one end of the spectrum are the ongoing attempts to insert a Francophone facilitator (in this case President Omar Bongo from Gabon) either to replace or at least 'co-facilitate' in the peace processes in Burundi and/or the Democratic Republic of Congo. In both instances, the intention is to usurp or arrange for a Francophone successor to former president of Botswana, Sir Ketumile Masire (in the case of the DRC), or former President Nelson Mandela of South Africa (in the Arusha peace process on Burundi). On the basis that a large number of people in both countries are English-speaking, Botswana and South Africa are defined, ipso facto, as instruments of American foreign policy in French eyes. This simplistic categorization can have unintended effects in some instances. A recent example is the active support to the Omega Plan of President Abdoulaye Wade as a 'Francophone' alternative to the 'Anglophone' Millennium African Recovery Program. The two plans were merged only days before the July Summit meeting of the Organization of African States (OAU) in Lusaka to constitute what is now called the African Initiative. In the process, French action frustrated South African foreign policy ambitions for no apparent strategic purpose apart from opposition to what is perceived to be Anglophone. Thus, Paris set itself up as an obstruction rather than a potential South African ally in the region."

Talk about arrogance and paranoia? WHO is the "imperialist"? Because Iraq is on the front pages and all the news, the aggressions and ambitions of France seem to go unnoticed, or deliberately ignored.

Where do you come up with this stuff? Haven't you EVER read the US policy
toward Iraq? Read some of the other posts - I've already posted it here.

I think Batman77 is just the ticket. Good choice , very catchy and attention
getting. That is all ya need really..... oh yeah and just a transmitter.
P.S. when you stop transmitting say " StarTrek OUT!" really loud.

resolutions."

Well, as stated before, the inspections/searches for WMDs are only just beginning - the coalition never sent armies of "inspectors" in. We're just now back-tracking and cleaning up cities that were by-passed to get to major objectives (Baghdad, et. al.) I have a hard time understanding why some people persist in the belief that all things would, could or SHOULD be done all at once, with immediate results. Let's wait to see what transpires in the weeks ahead before crying out for "proof" of the WMDs. General Franks has many weapons at his disposal, but none of them is a magic wand, and he still hasn't found the blonde in the bottle that can immediately grant his every wish. One of the things that bothers me is the hypocrisy that now exists regarding the old sanctions - the same people that were convinced that there were no WMDs are now saying that the sanctions should not be lifted because there has still been no full disclosure regarding Iraq's WMDs...

HUH???

> I revoke my previous statment about it being the ONLY reason for invaded.

The implication is made by those that say the war in Iraq is "illegal". A
comprehensive study of the resolutions many just seem to want to TALK about
would tell you otherwise.

> > Wait longer? Give it more time? How long has the world tried to deal

Funny how that works, isn't it? bin-Laden had stated that the United States
had the greatest military in the world, but not the stomach to use it - thus
9/11. It's about time to stop dilly-dallying with these people. In that
region, in particular, force is the ONLY thing they understand. Force shoul
always be used as a last resort, but you have to know when to say when...

What you are looking for is called a cell phone.

All scanners (or almost all) sold outside the USA are sold to
people who are assumed to be law obidient citizens. And since the
law says we may not listen to phone calls, there is no reason to
block the scanners.

Buy your scanner in Canada or Europe if you want to bypass the
rules made by the nation that in the last 10 years has limited
freedom more than any other nation.

My Trident TRX-200 covers 100KHz all the way up to 2195 MHz,
no holes, AM, FM, WideFM, CW, SSB (USB+LSB). Slightly larger
than the VR500 I think. Slightly worse built quality, more
features.

I find this part of the quote fascinating...

The cross-posting of advertisements for products, items, or services which
exceeds the commonly held thresholds and guidelines of the USENET community,
will not be tolerated.

Especially the part of "commonly held thresholds and guidelines" of the
USENET community. As FS and FA postings ARE a common occurence within hobby
related newsgroups... it would seem to me that it DOES INDEED constitute
precedent within the community for such posts. They made a mistake by
putting that proviso into the charter. They let the community at large
decide the standards. It's called democracy. :)

DC,

Here's "The Plan"

1. Post a FS/FT to Rec.Radio.SWAP.

2. Have a Friend pose a 'question' to you on
Rec.Radio.Scanner/Shortwave about your Rec.Radio.SWAP Listing.

3. Subject Title "Saw a this FS/FT Listed on RR.SWAP Any opinions on
the items or values of same ?"

Just because the Front & Back Doors each have Two Locks and a Dead
Bolt.
- Does not mean that a Window
- - Is not Wide Open
- - - The Window of Opportunity

>I, and others, might contend that they are not 'the law'. 'Laws' are passed by
governments. You might dream otherwise, but it is so,

Since you didn't create any of the three newsgroups in question and
obviously don't have the mental capacity to comprehend the newsgroup
formation process your contentions are meaningless and idiotic.

You are obviously a troll and probably one of the wankers who
compained to his ISP.

You will be ignored in the future.

However, that is simply wrong. Crossposting is a *good* thing.
(Please note that *you* crossposted your article to several
newsgroups, as I am doing with this reply.)

You are mistaking that with either multiple posting (a bad thing),
or with posting off topic articles in newsgroups where they do not
belong (also a bad thing).

I don't see that Dan was guilty of an violation of his customer
service agreement, nor of any widely recognized Usenet rules.

As mentioned by another, 155.205 / 186.2 is still in use ... atleast as of this January.

Have logged fire-related communications on 154.965 / 127.3. County Emergency Services is licensed for repeater ops on the channel.

Brick Twp Police use 453.050 / 127.3 and 453.250 / 127.3.

Brick Twp Rescue use 460.525 / 127.3.

My BC-300 is acting up again. When I turn it on the display flutters, I punch manual lock on to any channel and all it ok. When I push scan it goes back to fluttering. Any ideas? I really don't want to junk it, it's a good scanner. Since I bought it, eons ago I have had it repaired and I repaired it about 4 times.

I came to this news group so I can learn about scanners , and part of that learning is the market value of scanners . Seeing the price and hearing the Group talk of the value and performance of the scanner has helped me immensely . Were else do you go ? To a store were what they sell is the best ?
I would vote to keep the (for sale) on the news group !

Dan,

You have web space with your ISP so build a web site and post everything
there you did here and let the world have a look..

Paramedics in Ocean County are dispatched on 155.205 by Ocean County Sheriff's dept, as is most of the first aid squads with a few exceptions (Dover, Seaside, Brick). I have first hand knowledge of this. If they are listed as users of the 500 mhz system, they haven't begun using it.

> destruction.

Saudi was going to kick our military out, because of the heat from bin
Laden types, and because they no longer felt threatened that Iraq was
strong enough to invade them and take their oil.

So we needed a place to park our military for the times we needed to go
to war there. Iraq was available. In addition, a large military presence
would pressure Iran to behave - just as Finland always felt pressured to
not annoy a neighboring USSR. In addition, though Iraq posed no threat
to us, it posed some threat to Israel, and we may want to help them out.

In addition, we want to scare other nations out of proliferation - Iraq
shows we are willing to use the military.

In addition, we wanted to beef up support for military adventures, so that we can attack in other places without having to worry about peaceniks at home. Iraq is a good place because our odds of winning were 100 percent, and winning a war makes folks happy to go to war again.

So it's a good starter for the hegemony thing.

And of course we want to rule the world because we can - now that the USSR has collapsed we have a huge advantage, so let's wrap up the world as a US colony while the wrapping is good. Anyone who thinks about developing weapons which can counter our own - will be invaded. We plan to disarm all potential opponents of our Sheriff's rule.

I think that's the idea.

Right. No evidence for WMD. It's easy to say Iraq has them - just as its
easy to say Iraq has killer clowns from outer space.

Where's some evidence? I mean real evidence - not crude forgeries and so
on.

Is there ANY EVIDENCE at all?

I guess there is this - long ago, Iraq could make a lot of x and y, and
we have no proof they destroyed what they MIGHT have made.

BUt x and y, in the forms we know Iraq had them, go bad over time. And
the mere CAPACITY to make so much X doesn't mean they really used their
full capacity.

Isn't that the only evidence? That long ago Iraq COULD have made a whole
bunch of the stuff and we can't prove it got destroyed or tossed out?

Pretty weak evidence.

Ah, they MIGHT have giant spiders from mars, invisible to humans - we
just haven't spotted one yet...

Good argument you have.

What exactly makes you think that they HAVE giant spiders, or WMD?

Why do you believe in them any more than you believe in ghosts?

Boy if that's obscene to you, then you must have really lived a sheltered,
non-existant life!

> And another rude one:
> "Obviously you haven't been looking too hard then... They are going for
> OVER
> a thousand...

Sarcasm can sometimes be mistaken for rudeness by those that are emotionally imbalanced and unstable. For a little while there I actually thought you had a grip on life, however, based upon what you consider to be obscene and/or rude, I guess I misjudged you in the beginning. You really don't have a grip. Those initial posts of yours should have tipped me off, however, I just thought you were another troublemaker playing around with his new found ability to post on Usenet...

Please accept my apology as I don't want to be the one to push you over the edge. I'd hate for you to try to take your own life or something... We all hear about your kind (the emotionally unstable types) taking their lives on our scanners for time to time...

Just perhaps YOU might give a "shit" someday if you happen to have something
that you would like to sell, and some jack-ass turns you in to your ISP...
You just MIGHT give a "shit" then...

PH

P.S. You didn't help the bandwidth any by quoting his entire post within
your 2-bit reply... Better look in the mirror when you bitch about wasting
bandwidth!

Best give a listen to TG 0928 - Ocean County Sheriff Dept. Channel#5-
Paramedics Dispatch (in use) if you have the capabilities...

>Paramedics Dispatch (in use) if you have the capabilities...

I do have the capabilities (I monitor Ocean County police south) and I hear them being dispatched on 155.205 all the time. I am also a member of a first aid squad, so I know what frequency they are dispatched on. If you are hearing something on the trunked system, it isn't paramedic dispatch for Ocean County.

The ATI Radeon All-In-Wonder 7500 graphics card that I bought comes
with this type of software. When it senses a difference in the images,
it'll save the images to the harddrive of the computer. I've not tried
it since I don't have a camera of this type.

For sale...

Uniden BC 250D Apco P-25 Digital Police Scanner with Apco P-25 Card
Monitors Apco P-25 conventional, trunked 3600 & mixed mode,
Digital communications.
The unit is only 1 1/2 months old and is in mint condition.
Unit works great. I need to sell it because the agencies in my area went to
a different system.
Comes with all the original paperwork, box, battery pack & charger.
I will not split up the card and scanner.
I paid $650.00 and must take the loss and sell it as used.
So if are looking for one of these, here is a chance to get it at a great
price.
you can check my feedback on Ebay user rating tramd300@aol.com
use this link for a picture of unit
http://members.aol.com/TRAMD300/BC250Scanner.jpg
And use this link for the specifications of the unit
http://www.snowcrest.net/marnells/factsheet.htm
You get this all for $550.00 shipped in the USA only.
I will accept postal money orders only or if you wish to use Pay-Pal.
Price is firm...
Please email me direct for more info.
I check my mail every day.
Thank you...
tramd300@aol.com

WHAT??? Why the f*!k would I put my certification on the line for your
dumb ass? I have a family to feed, loser. I don't really care what
your reason is for needing that plate information, but unless you work
in law enforcement, you'd better not get it, and you have no right to
it. Give me a good reason why someone would risk their job for YOU?

Some nerve..

Go try that in alt.police or alt.lawenforcement or something and see
what kind of reception you get.

Hmmm. Seems to me all I heard for twelve months was an endless mantra "Sadaam must disarm or we will disarm him." There was no other stated issue, though side issues kept popping up depending on what day it was. To now say that WMD is not the issue is disingenuous, sorta like "Where's Osama?" Osama? Osama who?

Essentially quoting Hans Blix from an interview yesterday. But also based on the FACT that absolutely nothing has been found after nearly two months of ample opportunity and, more important, that no other state with long and extensive ties to Iraq was ever able to correlate anything the US asserted. Don't you think that if Iraq had such weapns and intended to use them that they would have been moved to the battle front?

Envy of what? You have it exactly backwards.

Everyone knows that the French are the most arrogant people on earth.
However, no one knows why.

Let me see if I can help your little brain understand what has happened
with an analogy.

Let's say you're a drug dealer in central Mexico with piles of drugs spread
out around your villa. One day you hear the police are going to visit your
villa in a months time and search for the drugs. Will they find any?
Probably not. It will take alot of detailed searching. It may even
require a search of your friends "place" next door.

Did this little story help you understand what has happend? Do you feel
like pulling your head out of your ass now? No?

Someone who I recognized from meat-space spammed several newsgroups a while back. Rather than send a complaint, I sent him a polite e-mail *asking* him not to do so and telling him why it wasn't kosher. He flashed back a nasty e-mail calling me a netcop, informing me that his business was doing quite well selling things on the newsgroups and telling me to mind my own business.

The kind of self-policing you suggest doesn't work. Anyone rude enough to ignore the newsgroup charters is rude enough to tell you to quit interfering with their spamming.

(Don't look at me. I quit trying to get rid of the 20% advertising in this newsgroup long before someone pointed out to me that the charter doesn't forbid selling stuff here.)

Right, to a point. Multi-posting makes multiple copies of the same thing on all news servers world-wide, while cross-posting allows decently written news servers to keep one copy of the article and serve it to multiple newsgroups.

But cross-posting (and multi-posting) can be rude if the article is off-topic in any of the newsgroups, or requests for information are involved (in the latter case, it's best to at least set followups to one group).

Cross-posting can stifle good discussion; replies end up distributed among several newsgroups, which not all people interested in the discussion subscribe to, and often people don't even notice the cross-posting and don't know to look for other replies in the other newsgroups.

3160. Pro 2004 Problem

Newsgroup: rec.radio.scanner
Date: 2003-04-18 18:18:26 UTC
From: mlangen@execpc.com
Message-ID: <6658a6d3.0304181018.53fc1266@posting.google.com>
Source record: 32476

Can anyone help me diagnose this RS Pro 2004 problem:

For several years, I have heard a very occasional, loud metallic "tink, tink" sound over strong NBFM signals. Recently, this has evolved to much-more-frequent (but still intermittent) crackling and crashing, sounding very much like strong QRN (atmospheric noise). It is not QRN, nor is it noisy pots (either AF gain or squelch). It is usually heard over a strong signal -- the stronger the signal, the more likely the problem. It is never heard without a signal breaking the squelch, nor while scanning among vacant channels. It is loudest in the NBFM mode, but can be heard faintly in WFM and fainter yet in AM.

Any guesses or suggestions?

Thanks,

Mark

This is a 2 month old MVT-7100, I am upgrading to the 9300 and will sell this one for $375.00 delivered to your door. It is mint with all original boxes and manuals. The manual has never been used.

In addition I am including a notebook with after market manuals and 8 1800 MAH Nickle metal hydride rechargable cells as well as the 4 original 650 MAH ni-cads that have never been used. A radio shack adapter to charge the battries is included. As this was a European version, it came without a charger.

This scanner covers from 100Khz to 1.3 Ghz with no gaps. All modes (AM, FM, WFM, USB,LSB on any freq). See http://strongsignals.net for reviews of this fine receiver.

3164. FS: Pro 2050 and Pro 92 scanners

Message-ID: <uek0av88lch4draqvohe9m7te79j74k2bp@4ax.com>
Source record: 32477

I want to thank everyone who repsonded to my message concerning john_lalonde@sympatico.ca both by e-mail and in the groups. Special thanks to the Canadian writers who offered information and help.

I have been able to determine that this person saw my ad posted in mics.emergency.services and not on the ham groups. While several persons admit to knowing him no one has been able to give his address.

Unfortunately, I had already deleted the e-mail containing his mailing address from my computer once I had mailed my package to him and he said his was sent to me, keeping only his e-mail address to confirm when the package arrived. Big mistake. No ham call, no mailing address, bouncing e-mail.

Again thanks to everyone,

Jim, W8EMS/9

You've confused cross-posting with multi-posting in your last
two paragraphs. Setting Followups-To only makes sense if the
subject is mostly off topic (for example due to subject drift)
in some newsgroups and not in others. Cross-posting does *not* stifle
discussion, it encourages it. Setting Followups-To to a single
group is what discourages discussion. It is true that often
people don't notice the cross-posting, but that has no effect at
all until somebody sets the Followups-to. At that point everyone
loses continuity because they are unaware that they should be
looking elsewhere for replies.

Setting Followups-to is counter productive to discussion, and
doing it without specifically stating so in the text of a
message is just plain rude and crude.

>>>>> "S" == Steve Uhrig <Steve@swssec.com> writes:

>> What percentage of police departments encrypt communications these days?

S> Not many...Adds cost and degrades performance...

This got me thinking, how about military aircraft? They must have
some communication in clear mode to talk sometimes to civil air
control. (When going beyond their personal Restricted Area, they must
say something to civil air authorities, no?)

And towers at military airports are merely at different frequencies,
e.g. 200~300 etc. Mhz here in Taiwan, vs. 118~136 civil, but not
encrypted?

Or do they have alternative frequencies with encryption when going into
"war mode"?

Can someone summarize the communications of a some typical peacetime military
flights, from the point of view of how much we scanner enthusiasts can
hear and how much we're missing?

Oh, now THERE'S a credible source. He STILL hasn't explained why he tried to conceal inforamtion in the reports.

> But also based on the FACT that absolutely
> nothing has been found after nearly two months of
> ample opportunity

<sigh>

The coalition did NOT send in armies of WEAPONS INSPECTORS. They are just NOW starting to look, and are STILL back-tracking to do clean-up operations. Why do you idiots insist that everything should be done at once, and if it ISN'T, well, that just proves your point??? The primary objective was to oust the regime of Saddam Hussein - nobody was given orders to stop along the way and search every nook and cranny to see what they can find.

> Don't you think that if Iraq had such weapns
> and intended to use them that they
> would have been moved to the battle front?

They had been playing a shell game with UN inspectors, and obstructing them at every opportunity - there's plenty of info on the net about that. Now, if YOU were forced to serve in your military, and THEN given orders to use chem/bio weapons - in your OWN country, would you FOLLOW those orders? Hell, most of the "elite" troops wouldn't even use their CONVENTIONAL weapons - they dropped them, took off their uniforms, and hauled ass.

Use your head.

3170. publishing frequencies hurts police/fire/ambulance depts.?

Newsgroup: rec.radio.scanner
Date: 2003-04-18 20:28:54 UTC
From: Dan Jacobson <jidanni@dman.ddts.net>
Message-ID: <87lly7ft2x.fsf@jidanni.org>
Source record: 32485

Some folks here in Taiwan say that if I post the police/fire/ambulance frequencies my friends and I have found, this will encourage pranksters to go and interfere on those frequencies. I say those who wish to transmit interference on those frequencies would have long ago transmitted, without needing our little lists.

They say I will hurt those cash starved police/fire/ambulance departments who can't afford fancier equipment (spread spectrum, I assume?). I say with a budget scanner within moments one knows the frequencies and even content of police/fire/ambulance communications so what's the big deal about a frequency list.

Anyway, it seems hushing up frequency lists just makes it take a little longer for us scanner enthusiasts to figure out what organization is saying "Unit 7, go to Central St."

Sounds like old restrictions on maps now that we are in the age of satellite images.

>Did this little story help you understand what has happend? Do you feel
>like pulling your head out of your ass now? No?

No, because the gist of the story requires us to
believe something that hasn't been proven true.

In our society, merely "believing" or "suspecting"
is not sufficient to cause an attack, no matter
what the cause.----unless, of course your top
advisors are un indicted ENRON and Big Oil execs,
and your daddy was made to look a fool.

It still remains.

The gravity of the original reasons why your
rat-fuck idiot started this war are NOT evident,
Nearly ALL the justification and promotion of this
war is centered around the "emotional appeal" of
"freedom" for Iraqis which was never sufficient by
itself to support a war.

Even a marginal idiot can't be fooled----or at
least I thought so until you posted.

"The Afghan Mujahadeens are the moral equivalent
of the Founding Fathers of America."

The points are well taken, but I think, as you seem to think, that publishing lists of freq's are not any threat to authorities. In fact, I think it is better for the public to know where they can monitor their public servants, and keep them in check.
If they've got nothing to hide (encrypted comm's, and other modes which are often used in the name of security and confidentiality notwithstanding) then they should be glad that the public knows where they can listen and evaluate them, and hear the job they do.

I do not know the exact frequencies but they are in the 2.4 gig range.

Why would one want to know about these anyway. IMHO Listening to the
data transmissions from these on a scanner isn't what I call exciting
and trying to pick up this stuff on your PC would be near impossible
because of the encryption that most of the people who use these put into
place.

3178. Pro 2052 Backlight dosen't work

Newsgroup: rec.radio.scanner
Date: 2003-04-18 23:55:36 UTC
From: WR <impact@snet.net>
Message-ID: <5d41av8v6vei08cih47nfpoa2kv17ut744@4ax.com>

Dear Scanner Group

I have a RS Pro 2052 and the backlight dosen't work
Is this easy to replace ? Is the part available at RS stores or does
it have to be ordered

Thanks for your help
Bill

Can we dispense with this thread.

WE are about radios.

there's a bombing and gunnery range nearby, and between range control,
the forward air controllers and the strike aircraft, on any given
morning its like listening to a private war. there are milair
frequency lists on the net. don't assume they are current though.

They must be re-broadcasting 155.205 because that's what's heard there. The
radios in our ambulances and our handhelds all operate on 155.205.

Uhhmmm. Seems to me if you start a war about something the first thing you do is justify the reason for the war. They have been looking, since day one. Zilch.

As for Blix, he did not hide, he did not emphasize items that seemed irrelavant and indeed turned out to be so

The primary objective was to
>oust the regime of Saddam Hussein

Yeah, well, depending on which day it was. That was the first reason, then it became WMD, then it became ... well, take your pick.

- nobody was given orders to stop along
>the way and search every nook and cranny to see what they can find.

Wrong! From the start the US has emphasized that it had teams on the ground even before the war started looking for WMD

FS and FA ads should be placed in the .swap and .marketplace
groups where they belong and leave the discussion groups for
discussion.

You know what?

Everyone has missed the boat here.

The answer is so simple, I can almost feel Mr. Roman willing you to just shut up and play the game...

This is how it works. ISP receives complaint, rolls eyes skyward then sends you the letter just so they can tell the accuser "See, we are doing something about it".

You respond to this letter and just say "No problem. Thanks for the tip."

That's it. Now your ISP can tell your accuser "See we asked him to stop and he said OK. That's the best we can do."

Next time you want to sell an item, post it as you always do. Like it never even happened.

That's the game you play.

A Uniden 780XLT or the handheld equivalent BC 245XLT will do just fine.
Both are trunk, but do just jim dandy on
standard frequencies.

No need to go and buy a Radio Snack.

Same frequency as all other 802.11b networks, approx 2.4GHz.
It uses spread spectrum, so to catch the signal, you need
a SS receiver, that will receive all 5 (or more ?) frequencies
at once.

The cheapest is a $50 wlan card.

That's your opinion and only an opinion.... a decade late. Since there is nothing in the charters prohibiting the sale or swap of radios or radio related equipment then it doesn't matter what your opinion is because the newsgroups have already been formed and the charters created. Perhaps you should have spoken up when the newsgroups were created to include in the charter that the swap and sale of radio related equipment was prohibited.

You didn't, case closed!

The reason you have someplace to post your opinion is because someone formed these newsgroups. When they formed these newsgroups they created charters to govern what is, and what is not acceptable for people to post here.

If you want to form your own newsgroup called rec.radio.scanner.d or alt.radio.scanner.d and create a charter that says the newsgroup will be used for discussion only and never for the sale or swap of radio related equipment then you are free to do so. Your opinion will then have some weight with the news providers. Until then you are using something that someone else created and following the rules, called charters, that were put in place when the newsgroup was formed.

I hope this cleared things up for you.

It might be helpful for both of you to broaden your thinking about the purpose of the talk group carrying EMS comms.

At this time, there MAY actually be no EMS personnel or squads actually equipped to operate on the trunked system. Or maybe just some EMS supervisors have radios.

It might still serve a useful purpose to patch 155.205 into a TRS talk group. Sheriffs department units would then be able to monitor EMS calls, as well as go "direct" with EMS units, if needed. This would be more-useful if S-O units are routinely dispatched for EMS calls in the county, or carry AED units in the patrol vehicles.

It may also be a matter of politics and money. The county may want EMS and the squads to move to the trunked system, but the agencies may be reluctant if they have to buy the radios, and the current radios work well.

Prior to visiting family in Ocean County in January, I noted that one online source showed talk group 00928 as "Sheriffs channel 5 / MICU" ... which is part of the reason I mentioned above that this talk group may be for the use / benefit of the sheriffs officers.

3209. Scantenna ST2 Antenna Opinions Requested ?

Newsgroup: rec.radio.scanner
Date: 2003-04-19 12:59:21 UTC
From: Robert11 <rgsrose@tiac.net>
Message-ID: <b7rh7d$kq6$1@slb3.atl.mindspring.net>
Source record: 32424

Hi,

Presently using a R/S Discone in my attic to scan 30MHz to 1.3GHz, or so.
Seems to work surprisingly well, but of course I really can't compare it
against anything.

Was wondering if anyone might have any opinions on the Scantenna ST2 ?
Have heardthat it "greatly" outperforms the Discones over this range for the
normal fm, and also the am aviation stuff.

I do need the broadband capability, as I listen all over that wide range
usually.

Any opinions on whether I should consider replacing the R/S Discone with the
ST2
would be greatly appreciated.

Might as well also ask: Any others in the $100 max range I should consider?
It will have to go in my attic (2 story Colonial).

Actually, I'm not at all sure that I can get the ST2 in the attic, as its
specs seem to say
that it takes a true 8-1/2 foot vertical clearance. True ?

Thanks,
Bob

Mine is the pretty much the same. If the charter allows it or the intent of the group implies that you can sell or swap, then it's OK, although they say you can't use your ISP account with them for commercial purposes. You have to upgrade to a commercial account instead. I can't imagine anyone making a real living selling radio equipment here, although I just watched a Drake TR-5 sell for $1600 on eBay. Wish I had kept mine...

Everything you ever wanted to know about a Pro-2052 :-)

http://www.radioshack.com/ProdSupport/DocumentDetail/DocumentDetailIndex.asp?P=support_electronics&D=2849&T=htm

Yes it's an easy fix, i.e. about 10min 9min to take it apart and put it back together 1 min to replace the part. The EL backlight is $18.00 from Radio Shack.

Mark-

Are you using an outside antenna or are you using a telescopic
antenna that is connected to the back of the 2004? Have you tried
moving the scanner to a different location?

FWIW: Its not about being in compliance with or a violation of the
ISP's 'Terms of Usage Rules".

Its about 'The Power' of the ISP to Yank Your Cord [.]

The ISP has 'The Power' and they whip you with it; right or wrong.

The Use of 'The Power' is about...
- Making a 'Bad Example'
- - A "Good Example"
- - - By the Use of Your Power.

Simply getting people to talk about 'Your Power': Amplifies and
Magnifies 'Your Power' in the eyes of the people you are attempting to
control. It is what people 'think you can do' that controls them the
most: Not what you actually do. 'The Power' is often simply
Perception and not seldom Reality. It is the Illusion of "The Power"
that Controls: Thereby minimizing the need for the Use of 'the power'.

NOTE: Most ISPs act like a police agency and use 'Their Power' (Fear)
by putting out a lot of plywood police cars {Caution/Warning
Notices/Reminders) on the side of the road.
[Hey - Gets people to slow down and stay within the limits.]

Peace Through Strength ~ RHF

Well, I think it'll be a white for the first aid squads to switch. Generally
the towns don't want to fork out that kind of money to volunteer organizations
to upgrade their radio systems and the squads usually don't have that kind of
money to spend either. Hell, county fire is still using a VHF-Lo (30mhz) band
for communications!

Why do you want a Radio Shit I mean Shack scanner Tony?? The biggest bang for the buck in a new scanner is the Uniden BC895XLT $194.95 You can get one from the guy at Grove Electronics http://www.grove-ent.com/bc895.html
or you can always check out eBay for a used rig
http://listings.ebay.com/aw/listings/list/category14956/index.html
I see a BC9000XLT on there right now going for $155.00
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3018762785&category=14956
this was Uniden's Caddy just a few years ago

George.

George I found this on there website
PL001 10791416 LAMP,PILOT 8V 0.2A L0200
Is this the correct part ?
It is the only part I can see that relates to any lighting RS says
part is $4.87 plus $2.50 shipping

Regards,
Bill

Good comeback JJ. I love an intelligent response. You know the old
saying better to say nothing and leave them guessing?

Since you have a few misconceptions about how newsgroups work you
might want to read a bit more on the newsgroup creation process.

http://www.faqs.org/faqs/usenet/creating-newsgroups/part1/

Here is the charter for rec.radio.scanner . It is very simple and
general and as you can see doesn't say much about what isn't
acceptable.

---

rec.radio.scanner is an unmoderated newsgroup which passed its vote
for
creation by 298:24 as reported in news.announce.newgroups on 25 Aug
1993

For your newsgroups file:
rec.radio.scanner "Utility" broadcasting traffic above 30 MHz.
The charter, culled from the call for votes:

rec.radio.scanner is a newsgroup for discussion about "utility"
traffic above 30 MHz. FM & TV-broadcasting, shortwave, amateur radio
and broadcast satellite-related material doesn't belong to
rec.radio.scanner because they have their own newsgroups. This
newsgroup replaces alt.radio.scanner. In addition, the

rec.radio.scanner will be gatewayed to a mailing list which will be
created as soon as possible after newsgroup creation, as there are
many who do not have access to USENET news.

You may also want to look at what a good charter looks like. This
charter for alt.astrology.moderated spells out in great detail what is
and what is not acceptable. As you can see the charter for
rec.radio.scanner is vague compared to this one.

Moderator submission address: astrology@stump.algebra.com
Moderator contact address: aam-board@stump.algebra.com
Technical problems contact address: aam-admin@stump.algebra.com

Charter: alt.astrology.moderated is a moderated newsgroup for
the discussion of all things astrological, including theory,
traditions, innovations, questions, study, practice, and
connections to related disciplines. There are no restrictions
regarding methods, systems, philosophies, or techniques.

Submission Rules: This group is intended specifically as a
forum for students and practitioners of astrology. If you are
uncertain about what is acceptable after reading this post,
please contact the moderators at <aam-board@stump.algebra.com>.

You may notice a delay in the appearance of your posts; this
is normal in moderated newsgroups. The moderators will try to
be prompt about processing the mail, and hope to have no more
than a 24 hour delay in sending your posts to the newsgroup.
Some posters may be robo-moderated, which means their posts will
appear more quickly on the newsgroup. Refused postings will
be returned to posters for modification, if their overall content
falls within the acceptable category as outlined below. This
does not include commercial solicitations, abuse, flames or
malicious provocation, or repeats of recently submitted posts.
Posts which appear on the newsgroup that have not been approved
by the moderators will be cancelled. The moderators reserve the
right to prohibit access from posters in habitual violation
of the rules. We define "habitual violation" to be no fewer
than three disallowed (as outlined below) posts, submitted within
thirty days or less. Abusive email sent to moderators will also
result
in the sender's prohibition from the newsgroup, as well as possible
actions taken by his or her ISP to terminate his or her account.

The following types of posts are not allowed:

1) Posts containing binary files, with the exception of PGP keys
(or similar schemes). Binaries should be posted in the
appropriate binary group with appropriate pointers.
2) Crossposts to more than four groups, to groups unrelated to
the topic, or to other moderated groups.
3)
a) Commercial advertisements and solicitations (more specifically,
Spam) except identification in signature lines, or legitimate
conference, book, publications, and educational courses
notifications.
b) Product and service advertisements unless a fee is paid for
such, in the sum of five United States dollars per ad, which
will be applied to the newsgroup's yearly technical expenses.
The option to advertise for this fee may be offered within
an appended comment to the refused post. Advertisers may
then respond to their refusal notice, to receive instructions
as to how to pay the fee, and when they may re-post their ad.
Please note that this offer applies *only* to products and
services of interest to the astrological community, and that our
stipulation, and acceptance, of the fee in no way indicates that
the moderators of this newsgroup personally will endorse your
product or service. This option of ads for fees is entirely
within the domain of moderator discretion and will be offered
according to the judgment of each or any moderator on duty.
4) Non-English language posts (without translation), posts
formatted in HTML, posts with signature lines exceeding the
USENet recommended five lines, or posts which the moderators
deem to be incoherent.
5) Posts that violate copyright. You must own the copyright, or
have permission to use copyrighted materials that do not
originate from USENet. Only short excerpts from copyrighted
materials are allowed under "fair use", with full author and
publisher credits.
6) Previously composed articles that have already been posted
within the last month. You may post pointers to articles in
response to requests, or offer to send articles via email.
7)
a) All personal attacks, abuse, and flames, including those based
on astrology. Claims of methodological, ideological, or
systemical sovereignty, or other forms of provocation, are also
prohibited. (Flaming is here defined as abuse, insults,
harassment, and suggestive slurs. Provocation is here defined
as content primarily intended to incite aggravation, indignation,
or outrage. All of the preceding is subject to the judgment
of the moderators.)
b) Any comments pertaining to any chart placement of another poster
in the course of a discussion without receiving prior consent
or invitation to make such comments.
8) Posts skeptical of the general validity of astrology, which are
more properly posted to sci.skeptic, or other newsgroups.
9) Comments pertaining to moderation policy or performance.

Questions,
comments, or complaints regarding moderation policies or
performance
must be mailed directly to aam-board@stump.algebra.com. Questions
or complaints regarding the modbot and technical difficulties may
be addressed to aam-admin@stump.algebra.com.
Complaints will be dealt with as promptly as schedules permit,
usually within a few days. Abuse of moderators, either in posts
submitted to this newsgroup, or in email, is strictly prohibited.
Abusive mail can and will be used as grounds for imposing bans.
See rules 7a, and 7b, for the current overview of what is
here considered abuse.

On-topic posts include discussions of techniques and applications
of astrology and related disciplines, including history, traditions,
and innovations. Questions from novices are welcome, along with
requests for horoscope and chart interpretations which are
accompanied by full birth data. However, please note that
while astrologers do often answer such posts, this constitutes
a form of pro bono (free) service and, as many posters are
professional
astrologers, they may not have the time or interest to do free work
on the newsgroup. Professional astrologers are as serious about
their work as any other set of professionals and frequently devote
hours
of preparation time for a single client consultation. It is not
difficult
to understand that this amount of work (and it *is* work!) can be
burdensome and self-defeating for an astrologer in the absence of
remuneration or compensation. Please do not expect that any response
to a request for astrological advice will be as comprehensive or
adequate for your needs, as would be a full consultation with a
professional, certified or peer-esteemed, astrologer. Also, please
note that astrologers, like psychologists, can be very individual
and eclectic in terms of the techniques they use and favor. The
moderators of alt.astrology.moderated may or may not be in agreement
with any statements or advice offered in response to questions on
the newsgroup, and we (the moderators) are not responsible for the
astrological opinions and advice which other posters offer on the
newsgroup, whether those opinions be offered by professional
astrologers,
amateur astrologers, or beginning, intermediate, or advanced students
of
astrology.

Additionally welcome are posts pertaining, and related, to the field
of
astrology, such as ethics, counseling, psychology, mythology,
metaphysics, divination, prediction, history, spirituality, education,
and
certification programs. Although this is a moderated group,

moderators
will not attempt to inhibit the free flow of ideas or self expression
posted in accordance with the rules. This forum expects, and
accepts, the civil expression of disagreements and criticisms
pertaining to the symbological interpretations, methods, theories,
and ideas encountered both here, in the posts of others, and in
materials published elsewhere.

>It also may be helpful (for you) if you read the full thread before commenting.

I have followed 18 posts regarding this thread, prior to this one.

>It's not - as my posted monitoring log of TG 0928 demonstrated..

All your post indicated was that comms were being aired over both the VHF channel and the trunked system.

And you, in two early posts (messages 5 and 10), have also referred to the talk group as OCSO channel 5, rather than an EMS channel.

Until your last post, which mentioned that Manchester was actually using some trunked radios, neither you or anyone else indicated they had seen EMS or a rescue squad will 500 MHz radios.

Don't you think that MIGHT have been helpful to mention at the beginning? It probably would have saved 8 or more posts!

The subject of what is or is not on topic in a newsgroup is
always an on topic subject for that newsgroup.

We might, however, ask that you trim excessive quoted text from
you responses though... There seems to be little point in
quoting 200+ lines that you do not make any reference to.

ID Tracker has been updated. This release corrects some issues
with conventional scanning.

http://bellsouthpwp.net/k/d/kd5eis/IDTracker/IDTracker.htm

Also, a new section was added to the Version History to document
know issues.

http://bellsouthpwp.net/k/d/kd5eis/IDTracker/IDTrackerVersion.htm

> I have aluminum siding on the hose will that have much effect on
> reception?

Probably won't help things, although if the transmitter is not far away it may not make a difference. Better to get an outside antenna if at all possible, though. You can put one up just about anyplace you would put a regular TV antenna, just as inconspicuous (if you have to worry about CC&Rs or cranky neighbors or whatnot) and will do wonders for your reception.

If you going to travel with your new handheld scanner, I would get one that will trunk track and
can be programmed by computer software. Surely you will be traveling to places that are trunked
and programming the scanner with computer software is nice. I have different scanner computer
setup files and load the scanner for where I am traveling. I use a Pro-92 and GRE software.
Will you be traveling to places that use APCO 25 digital?, if so you might look at the Uniden
digital handheld or the up comming GRE/RS digital scanner.

Hi guys,

ScannerDeeBee.

Well the subject says it all. We have finally finished our last beat
version for the scanner database.

This is very easy to use and can store around 200 million records if
your hard drive has enough room.

It can upload and download from the scanner in banks.

You can import from comma delimited text files.

You can transfer by cutting and pasting.

You can sort the data according to about 6 or 8 different criteria and
a whole bunch more.

Where do you get it??

Right here...
http://aluminator.tierranet.com/softservo/scannerdeebee/mainpage.htm

Please let me know what you think. My email address is at the bottom
of the "temporary help" page of the software.

I would definitely not buy a Bea***** oops. I almost said the "b" word. Radio Shack units (in my experience) are the best for your buck. The newest Pro-95 is usually on sale for around $250. It is computer controlled for downloading/storing frequencies. Trust me. Don't go the 'cheap' route with the 'other' scanner "B"rand. Realistics rule. If you pay cheap, you get cheap. If it is a used (e-bay) purchase, you are stuck with no refund posibilities.

You haven't been paying attention again Tony! If it weren't for
newsgroups you wouldn't be here asking this question. Threads make up
a newsgroup. If there were no threads like this then the newsgroup
would be dead. You can choose to listen to the chatter in this thread
or you can find another thread that is more suited to your tastes.
That's the beauty of usenet. Freedom of Choice!

3250. Re: need help picking a scanner

Newsgroup: rec.radio.scanner
Date: 2003-04-20 02:28:41 UTC
From: "Dr. Fred Hambrecht Sr" <w4jle@charter.net>
Message-ID: <va41ejdelfsh53@corp.supernews.com>
Source record: 32266

I am usually amazed when I see this kind of thing, particularly as a number of the Radio Shack units were made by Uniden and are simply re-badged Bearcats.

The Pro-95 is indeed a fine receiver. I purchased mine when they were on sale at $149.00 and it is the best buy I have ever made. It happens to be made by GRE.

I also have an AOR, Yupiteru, and a Bearcat. Each was selected for a different use and all perform the task they were purchased for. To state that any scanner is better or worse than another is meaningless with out the use being defined. My Pro-95 is totally useless for the Mil-Air Band, does that make it bad? My Yupi doesn't trunk...

You get the point, define the area of interest, then pick the scanner that meets your needs. If several brands meet your needs, compare specs. If your not sure how to do that go to http://strongsignals.net and read the reviews.

To dismiss a manufacture that has successfully manufactured and sold multi-thousands of scanners smacks of bias rather than information.

Every single text on Netiquette _does_ cover it. The charter for
a newsgroup only covers what is unique to that newsgroup and is
not required to contain a list of Usenet do's and don'ts.

If you want to play net lawyer, you'd best have read the rules
or you'll get disbarred your first day in court.

FYI: Usenet rules are learned they are not read.

That is called being overruled.

I am not sure if this is exactly what you are looking for but maybe it's
worth looking at:

http://motorsports.thepaddock.com/freqs.html

And that is called just plain stupid. You have to read the
rules to learn them. It would be a good idea if you did.

ok, Ok. OK! - Here's the Answer !

I have CHANNELED the "Founders" (The Wise Old Ones) of the 'original' UseNet News Groups. It has been a REVELATION to me to be "Guided" by their Un-Common Wisdom and Plain Common Sense. These 'Spirits' were the creative force of the progenitors of Rec.Radio.Shortwave, Rec.Radio.Swap and many more News Groups that are now maintained [Hosted] at Google Groups.

Revelation #1: The Old Rules were for the past millennium.

Revelation #2: The New Millennium 'requires' New Community Guide Lines (Not Hard and Fast Rules).

Revelation #3: Anyone Who - Post's To /or/ Post's On the "Rec.Radio.Shortwave" News Group is 'By Definition' is a MEMBER and should Read and Follow the Spirit of Guide Lines as Revealed by "The Wise Old Ones'.

Guide Line #1 (A Revelation) The General TOPIC is the Recreational Use of Radios for Shortwave and Broadcast Listening Related Activities. Amateurs (Hams) Are Welcome. Hence the Name of the News Group is Rec.Radio.Shortwave. Normal Rec.Radio.Shortwave News Group Activities are the Exchange and Sharing of Information, News, Events, Questions, Answers, Replies, ETC.

Guide Line #2 (A Revelation) The Comments and Observations about Current Events derived from personal listening activities of Shortwave, Broadcast and other forms of media are "Not Off Topic": But are 'not' the primary focus of the Rec.Radio.Shortwave News Group.

Guide Line #3 (A Revelation) "Private Party" 'For Swap/Trade/Sale/ETC' Radio Equipment and Accessory Materials that are Post On/To and 'Listed On' the Rec.Radio.Shortwave and Rec.Radio.Swap News Groups are acceptable as long as they are limited to an average of one per month in any three month period; not to exceed five to ten items per posting/listing.

Guide Line #4 (A Revelation) These "Private Party" (Are Defined as Non-Commercial Activities) are 'subject to' the "Honor System" by individual's themselves; and it is not the providence of any Rec.Radio.Shortwave News Group Member to monitor, police, or report and alleged violation by others of this Specific Guide Line.

Guide Line #5 (A Revelation) Group Members who do attempt to monitor, police, or report and alleged violation to an other members ISP are

themselves "In Violation" of the Guide Lines of the Rec.Radio.Shortwave News Group.

Guide Line #6 (A Revelation) Any Rec.Radio.Shortwave News Group Member may provide Documented Evidence of 'Commercial Activity' that Violates the Guide Lines of the Rec.Radio.Shortwave News Group to a Members ISP; provided they follow these specific procedures. 1. Provide a Copy of these Rec.Radio.Shortwave Guide Lines to the ISP along with a Copy of the "Alleged" Rec.Radio.Shortwave News Group Posting that Violates these Guide Lines. 2. Provide the "Accuser's" Rec.Radio.Shortwave News Group Membership (Screen) Name; A Valid E-Mail Address; and Full Legal Name and Complete Address. This is 'required' so that the "ACCUSED" can Factually Address the Issues of the Allegation and Resolve the Matters Raised by their Accuser; as is their Right of Due Process Governed by these Guide Lines.

Guide Line #7 (A Revelation) Membership Conduct - Sticks and Stones May Brake My Bones... Buy Names Will Never Hurt Me. The Golden Rule Applies with 'respect' to Your Self Conduct and Your Conduct Towards Others.

Guide Line #8 (A Revelation) [Behind "The Eight Ball" Activities] Criminal Activity that In-Fact Violates a Published Public Law should be reported to the Appropriate Governmental Body having Jurisdiction over such matters and not to ISPs and other non-governmental organizations. Any News Group Member may provide Documented Evidence of 'Criminal Activity' that Violates a Published Public Law; provided they follow these specific procedures. 1. Provide a Copy of the Alleged Rec.Radio.Shortwave Posting that Violates a Published Public Law. 2. Provide the "Accuser's" Rec.Radio.Shortwave News Group Membership (Screen) Name; A Valid E-Mail Address; and Full Legal Name and Complete Address. This is 'required' so that the "ACCUSED" can Factually Address the Issues of the Allegation and Resolve the Matters Raised by their Accuser; as is "Their Right of Due Process Under the Law".

Guide Line #9 (A Revelation) Frequency of Individual, Multi and Cross Linked Postings to two or three News Groups of the same content/message: Can be an efficient use of the News Group 'resources' for the Members and the Service Providers. However, it should not be a habitual modus operandi. With 'respect' to the Frequency of Individual, Multi and Cross Linked Postings: Individual Members are 'subject to' the "Honor System" by the individual's themselves; and it is 'not' the providence of any Rec.Radio.Shortwave News Group Member to monitor, police, or report and alleged violation by others of this Specific Guide Line.

oh no, Oh No. OH NO! - What was the Question ?

Just for the FUN of It ~ RHF
- The Right Honorable Faker of Revelations
- - In-the-Spirit of the 'The Old Wise Ones' of the

- - - Rec.Radio.Shortwave News Group.

As far as FS ads in the radio news groups, if we don't buy radios the groups
would be kind of useless.

As long as the siding does not go up past the start of your roof you will have no problem. But if it does, i.e. like say front and back you will have a directional antenna "side to side" only working in the direction where the siding is not.

I know that I've said many times that the Discone is probably the most OVER-RATED antenna used by scanner hobbiest. I've had a few Discones (before I know better). Now I have the ScanTenna. You can't even compare!

My ScanTenna pickups up aircraft nearly 300 mile away. Everyday I'm listening to F15's engaged in mock dog fights over the Atlantic in an area up to 200 miles north of me. Also with the same antenna I'm listening to bombing runs on a range about 150 miles south of me. Even the $100+ discones can't come close.

As far as an Omni-Directional ant goes you can't beat a ScanTenna. I use mine all the time to listen to 30-50 VHF Skip, 118-136 AM Civil Air, 138-144 AM MilAir, 225-400 AM MilAir and some 800 MHz trunking (BTW it pickup up an 800 MHz trunking system that's nearly 50 miles away just fine!).

Currently I have 2 ScanTenns, 1 AntennaWarehouse Scanner Beam (another really nice antenna), and 1 Create Log Periodic ($300 ant, its good but as far as receiving receives no better than the $60.00 AntennaWarehouse Scanner Beam). I find myself using the ScanTennas more than any others.

We've been looking for years, of course. Spying on Iraq top to bottom,
from the skies, from space, from the ground, with machines and with
humans.

We have looked and looked and looked - for years.

Nada.

the coalition
> didn't send in armies of weapons inspectors, and that wasn't their primary
> objective.

Sent in highly trained teams of experts with super high tech devices.
First thing. Real high priority. Been to lots of sites now. Nada.

How many years AFTER WWII were the atrocities of the Nazis still
> being discovered? And what makes you so certain that Iraq DIDN'T move WMDs
> to Syria? Doesn't fit into your little world?

We have drones and spy satellites watching folks going to Syria.

But I suppose it is possible Iraq sent a bunch of Giant Spiders from
Mars to Syria while we weren't looking.

Let's look at how logical your theory is though - Iraq builds weapons -
then when it's attacked it either buries them - so that they can't be
used - or moves them to another country - so that they couldn't use
them.

That makes a lot of sense. Build weapons - so you can bury them or throw
them away.

Right.

And again - false. We have looked for years. We have had many months to
tell the UN inspectors where they are. We have amazing spy technology to
see the damned things. Nada. We have agents on the ground who hate
Saddam - never a clue as to where even ONE wmd might be.

We sent in teams FIRST THING with super high tech devices, armed with
our best intelligence gleaned over the years. Nope.

We have captured folks who absolutely know about this - top official for
weapons. Has every reason to say what US wants. Says - we destroyed
them.

Top bio folk - we destroyed them.

We have rewards out now - with Saddam gone - Iraqis who drove trucks to
hide the things? Don't seem to like money.

We're just
> now back-tracking and cleaning up cities that were by-passed to get to major

And your theory is - Iraq made weapons - so that when attacked they
could bury them where they couldn't be used?

Why exactly do we have to wait to laugh in your face at such an
OBVIOUSLY STUPID idea?

General Franks

Why not make the analogy a better fit?

You claim that Iraq made these weapons so that when attacked - they
could bury them and never use them.

Right?

Is that your final answer?

In addition, the US has been searching for years with high tech stuff in
the sky and on the ground, with informants who hate Saddam. Never found
even one WMD.

We had inspectors in there, from the UN, for months - never found one,
even though they were free to go anywhere in the country, look behind
any door.

And moving the stuff - would still leave detectable residues which
inspectors, with high tech stuff, could spot.

The evidence for the existence of WMD is just about zero.

AND we can't find even one, even after years of looking.

AND the very idea that they would make them - and then HIDE THEM WHEN
ATTACKED is completely stupid.

>
> Everyone knows that the French are the most arrogant people on earth.
> However, no one knows why.

So true. The quality of life in Paris certainly can't match that in
Cleveland.

Just look at the two cities - it's obvious that American culture is
right up there.

France is beautiful. They do not have a nation consisting mainly of ugly
strip malls with boring and banal franchised stores selling inferior
goods.

So they have a right to feel superior to us - because they ARE superior
to us.

It's an obvious fact - just drive around the two countries for a while
and you will see that I am correct.

Of course, a comparison to the really ugly and really embarrassingly
banal USA is not a fair comparison - we are pretty much at the bottom of
the barrel among nations. Were you to say that the French had no right
to feel superior to the Italians - well, you might have a point.

But it is genuinely funny that Americans view themselves as somehow
superior - given what obvious low lifers we are. We are basically a
nation of Bufort T Hayseeds. With a few exceptions in PARTS of New York,
San Francisco, Vermont, and so on. I mean look - we have a President
who can't even speak correctly, and who is so stupid he launches
unprovoked wars against defenseless nations - causing the whole world to
hate us.

They have every right to feel superior - they really do. I love many
aspects of America - but I have to admit - we are pretty much all bozos
on this bus.

Salve,
un po' di tempo fa avevo un AR8000 che poi decisi di vendere dopo averlo consumato un po' tanto :-) Essendomi
tornata la voglia di un ricevitore ho cominciato a cercare in giro per i negozi e su internet apparati tipo AR8000 o
AR8200 e ho scoperto che sono introvabili e sono abbastanza rari. Ora le mie domande sono:

Chi distribuisce questi ricevitori in Italia?
Come mai non si trovano da nessuna parte?

Mi sfugge qualcosa che dovrei sapere su questi apparati o marca?
Ciao e grazie per una eventuale risposta.

What was, "our last beat" should have been "our last beta." Living
with dyslexia can make for an interesting time. <vbg>

I often get "sue" and "use" interchanged, sometimes with alarming
results. Until someone comes up with a dyslexic's spell checker I am
stuck with transpositions.

3278. Scantenna ST2: Another Few Questions On

Newsgroup: rec.radio.scanner
Date: 2003-04-20 15:17:27 UTC
From: Robert11 <rgsrose@tiac.net>
Message-ID: <b7udmbsor1@slb3.atl.mindspring.net>
Source record: 32294

Hello:

Looks like I'll be purchasing the Antennacraft Scantenna ST2

a. A bit confused over coverage though.

Their specs imply that it has "continuous" coverage from 30MHz to 1.3 GHz.

But, on one of their distributors web pages, it lists the coverage
as being in discrete frequency range blocks from:

"Frequency Range:30-50, 148-174, 450-470, 470-512, 800-1300"

Also:

b. Am going to have a hard time sneaking it in my attic, Apparently, it
has an 8-1/2 feet vertical height length.

If I cut, e.g., an inch or two off the vertical element(s), what is
effected? (coverage, gain, etc.?)
Is this a reasonable practical approach; looks like I need another few
inches shorter, even if I place it directly under the attic's peak.
Or, shouldn't I even think about doing this?

c. Is this antenna truly omni-directional?

Thanks,
Bob

Here we go - do you have a link or something to back this up? And I don't
mean some conspiracy-nut page...?

> We have captured folks who absolutely know about this - top official for
> weapons. Has every reason to say what US wants. Says - we destroyed
> them.

Why would they have every reason? The dissidents from Iraq that have been on
the news and stated that Iraq HAS such things are summarily dismissed by you
folks. Sure - they can't point them to where things are NOW, as they've been
gone awhile.

> Top bio folk - we destroyed them.

And they would tell the truth, like Baghdad Bob. Gimme a break...

> We have rewards out now - with Saddam gone - Iraqis who drove trucks to
> hide the things? Don't seem to like money.

Actually, most of them don't WANT money, and I'm sure some are still worried
about the status of hussein and his henchmen. You don't live in fear for
your life (and that of your family) for DECADES and just forget about it
overnight. Talk to some of the people who survived Hitler's regime. Many
still have nightmares to this day.

<sigh>

What makes you think they would use them in a war with the US? And, as I asked before, if YOU were forced into military service, then given orders to use chem/bio weapons - IN YOUR OWN COUNTRY - are you going to tell me you would follow those orders? They wouldn't even use their CONVENTIONAL weapons in many cases - they just played french - dropped their weapons, took off their uniforms, and hauled ass. Use your head.

> any door.

Look, Mr. Rocketscientist...if it were THAT easy, there wouldn't be any terrorists, either. Nobody has enough satellites to cover every inch of the world every second of the day in realtime. The terrorists have known this for years, and hide when satellites go by. The Russians did it with their military installations - especially the ones they didn't want anybody to know about. Satellite antennae have been listening to the cosmos for years - but are you going to tell us that because we haven't found anything yet that we are the only intelligent life in teh universe?

> AND we can't find even one, even after years of looking.

Who is this "WE"? Why do you turn a blind eye to the fact that hussein has done his damnest to obstruct the inspections? There's plenty of info on the net and elsewhere regarding that.

> AND the very idea that they would make them - and then HIDE THEM WHEN
> ATTACKED is completely stupid.

You are hopeless.

Well Bob for it to work right you can't cut just one end, i.e. you will
have to trim 1" off each end to keep it in faze. And yes it is continuous
coverage from 30MHz to 1.3GHz and last, yes it truly is omni directional.
And the best deal on the net is

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3018802735&category=4672

$40.00 free shipping from Antenna Warehouse on eBay :-) they have a better
deal on eBay then on there web-page, i.e. it's $37.00 + $10.00 shipping on
there web-page, on eBay it's a flat $40.00 with shopping.

I found the info below on the linksys web site. I recently saw a table that displayed the low, center, and high frequency for each channel. I can't remember if I saw that online or in one of my magazines. It's possible that table had nothing to do with Linksys. I'll let you know if I find it.

Linksys Knowledge Base Article ID: KB10934215

Instant Wireless equipment uses DSSS [Direct Sequence Spread Spectrum] technology. In North America, 11 channels are available. The breakdown of the frequencies is as follows:

Channel 1 - 2.412GHz
Channel 2 - 2.417GHz
Channel 3 - 2.422GHz
Channel 4 - 2.427GHz
Channel 5 - 2.432GHz
Channel 6 - 2.437GHz
Channel 7 - 2.442GHz
Channel 8 - 2.447GHz
Channel 9 - 2.452GHz
Channel 10 - 2.457GHz
Channel 11 - 2.462GHz

As you are so enamoured with the French, drop me a private e-mail and I will buy you a one-way ticket to France. You need only sign a contract that states should you ever return to the US, you will pay me $10,000.

As you would never want to return to such a crappy, inferior country this should be no problem for you.

Put up or shut up!

The Secretary of State in Michigan would be happy to run this plate for
him. He just needs to stop into one with the appropriate fee. They'll mail
him the results in 10 days or so, as well as mail his info to the owner of
the plate. Since it's just for curiosity reasons, whats the harm right??

No harm, unless the 'curious one' is a serial killer or rapist looking for the address and other information about a potential victim who happened to catch his eye.

There are many other reasons.

I really didn't think that the information I provided to a government agency would ever become a commodity, but perhaps you're right...we're not a free people who allow our government to perform its tasks with minimal impact upon our civil liberties, no, we're sheep paying handsomely for the privilege of being sheared.

He is making sense, Q. This isn't about watching the whole world - we have concentrated much effort and equipment on this one country for many years. It also isn't about hiding stuff while satellites go by - most spy satellites today are geo-stationary.

And the United States does have high-tech equipment on both aircraft and satellites to detect nuclear material. We've seen reports of such technology in magazines, newspapers, and other media (NEST, which uses such technology, has been well covered in many media outlets - and the military certainly has additional capability).

Even without such technology, it would be difficult to keep this stuff entirely secret, especially over time (the same with chemical and biological materials). For example, one way to locate this stuff is to simply follow the people involved - Iraq's scientists. These guys have to work on this stuff somewhere. You could also watch recent graduates from universities (those with such skills will be employed somewhere).

The ingredients and machinery to make up these materials have to be purchased somewhere, and shipped to where they can be used. With spy satellites, it shouldn't be too difficult to follow these shipments (if it is, we need better spy satellites).

Nuclear material is especially difficult to hide. It stands out like a sore thumb on most infrared film, even when located inside a building.

> (snip) ...and hide when satellites go by. The Russians
> did it with their military installations - especially
> the ones they didn't want anybody to know about. (snip)

In the early sixties perhaps. Satellite technology has advanced since then. After those original satellites, both countries used a series of satellites to keep a near constant watch over a region. Today, most spy satellites are geo-stationary - watching 24 hrs a day. Several are sitting over your house, watching at this very moment.

Bzzzzt!

... AFAIK, the only geostationary "spy" satellites are the comm relays and *possibly* the ferrets. The others are low orbiting polar jobbers.

...there are some *very* creative ways of getting nuclear materiel, especially if you are an "educational" institute.

Even so, granite will have a higher background level than a properly shielded vault, so a background level within a processing plant may in fact be lower than that of a city street. Weird but true.

The hardest part is getting the material. Tritium would be really hard. But fissionable material, not so hard. I guarantee you that you have some high-grade material in your home right now. The tools to work it, however, can be built or bought anywhere.

Just because it was hard work to do it the first time doesn't make it hard work today. Child's play? No, but not the proverbial rocket science either.

I know of a case where a law enforcement employee *was* charging hefty fees to 'erase' criminal database information, and for other unique services, but she *was* caught pretty swiftly and yes, she got a healthy prison sentence for it.

On the other hand, I've worked more than a few homicides where 'Restraining Orders' and other official impedimenta meant little to a determined lawbreaker. But, that goes with the territory.

>Criminals would probably just ask someone via usenet ;)

LOL...yes, that's as good a way as any, I guess.

That was certainly true years ago, but I was under the impression we had more geostationary satellites up now (at least that is the impression I get when reading about this). Of course, since spy satellite capability is probably one of the military's best kept secrets, there is no way to know for sure. In other words, your guess is as good as mine.

> ...there are some *very* creative ways of getting

The stuff to enrich into weapons grade material and the volume necessary to do so? I doubt it, at lease not without attracting a lot of attention.

> The hardest part is getting the material. Tritium would

Again, in the volume necessary to produce weapons grade material? I don't think so. If that were the case, every country would have nuclear weapons and the nuclear countries would not be working so hard to prevent the sales of materials and machinery to build nuclear weapons.

He's right about the geostationary spy satellites being comm relays.
This is because the geostationary orbit is above the equator. Not much
use for other "spy" applications unless you want to take a bunch of
pictures of Uganda.

Spy satellites for taking pictures tend to be low orbitters, as Eric
said. The people have this idea of the CIA launching a satellite to
hover over Iceland or wherever, but that just isn't the case. A number
of nations are located such that you cannot get a geosynchronous
satellite directly over them (Iceland, for example, is too far north).
There is also the fact that the geosynchronous orbit is over 22,000
miles above the surface of the earth. Not exactly ideal for taking pics
of the terrorists in Crapistan.

You seem to be forgetting that materials alone do not allow a state to
construct nuclear weapons. They also have to have the knowledge. The
group of scientists who have this knowledge is rather small, which is
one reason why the Nuclear Club is such an exclusive one. If I dropped
an ACME Do-It-Yourself Nuclear Bomb Kit on Barbados today, do you really
think they could just whip up a weapon?

Hi,

I have an AOR DA3000 discone which covers 25 MHz to 2 GHz.

Can someone recommend a good pre-amp (I'm willing to spend several hundred dollars) that work over this freq range.

If a pre-amp covers from 500 MHz to 1.5 GHz (for instance) then will it attenuate outside that band, or will the signals appear as if there was no pre-amp?

Thanks,
John

From: Jim Cassidy <jimcassidy@wi.rr.com>
Message-ID: <XaWoa.18027$Yj2.419137@twister.rdc-kc.rr.com>
Source record: 32330

A TAC channel is just a second channel that they use rather than the dispatch channel. It is a second feq our talkgourp ID. They use it to talk between themselves as not to tie up the dispatch channel. It's not secret or hidden.

You should be able to find the local TAC channels in your area from the same place you found the main channels.

Good luck,

Jim

You should check the FCC database of your town at

http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts

Pay close attention to the service code of PW. Also the TAC channel might
be a
repeater out put frequency, but at at low power.

Absolutely! However, I felt it more important (from the perspective of
scanning enthusiasts), to address the assertion that the OC trunked
system was 'not' being used for County EMS traffic.

Just received an order from Hosfelt Electronics (888-264-6464). I've bought from them for years. Small parts (walwarts, dc coax
connectors, wire, solder, transistors etc.). But the last two orders have been incomplete due to sold out or discontinued items.
Their service is great, you can order a $ .50 item, they have no minimum. Shipping is reasonable ... but they have less and less of
what I want, hence, who else sells small electronic hobbyist parts with NO MINIMUM, reasonable shipping and good service (prefer
they have a catalog)?

> soooo smart. He could solve all our problems worldwide, take care of all of
> us. We would feel so good and safe and live happily everafter.

No one can predict the future very well, so even the best among us can't assure a smooth ride.

But for god's sake - I sure could do better than President Bush - which is admittedly faint self-praise.

He has destroyed the government's finances. Each new estimate comes in far worse than the previous one. Did you see the latest? That in the FIRST SIX MONTHS of this fiscal year - we're already about 250 billion in the hole? And that doesn't even carve out the SS trust fund surplus - set it aside and it's 350 billion or so? In SIX MONTHS!

And the numbers are going to just keep getting worse.

Because President Bush lies about the real costs of his proposals. Take the war in Iraq - in December, to get congressional support and to make believe that we can afford his boondoggles, he said it might cost 50 to sixty billion a year. Guess what? He has asked for 75 billion - for the FIRST SIX MONTHS. He lied through his teeth - as usual.

Well, you know the score - from four straight years of surplusses - he took us right into the ditch.

Or how about this war? He said we had to go - for our safety. What total crap. Iraq is a total weakling. Boxed in by US and UK planes so that they couldn't even put soldiers outside of the Bagdad area. And the WMD? Nukes? Proven lies. Others - well, terrorists can get them anywhere. Attacking Iraq doesn't stop them. PLUS - Iraq doesn't even seem to have any of these readily-available things.

So it was a BRAIN DEAD war.

Now - you don't have to be a rocket scientist to understand that.

The costs are apparent - world hates us, arabs furious - which will likely lead to more terrorists, deficts worse, alliances damaged, fundamentalists strengthened.

Now - what do we gain from the war? Freedom - from a few dilapidated tanks which never were a risk.

So what can I say except - it's not that I'm so smart. All this is
obvious. It's that President Bush is really stupid.

He can't even speak English without constant blunders.

So you are confused - it's not that I say I'm smart.

It's that I say Bush is a moron.

And the facts back me up in spades.

In an amazingly short time President bush has completely wrecked the
government

Too many depend on me here.

Otherwise I would move to Costa Rica. ANd not because I don't like America. Parts of America are grand. But other places are sometimes even better. France, for instance, is wonderful. Go there. Hang out. It's a country both beautiful and really dedicated to falling in love. A wonderful combo.

I mean - America's fine. But it certainly isn't the best country in the world. This story we tell ourselves is nonsense. I mean - we have a big economy. We are wonderfully generous on an individual level. Parts of the natural appearance of America are gorgeous - like Monument Valley. Very interesting place.

But we're not number one.

For instance, we're constantly launching wars - sort of a bad trait, actually. The Viet Nam war - was evil. We tend to do that sort of thing from time to time. Like - 130 times since 1890 someone said - and posted the list. Nice big dog - who sometimes shits in the living room - not the very best dog.

Sorry to be the one to break that news to you.

Being number 23 or 37 or whatever we are is not really all that bad if you think about it. But this America worship, as if we were God Himself - is silly - and stupid.

You like Wal-marts sprouting up all over?

Fine. That sort of proves my point.

America is fine - but it's not number one. To think otherwise simply
means that you don't know what you're talking about.

And the French do happen to be superior to us. It's just a fact. Why
deny it? Drive around France. Then drive around the US.

Be honest at the end of it.

But again - Americans are fine. Standard poodles are the best dogs - but
that doesn't mean that Golden Retrievers aren't great too.

We don't really have to be number one. IT's ok that some other people
are superiour to us.

Really.

Why does it bug you to face the obvious reality that Americans are sort
of primitive in some ways?

PRetty good - but not at the top of the cultural scale?

Why does that bug you? THat fact?

I don't want to live in France because there are things I value more
than culture - which is to say - nature. And because I have skills which
allow me to work an hour a day and live happily in the US - but for
which there is little market elsewhere.

But Costa Rica, oddly, needs what I do. And I here it's pretty grand.

I don't look into moving there - though I hear it's beautiful and
cultured. - because family members depend on me here, and until they die
off - which might take another five or ten years - I'll postpone
checking it out.

But it's a big wide world out there - check it out. You might be
surprised at what you find.

America - number 23! It's not all that bad.

This odd desperation to be number one - is an odd sort of sickness. A trick of evolution, I suspect, which works for the species - but which screws up individuals.

Any way - the French ARE superior - they really are. It's a fact, and denying it is stupid.

Not that Americans aren't great!

> Very interesting place.

I find your emphasis on the importance of scenery and natural beauty
when such things are totally irrelevant to the quality of a nation. For
the sake of discussion, let's pretend that Ireland is a better country
than Yemen. If the two countries were to switch places (i.e. all the
people, government, and institutions of one country are moved to within
the borders of the other), would the quality of Ireland go down by the
same factor that the quality of Yemen went up? Of course not. The
country is the people and its institutions, not its land.

> But we're not number one.

Since there is no objective measure of the quality of a nation, your
statement is nonsense.

> For instance, we're constantly launching wars - sort of a bad trait,
> actually.

That would depend on the purpose of the war. War is not de facto bad.

The same could be said of any number of states. For example, look into
the actions of your French buddies in Africa.

> Sorry to be the one to break that news to you.

What news?

> Being number 23 or 37 or whatever we are is not really all that bad if

It is really going to twist your nickers, when in spite of your protestations, he is re-elected.

Beyond all your smoke and distortions, bottom line is:
Clinton was a scumbag, Gore lost, you lost.
Keep spouting like this for the DNC and you will surely lose again.
Their current politicizing tactic of obstruction, distortions and criticism
is doomed to fail.

Hell, Slick Willy was re-elected.. and he was a proven pervert and immoral twit.. it would not surprise me in the least if Bubya were re-elected. For one thing, Americans are too lazy to get out and vote. What was the percentage in the last election? Something like 40%???

3340. Best car scanner for driving

Newsgroup: rec.radio.scanner
Date: 2003-04-22 00:19:07 UTC
From: Philip Verdieck <philipv@hal-pc.org>
Message-ID: <3ea48a19$0$1974$a726171b@news.hal-pc.org>
Source record: 32356

I recently purchased my 1st scanner. It is a Bearcat BC350A.

I got it to have a scanner for a trip that involved fast driving.

I was wondering

1) Is this a good model, or should I get something else
2) Is it not worth spending much because all police will be going
digital encryption soon
3) What is available that has good size for an car (standard DIN?)
4) Does it piss off a cop to see a scanner in your car?
5) What is the best antenna mounting options for a car? Attempt to
connect to existing? Install another motorized?
Thanks.

I have read a couple FAQs, but found nothing specific to this, and I
also searched the messages, but only
found a couple people selling their BC350As, which makes me think it
isn't all too hot, but what do you expect from
Walmart for 100.00. I love its size though, since my car (94 RX-7) has
a concealed storage bin, that will fit this model with only minor
modification

Try Dan's. He has a lot of odd parts not found at Hosfelt, Mouser, etc.
Much of his stock might be considered obsolete except when you really
need it!

On the contrary - it was one of the highest turnouts in recent history. The reason Slick Willy served two terms was because of low voter turnout - I wasn't too enthralled with Dole, but he would have been the lesser of two evils, and would have surrounded himself with qualified individuals, instead of the fruitcakes that Willy called his "staff", and with no viable third-party candidate, there was no point in just pissing away a vote. Many didn't show for that election for the same reason - lack of interest. On the other hand, there was allot more interest in the LAST election.

And don't start crying about Florida - if you know anything about how the electoral college works and why it exists, you know why the election went the way it did.

There's always Digi-Key (http://www.digikey.com)

No minimum, but they'll hit you for an extra $5.00 on orders
less than $25.00. For me, it's never a problem finding
enough stuff to put on the order to get over the $25 mark ;-)

The biggest problem with it, it doesn't cover the 800 MHz band. Most of the cops live there today.

On the otherhand it is a great scanner for the airband and is the best one I have found for copying digital aircraft signals without a discriminator tap.

Good place to get your feet wet, just don't depend on it for your initially stated purpose.

Probably more like thirty percent when you eliminate all the Democrats that voted multiple times.

On the other hand, we have states like Illinois, that feature resurrection of the dead to increase participation.

My boss brought in an old Radio Shack Pro -xx before i quit my last job and would let him pick up cell phones, and he said he did not have to modify it, i was wondering if you guys could help me find the model, and if you can't what is a good hand held scanner that will pick up cell phone freqs withouth having to be modified. I found a good Radio Shack Pro -64 on ebay, but I have to modify it. Thanks
John

And if that doesn't work, you can always appeal to the US
Supreme Court. LOL!

He is good because he stocks the sorts of things that people building
radio stuff would want, saving someone from ordering (with minimum
orders) toroids from here, and variable capacitors from there, and
semiconductors from a third source. For a lot of simple things, one
can get everything from one source.

Of course, it is a limited stock. So you won't get the latest
ICs, won't even get more than the most popular ICs. And it's not
a general supplier, so I'm not sure it's the place to get power
transformers.

I've bought from him, and one of these days I will get around
to ordering again.

3356. Re: Need help with Pro-25 Scanner

Newsgroup: rec.radio.scanner
Date: 2003-04-22 05:56:26 UTC
From: Emilio Goldstein <egoldstein@sofa.net>
Message-ID: <eQ4pa.481$gM2.130@newssvr19.news.prodigy.com>
Source record: 32199
Cross-posted to: alt.radio.scanner,rec.radio.scanner

In most parts of the country, frequencies expire after a set period of time (depending on the wavelength). Frequencies that you may be using go out of circulation, and become inactive, until they are reninitialized by the FCC on your area frequency grid. The PRO25 is pretty smart for a low end scanner. It will keep track of which frequencies have gone dormant, and which are "brought up".

It's actally a pretty smart system. By stopping cars, a traffic light eventually allows all cars to eventually go through the intersection. Similarly, by rotating frequencies, more radio traffic is eventually facilitated.

Hats off to you for noticing what is going on!

> Does it piss off a cop to see a scanner in your car?

No, but since it is illegal in many (most?) states to have a scanner in your vehicle (attached to in some states) unless you are a ham or public service volunteer/employee (fire, ems, police, etc) it will likely get confiscated if you are caught with it - expecially if you were speeding at the time. Using a scanner during the commission of a crime (speeding) is a pretty tough charge in some states.

Not all of them. 802.11a runs in the 5GHz range, IIRC. 802.11a and g are
the 2.4GHz solutions.

MM,

"You mean the US Supreme Court is part of the electoral college?"

NO - The Florida and US Supreme Courts are not part of the Electoral College; but they are 'By Law' the "Arbiters" of the 'electoral process'. Remember 'under the law' the Final Arbitrator of the Election and the Electoral College Process is (was) the 'elected representatives of the people "The US Congress". The US Congress 'Accepted' the Results of the Election and that in itself made the Election Legal and GW Bush the Legitimate President of the US(A).

For sale...

Uniden BC 250D Apco P-25 Digital Police Scanner with Apco P-25 Card
Monitors Apco P-25 conventional, trunked 3600 & mixed mode,
Digital communications.
The unit is only 1 1/2 months old and is in mint condition.
Unit works great. I need to sell it because the agencies in my area went to
a different system.
Comes with all the original paperwork, box, battery pack & charger.
I will not split up the card and scanner.
I paid $650.00 and must take the loss and sell it as used at $500.00
So if are looking for one of these, here is a chance to get it at a great
price.
you can check my feedback on Ebay user rating tramd300@aol.com
use this link for a picture of unit
http://members.aol.com/TRAMD300/BC250Scanner.jpg
And use this link for the specifications of the unit
http://www.snowcrest.net/marnells/factsheet.htm
You get this all for $500.00 shipped in the USA only.
I will accept postal money orders only or if you wish to use Pay-Pal.
Price is firm...
Please email me direct for more info.
I check my mail every day.
Thank you...

Truth is that you will only be able to hear the old analog phones. You will not be able to hear any of the digital phones that have been common for a few years now. With many people throwing away their phones after a year to get the best deal on a new contract, how many analog phones are actually left to listen to?

I recently downloaded the win95 software for programing my Radio
Shack Pro-95 scanner and thank all for pointing me towards that software.
It works GREAT.

Since I have been mostly out of scanning since the Seattle PD went
to a trunked system, I am very new to trunking systems. Is there a site on
the net or a publication for newbies that explains how to program trunking
frequencies, and how to assign "tags" and for that matter what tags are.

It would be nice if there was a book, "scanning trunked systems
for dummies". Thanks in advanced for your help. So far I am very pleased
with the Radioshack pro-95.

If you have that amount to spend on your listening then go for a good
antenna instead of a wide band pre-amp.

I would recommend you go for a wide band, 'Log Periodic', say one that
covers the frequency range of, 100MHz to around 1.5GHz.
If you have a certain band that you listen to then by all means get a
pre-amp, but make sure it is low noise and only covers the frequencies of
interest John.

remember, more gain = more noise. Much better to put your money into the ant
system (good ant,
low noise pre-amp and most important LOW LOSS coax).
One last thing John, start with a good RX !!.....cheers, Ken, G4KIR.

Outgoing mail is certified Virus Free.
Checked by AVG anti-virus system (http://www.grisoft.com).

Miss her!!!!,
I sure would not miss mine :-).....especially if I had a grenade launcher,
the only thing I do not like about my radios and scanners is they can't
bloody cook or clean, Still you can't have it all.

Sounds just like the Michigan scanner law... Only applies to Michigan, however...

We just happen to be one of those FEW states. We also happen to be the one with the worst law in the books with regard to their use in a motor vehicle...

Would somebody please tell me what this war was all about? Does anyone know?

So, a retired general is supposed to put Iraq back together again. We'll see. Iraq is not Japan and whatsisname is not MacArthur. We had a highly touted retired US general come to Kosovo to take over the much troubled nothern part of the province, Mitrovica, where the Serbs, under the disinterested eyes of the Fremch who had that part of the provinmce as their peace-keeping responsibility, were (an are) making big trouble. He lasted about a month. Then there was the Danish former minister of defense who took over from the one really effective administrator, Special Represntative of the Secretary General Dr. Bernard Kushner, who lasted less than a year. Iraq isn't Kosovo either. It will be interesting. But why did we smash up the place in the first place? You and I will pay to put it back together.

I have 2 new Metz scanner antennas for sale.
http://www.metzcommunication.com/scanner.htm

They have a bracket mount instead of a mag mount.

Key Features Stainless Steel 17-7ph Whip
Stainless Steel Housing
Gold plated support
UV resistant Cap
All connections soldered
Compression Whip retainer
8 oz total weight
Coax Connector
Lifetime Warranty on antenna coil

Technical Specifications
Frequency Range - 30-512 Mhz
Whip length 34 inches

I will sell each for the best offer or you can buy both of them.

I also have 2 new marine band VHF whips only.

I am located in Oswego, Il.

Please email me at antenna@mikebentley.com

From: RedXIII <x@x.com>
Message-ID: <XiGdnQpVrN5FVTijXTWcpw@comcast.com>
Source record: 32202

So this asshole cop pulls me over today and starts asking me why I have a scanner in my car. I tell him it's a hobby and that NJ state scanner law states that having a scanner in your vehicle is not illegal unless it's used for commiting a crime or evading police. Which is true. It's says so right here:

http://www.siscanner.8m.com/laws.html

and here:

http://www.maxpages.com/frequencies/NJ_Laws

and here:

http://www.fordyce.org/scanning/scanning_info/nj-laws.html

That wasn't good enough for that asshole, so after he writes me for not having a seat belt on, he tells me that the "NJ scanner law stuff is hogwash" and that unless I'm a tow truck driver, EMT, fire fighter....(insert own bullshit) that I can't have it in my car and that he has 30 days to decide if he wants to charge me with the crime of having it in my car.

What should I do? I know for a fact that it's not illegal and this asshole harrassed me just cuz he was bored i suppose.

> here:

From looking at it, it may be true that the laws in NJ don't clearly and
distinctly prohibit the possession of a scanner, unless
that scanner is used in the committing of a crime, but best to look for the
most up to date version of NJ laws as laws
change and one of the pages is dated 1995.

> That wasn't good enough for that asshole, so after he writes me for not
> having a seat belt on,

he gotcha there. Bad Boy, bad boy, watcha' gonna do when they come for you.

he tells me that the "NJ scanner law stuff is

> fighter....(insert own bullshit) that I can't have it in my car and that
he
> has 30 days to decide if he wants to charge me with the crime of having it
> in my car.

Then I would seek legal advice. Don't try to do that on your own. There's no
crime for actually having it unless you
commit a crime.

> What should I do? I know for a fact that it's not illegal and this
asshole
> harrassed me just cuz he was bored i suppose.

Legal advice. Don't try to play TV lawyer. Best thing to do is wait to see
if he does something. But I'll bet he was just
talking to get you rattled. He pulled you over because you weren't wearing
your seat belt. I'd be surpised if he even
remembers you on his next shift. He'll remember that box of hot and tasty
Krispy Kremes before he remembers you ;-)

You were polite and respectful to the flat foot er I mean officer, right?

> --

<g> I do, well I did write a lot in assembler back in the dos days,
and also C can get quite interesting some times.

OK, back to deebee...

Thanks for trying it, any thoughts, likes, dislikes, suggestions?? The
idea of beta is to test final operability but also give others a
chance to look at it and comment.

Is it usefull? We may never get to final if no-one thinks they can use
it. <g>

You think you have rights but you don't, only if they are too busy picking
on others to mess with you.

Found out that a friend of mine at work is related to a member of the
Michigan State Police. I gave it to my friend, with the explanation of the
need, and he had his police friend run it for me. Had I known this before
hand, I could have saved myself a lot of grief from the idiots in here...
Oh well, live and learn...

PH

Thanks for your insight. I need an omni because I have to
simultaneously receive signals from all directions.

I'm using LMR-600 coax.

I still need a pre-amp. Do you know of one that covers 25 Mhz to 2
GHz?

Thanks,
John

Dan, why worry about your cable ISP? Do what I did when I was posting to the NG news.admin.net-abuse.email some yrs back. I picked up an extra account for $9.99 a month, some ISP's had free ones yrs ago if you used their branded browser, limited hrs per month maybe but who cares.

I knew I'd be pissing off spammers whose accounts I was trying to get canceled for spamming and I was actively breaking into their servers and screwing with their web sites to create any problems could for them.

Didn't give a rats ass if they got one of my accounts canceled! Ditto the current one. I use cable for the legit stuff, modem for other things. Cancel my dial-up account, I simply get another dial-up because there are so many of them available, it's that simple. Do the same Dan. Get a cheap dial up to post ads. There ain't nothin' the whiners can do at that point to your current Time Warner Cable account, it can be used for anything but online auctions directly.

Continue posting ads for EBay or personal sales, let the whiners complain, usually dial-up ISP's are hands off on complaints unless they can be proven to be legit. Cable companies seem much more touchy about complaints.

Does New Jersey define a traffic violation as a crime? If so, even a seat belt violation could be covered in the legislation you quote. Section 2C:33-22 is perhaps the most relevant because it doesn't require the actual use of a scanner - only possession while in the course of committing or attempting to commit a crime.

Depends on where you live. In my area, the cellular band is full of analog
phone conversations, with very few digital phone conversations.

I might add, that if you have an ham license, you are technically covered in this matter, but I wanted an extra mesure of security and applied and recieved the scanner permit. It actually was fairly easy to get.

In the narrative section as to why you want the permit in the first place, I stated something to the effect that I was deeply concerned that if I travel somewhere in Michigan, usually less populated, I might run into someone who is clearly not knowledge-able of ham radio, and a clear understanding of the law (listed below) I didn't want to go through a huge hassle to get my equipment back, which by law I had a right to possess under the terms of the law. And I got the permit!!!

For those that aren't hams (worth getting the license alone for those in Michigan) and also are not affiliated with a police or fire department agency, I don't know what the solution or justification could be..... Like I said, it's worth filling out the application (link listed below) anyways! :)

Now one question.... If YOU modify your scanner or have one that normally
does recieve those ranges, who the hell is gonna know what you are
listening to unless you go blabbing about it??? Or use the information
heard for personal gain??

Almost anything from the free world is sold without any blocks
in the scan range. It is only the americans that has all those stupid
blocks.

Freedom of speech, but only as long as nobody listens.

The fact that the cop gave himself 30 days to "go back to the station and pull the code book" should tell you something. If he knew it was illegal, he would have impounded it then and there. He just gave himself an out, that's all. He's ignorant of the law and THAT could be dangerous. I'd just make an entry in your OWN records of the incident (document everything) and keep it handy in case he tries something stupid.

Notes taken at the scene BY YOU have as much weight in court as Officer Nastie's.

Peter

3412. Antenna Coax Impedance Mis-Matches (for receiving antennas) Quest. ?

Newsgroup: rec.radio.scanner
Date: 2003-04-23 12:04:24 UTC
From: Robert11 <rgsrose@tiac.net>
Message-ID: <b85vge$r00$1@slb1.atl.mindspring.net>
Source record: 32226

Hello:

Will be purchasing a new Antennacraft Scantenna ST2 antenna for receiving 30 MHz to 1.3 GHz.

This antenna is quoted as having a 75 ohm output (comes with a 300 ohm to 75 ohm Balun, apparently).

Of course, my receiver only has a 50 ohm input for this range. (always something)
Let me ask my question two ways for clarity:

a. I already have a 50 ohm coax run from my attic (replacing a R/S Discone) to my receiver input which I
would like to utilize again, if practical.

Can someone please describe the effects of this mis-match, if I just plug the new 75 ohm antenna into this 50 ohm cable?
(about a 50 ft run) I do listening only)

b. If I do go to the trouble of running a new 75 ohm coax line from the new antenna to my receiver, what are the effects of using
this to the 50 ohm receiver input ? "Meaningful losses" ?

What's the best approach for me?

As always, much thanks for help,
Bob

> in my car.

Inquire with another police agency as to whether or not you can be charged with a "traffic violation" after the fact. You cold also as them what their take is on the scanner law if you like.

Generally an officer can't charge you with something later on, unless he wrote you up for it at the time you were pulled over. If he didn't give you any type of "ticket" for your scanner, I'd have to guess that you are free and clear of any charges. My best guess would be that he was just using a scare tactic on you to try to get you remove it from your vehicle... Apparently he has something against them...

Please note that the above is only an educated guess, and shouldn't be considered factual as I know nothing of the laws of your state...

Seems we have a newsgroup full of radio scanning lawyers.

Depending on what state you're in, laws change from state to state.
You can get a citation in the mail after the police let you go.

Had to tilt my 2035 overhead installation so's I could read it too. Plate has gotta be facing the eyes. Some have a polarity adjuster - I couldn't find one on the 2035, but I know they're out there.

Big mistake.

This is an Officer of the Law. As such, he and most cops feel they are
experts on the subject.

Had you simply said "really? I didn't know that - thanks for telling me!"
you probably wouldn't have even gotten the ticket, let alone the lecture on
the law.

> What should I do? I know for a fact that it's not illegal and this
asshole
> harrassed me just cuz he was bored i suppose.

No, he harrassed you because you came off like "I know the law and you're
just a dumb cop". If you had been the one to play dumb you'd be on your
merry way probably without the ticket. Trust me, I do it all the time.

The conversation usually goes like this. The cop says "that scanner's
illegal" and I say "really? I didn't know that. I just like to listen in -
it's so interesting. Say, were you working the other night when I heard..."
and I name something that is usually pretty funny, like someone sweeping
their driveway during a thunderstorm... in the nude. (You laugh but I really
heard that once). Many times I get to hear the parts of the story that
DIDN'T get broadcast over the air. The cop and I have a good laugh and guess
what? He says "Tell you what, I'll just let you go with a warning tonight.
Have a good evening."

Put it to you this way - I should have gotten about a dozen more speeding
tickets than I actually have over the years. Can you say the same?

Hi while looking through the local pawn shops I picked up a couple of items, one was a Radio Shack 2m Ham Antenna, but for mobile use, I got it for $5, and its just like the one they sell in Radio Shack. Can I modify or use it with my 2m base station? We have a local ham chat tonight so Im going to try it out. The other item I got was a BC350A for $15, just needed a power cord, which I had already at the house. Thanks for any advice and solutions. If I can't use the antenna I would be willing to trade it for a 2m base antenna, even if its a homebrew j-pole. Thanks

Well 1st off these add-ons are all junk, i.e. you have to yell at the phone
and the user on the other end sounds like crap on them! 2nd they only send
for about 2 feet so if your scanner could do FM you would not hear it.

I suppose it's a good excuse to shift to computer control. (Got the discriminator output jacked, but I haven't tried monitoring MDT traffic yet. Probably all encrypted by now, wah! Maybe they use double ROT-13 encryption?)

Didn't pick up anything movie related, although there was a damned strong carrier on one frequency. (Full squelch strong.) Gone now. Tomorrow's supposed to be their last day of shooting, so I'll give it another try. (Hmm, crash wrap party, it's a plan. ;^) (I just have this thing about female techies.)

Source record: 32154

Don't know what style of antenna it is, but if it is meant to go through a hole in the roof or a mount, just get a pizza pan or similar and drill a hole through the center for the antenna. If it's a mag-mount, stick it on top of a refrigerator or file cabinet. You can also make a ground plane out of 3 or 4 pieces of coat hanger wire 19" long. Attach them to the base of the antenna (where the coax attaches, not the antenna.) There are all kinds of solutions. Just remember that, if it didn't come with any kind of ground plane, and isn't a half-wave vertical, then you need something to give it a ground to work against. I have used mobile antennas of all kinds in the house since 2-meters became popular back in the late 50's and early 60's.

FWIW,

IMHO: Single Greatest Thing to Improve Voter Turn-Out would be to
Have NONE of the Above as a Choice. IF, "None of the Above" Got the
Most Votes: Then All of the Above Candidates could not run and the
Parties would have to come up with New Candidates to Stand for
Election.

GIVE THE VOTERS A REAL CHOICE: "NONE OF THE ABOVE" and they will Vote
!

Typical. If a cop doesn't like you, he'll find something to write you
up for.

A lot of people find themselves charged with disorderly conduct for
telling a cop, "I'm not doing anything wrong, and you've got no
business hasseling me". Vague, broadly defined charges, like
disorderly conduct allow, the cops to make the law as they go.

And sadly, the jury will vote for conviction.

>has 30 days to decide if he wants to charge me with the crime of having it

Learn from your experience.

On the street, you are at a serious disadvantage. Don't lecture cops
on the law. The less you say to them the better. Be wise to their
game of, "I'm going to take you to jail, unless you admit to something
I can take you to jail for". And most important, do whatever ass
kissing is necessary to end the confrontation as quickly as possible.

You can call his supervisor, but keep in mind, these people stand
behind each other, right or wrong.

Well, one can only make guess or speculate to the intent of the officer if
they don't know anything about the laws of the given state... I'm sure that
you couldn't have done much better unless you lived in or near the state in

question, or at least has some vague idea of the laws of the state.

You obviously mis understood what I was saying. What I meant was, that through my experience, I've never heard of an officer giving someone a traffic ticket after the stop has been completed; i.e., after both parties have departed from the stop. If you don't get the ticket for something on the spot, durring the stop, then they shouldn't be able to issue one "after the fact." Just doesn't sound right to me, nor have I ever heard of it happening.

> just a dumb cop".

No he harrassed me because he's an arrogant pig that thinks he's above the law, but I know the law and I called him on it. He can talk all the shit he want's but the law in New Jersey that made it illegal to have a scanner in your car was repealed in 1995 if not earlier. He's nothing but a goose stepping KKKop that will embarass himself if he fucks with me.

I like the idea in principle. You could however have a real
dilemna if "None of the Above" keeps winning (not to mention
the costs of reelections). In addition, it would be
interesting where the vote was close and seeing a candidate
appeal to the court for a recount -- we could have some real
fun with this.

Let's get down the real business Butt Breath.

Next time your rotten butt is in big trouble who the hell are you going to call?

Remember, your the one bashing the cops.

As far as morons go, your the one that brought this bull shit into this group
and wanted the readers to cry for you.

Stand up and at the least act like a man. Take you ticket and pay it, stop the
damn crying.

Ignorance of the law is no excuse.

There are times when this is neccessary, like if an officer tickets someone for speeding and NCIC is down or the driver's state DMV isn't responding, then after the stop, it's discovered the person is driving on a suspended license. You'd be a fool to believe that he wouldn't get a ticket in the mail and an invitation to meet the local jodge.

You've obviously never spent any time at all as a New Orleans police officer. The rank doesn't stand behind their troops, they stand *on top* of them, if it'll make points. There are exceptions, to be sure, but don't bank on it.

>Vague, broadly defined charges, like
>disorderly conduct allow, the cops to make the law as they go.

Yes, I can see a policeman in front of the screening unit at the District Attorney's Office 'making the law' while trying to arrange for the DA to prosecute the case. Yeah, right.

>Be wise to their
>game of, "I'm going to take you to jail, unless you admit to something

What is with you folks? Why all the animosity towards the police. They are enforcing YOUR laws. Then to state that people with just a high school education, all border on the illiterate level. is really supercilious.

I get really disgusted with people that make a mountain out of a molehill.

He did not have his seatbelt on, this started the chain of events. His obnoxious attitude pushed him down the slipper slope.

Next he comes in here with tears as big as horse turds rolling down both cheeks. A little consideration for a fellow human would have gone a long way towards preventing the problem.

He is a rectal orifice and getting exactly what he deserves. Your mileage may vary.

>happening.

It happens in Louisiana. As a matter of fact, I've issued 'after the fact' citations myself, not that I wanted to. This is usually done after a traffic accident, invariably with injury or substantial property damage.

The investigation is reviewed by higher authority and *usually* State Police officials, and it's not uncommon for an officer to be ordered to issue a citation when one wasn't issued at the time of the initial incident. Sometimes, individuals are hospitalized and it's not very nice to cite injured parties.

In other instances, facts come to light during the course of the investigation...witnesses sometimes come forward, or additional information or physical evidence is retrieved, that makes issuing a citation mandatory.

Yes, one can tell from your splendid usage of the English language that you've obviously earned your Ph.D. in some esoteric discipline.

As for your assertion that 'most cops have an education level of 12', that's untrue, and it has been for a number of years.

More and more departments require that *recruits* hold university degrees, just to get through the application process.

Of course, in tiny municipal or some county departments, the standards are invariably lower, but even then you might be surprised.

As for your recto-cranial inversion problem, I humbly suggest that you seek immediate professional assistance <g>.

> yet. Probably all encrypted by now, wah! Maybe they use double ROT-13
> encryption?)

Don't think so.

Some of us whose hobby is poking around the RF spectrum to explore what is out there have been trying to make this point about a number of widely used rf links for many many years. Nice to see the issue hit something a bit more mainstream.

Most of the MDTs used by police departments are not encrypted in any meaningful sense, all the complexity of their signal formats is there to provide error correction and detection and efficient use of the radio spectrum. VHF and UHF rf links to moving vehicles are prone to both high error rates and bursts of errors (fades) and both MDT and pager protocols were designed to use very heavy (rate 1/2 or more) forward error correction and interleaving to help cope with this. This and the synchronous transmission mode used to reduce overall bandwidth make MDT signals complex and non-standard by comparison with simple ASCII async start stop stuff.

And some of the providers were silly enough to sell customers on the "security" of their systems by trying to convince them that the error correcting, interleaved, randomized (scrambled, for better signal statistics, not security), signals were so complex that nobody would be able to figure them out.

But if you think that police MDTs running in the open are somewhat shocking, you should also realize that virtually all pager traffic, including email sent via pager systems, is also completely unencrypted and transmitted using protocols designed for robustness in high error environments rather than security. And software for monitoring pagers with a scanner has also been widely circulated around the net for several years. Included is the capability to target particular pagers or monitor everything on the channel and grep for interesting traffic.

And the Mobitex protocol used by ARDIS and RAM mobile for wireless email is another example of something that is complex for error correction and robustness but has essentially no security. And software for monitoring this circulates around the net as well. ARDIS does use XORing with a 32 bit constant of the day to provide some fig leaf of security, but obviously determining the constant is trivial...
And this only scratches the surface of what can be found out in the ether and intercepted with relatively simple gear and some software ingenuity...

Isn't that always the way? People violate the law and then get upset when the actually get a ticket for it. They're also the same people that complain when they feel the police take too long to get to them when the call.

While I generally agree with most everything you write, James, I have to go with the other party on this one, especially when it relates to the Michigan State police. On occasion, I personally believe that the MSP are worse criminals than the criminals themselves. If they can't pin something on you, they make up laws that don't exist, or they twist and contort the laws that do exist so they fit a situation, etc.

Case in Point:

Situation: Five (5) lane hi-way. (Two lanes each way with a turning lane in the middle), 55MPH zone. Evening hour, (it was dark out) on a stretch of hi-way with no lights of any kind (street lights, etc.). Person was heading West, officer heading East. Person not speeding, and was traveling in the outside (closest to the shoulder) lane. Officer whips around and pulls this person over. Goes through the usual routine of this and that. Person asks why they were pulled over. Officer refuses to answer the question. Officer takes the paper work bad to his vehicle and runs everything. Everything checks out, and he returns to the car. Person again asks why he was pulled over. Officer tells him he was pulled over because he "has a faulty left front tire".

Yup, that cop was able to tell that this person had a faulty front tire, in the dark, three lanes away from each other, and going in opposite directions, each at or near 55MPH... Son of a bitch must have infrared binocular vision, let me tell you! Nope, it was just another case of harassment by the MSP. They didn't have a real reason to pull this person over, so they made something up after the stop... A fairly common occurrence when it comes to them. Lying is a BIG part of their job apparently, as is harassment...

BTW, no, this "person" was not me. It was someone I know, however, I too have had my fair share of run-ins with these people. Corruption run rampant in the MSP!

They sound like they need some professional oversight. I was with the NOPD when they were the essence of corruption; they became the first (and I believe still the only) municipal police department in America to have an FBI Special Agent assigned full-time to the Public Integrity Division.

As for not having a 'real reason' for the stop, it was possible that the Officer might have been radioed a description of a wanted subject, and the person you mention, might have matched the description. But, the Officer should have had the professionalism to let the individual know that, before leaving, since apparently no arrest was made, or even a citation issued.

Then again, there are *far* too many screwballs running around with badges, most of them harmless, some of them a fatality looking for a scene.

>then some of the useless and completely rude comments others seem so eager
>to dish out. Really makes them look likes asses... :)

LOL...agreed! Some other poster mentioned communications system failures, and that, too, is a big problem. Criminal databases *do* fail, and often, especially when systems are down due to weekly NCIC 'purges', etc., and it's a pain to deal with, particularly if you're dealing with an obvious nutcase.

When I was an Officer, I always tried to err on the side of caution, not to mention 'common courtesy', and it usually paid dividends. Not always, of course <g>.

Most glaringly not on your list: Weapons of Mass Destruction and disarmament of Iraq. Because of course, there never were and are not now any WMDs.

Also not on your list: Ego. And the need to remove the yoke from the suffering Iraqi people. And if you believe that was a reason, I have a nice bridge for sale.

But actually, while all of the above is probably correct, none of these is reason enough for rational people. There is something truly evil going on here and it's not in the Axis of Evil..

So he didn't violate NJ law, and he "DIDN'T" get a ticket.

So what's the problem?

So he got stopped, drivers get stopped every day.
That tells me the police are doing what we pay them to do.

AMEN, and I hope he gets started soon.

Remember the famous PATCO strike where Ronald Reagan fired all the striking controllers? Well, most of the folks who came on board after that strike are nearing retirement. There is going to be a HUGE need for replacement air traffic controllers in the next several years. The opportunity for advancement is certainly there.

As one of the many pilots out there at the other end of the radar beam, I'd like to wish Kevin the best of luck and I hope he succeeds.

Come, come, you know the answer to that. You can't have the fox counting the chickens in the henhouse. It's very much in Bush's interest to 'find' weapons of mass destruction because that was the reason -- well, ok -- the main reason for invading Iraq. And to put the ugly truth simply, the UN is more trustworthy than the Bush administration.

> Does anyone know the trick to opening
> the scanner case on a scannocular?
>

Scannoculars are a nice inexpensive 800MHz-capable receiver
that can be used as the control channel receiver
with TRUNKER. (Why dedicate an expensive scanner?)

I picked mine up for $27CA on clearance at the Tillicum
London Drugs here in Victoria, BC on April 21. The advertised price
was $49, but if you ask, you can get them for less.

Here is the procedure for installing a discriminator tap
into a Scannoculars receiver.

Remove the screws holding the binoculars in place.
Set the binoculars aside.

Remove the battery door and batteries.
Remove the 4 screws holding the case together.

With the 4 screws removed, and the ring taken off the
BNC connector, you need to push in 4 release catches
as you prise the black shell and orange shell apart.

Start with the catch that is dead center at the
battery door end of the unit. With this one released
and the shell partly released, move to the releases
on the left and right sides which are exactly 4 cm
from the bottom corner on the bnc connector side and
4.5cm on the volume control side.

Finally, pop the catch which is dead center at the
top and it should open right up. There are no
wires connected to the black shell, so it can be
set aside easily.

The circuit board is copyright 1999 Uniden,
for those who want to know.

Remove the 3 screws indicated by arrows on the circuit board.

Gently pull away the top circuit board, being aware
that there is a 20 pin connector located in the
top corner nearest the volume control.

Turn the board over carefully so as not to damage
the power cable and note the black ooze covering
most of the interesting bits.

Between the 20 pin connector and the volume control
you will see IC2--a 16 pin surface mount IC labelled MC3361CD.

Checking my handy discriminator chip guide (courtesy Bill C.)
we find MC-3361 is a commonly used discriminator chip.
We want to tap Pin 9 for baseband audio.

Viewing the chip from above, look for a dot or line at
one end. Orient the chip so the dot/line is farthest
from you.

Pin 1 is just left of the dot/line in the corner position.
Count the pins off as you move counter-clockwise around the chip.

You will find Pin 9 in the corner diagonally opposite pin 1.

Follow the circuit board traces from Pin 9 and try to locate
a place away from critical components to place your tap.
Solder directly onto IC2 as a last resort.

If you look for TP6 there is a tiny dot of solder
a millimeter towards the battery compartment from it.
You should be able to follow the circuit tracing from
the solder point back to IC2 Pin 9 to confirm you
have the right location.
This is a good place to put the tap.

You will also need to find a nearby ground for
your shielded wire and figure out how to externalise
the connection given the limited space inside your scannoculars.

If anyone wants a photo of IC2 and TP6, just email me.

Can anyone give me a hint as to where the mobile data terminals receive? I have searched the 800 MHz band and I either do not recognize the signal or missed it. The system for normal communications is a Motorola Trunking System here in Beaufort, SC.

Thanks for any hints.

An airhead, yes. More precisely, he does not care about Iraq, Iraqi people,
the best interest of US, terrorists, compassion, WMDs etc. All he does care
about is finding a distorted way to discredit Bush. Purely a political
tactic. The DNC etal. is angry because Clinton was a scumbag, Gore lost,
they lost in Congress and they continue to lose power.

He also DIDN'T get a violation relating to the scanner laws. So that isn't the "whole" problem. Instead, he got a ticket for not wearing a seat belt, which is probably what he was pulled over for. While he was pulled over, the police officer asked about the scanner. After determining no scanner related violation existed, the officer let him go with just the seat belt violation. What is the problem with that?

What's the gripe? He didn't get a ticket for having a scanner. Instead, he got a ticket for not wearing a seat belt. While he was being ticketed for the seat belt violation, he was also questioned about the scanner. After the officer decided no scanner violation existed, the guy went on his way with just the seat belt ticket. I'm sorry, but I just don't see anything there to gripe about.

Really? So, when you or your family needs help, you believe it is better to call criminals than the Michigan State police? Unless you're a criminal yourself (afraid to call the police), I seriously doubt it.

> (snip) Yup, that cop was able to tell that this person
> had a faulty front tire, in the dark, three lanes away
> from each other, and going in opposite directions, each
> at or near 55MPH... (snip)

> (snip) Corruption run rampant in the MSP! (snip)

And that story is enough make you believe the Michigan State police are "worse criminals than the criminals themselves?" Either you have lived a very sheltered life or the criminals are really terrific in Michigan.

Your friend got pulled over because of some suspicion on the part of the officer (a drug neighborhood, thought speeding, vehicle similar to a wanted vehicle, erratic driving, or whatever). After your friend checked out okay, he was allowed to go on his way. Why slander the Michigan State police over such a minor incident?

> (snip) however, I too have had my fair share of run-ins
> with these people. (snip)

Ah, perhaps that explains it. And, since you didn't tell the story of your own run-ins with the Michigan State police, perhaps you were not as innocent as the friend in the story you did tell.

The KKKop didn't determine anything. He claimed that it was illegal to have a scanner in my car unless I was a tow truck driver, EMT, firefighter...etc. Then he threaten to charge me with a crime in the next 30 days, but only if he felt like it. Besides him being total wrong, what kind of bullshit is that?

Let me count the ways...

1. This government, not Saddam, controls that entire country.

2. Nobody is "interfering" with our "inspections" - the reason repeatedly offered to explain why the initial inspectors did not finding anything.

3. There are several hundred thousand soldiers, not just a few inspectors, roaming all over that country with orders to report anything suspicious they find. Darn little has been reported - certainly nothing to justify an invasion.

4. Unlike the initial inspectors, those soldiers have to ability to question anyone, kick down any door, search any person or vehicle, shoot anyone who resists, in the search for these weapons. Again, darn little has been found.

5. Our government claimed they "knew" about those weapons and justified an invasion of a country based on those claims.

6. More than a hundred of our young men and women, and god knows how many people in Iraq, died, with many more on both sides injured, maimed, or crippled, as a result of that invasion. Any civilized person, who cared at all (even if only for our young men and women in uniform who died), would now expect proof all that was justified. Claims, and a few rusted cans of insecticide, is hardly that proof.

Again, why the double-standard? Not EVERY citizen of Iraq is convinced that Hussein is gone for good. Then there's the matter of translation - think every soldier speaks Arabic?

> 2. Nobody is "interfering" with our "inspections" - the reason repeatedly
> offered to explain why the initial inspectors did not finding anything.
So? Why do you insist on instant results? And what makes you so certain that nothing has been found to this point? Because nothing was released to YOU? Get real.

> 3. There are several hundred thousand soldiers, not just a few inspectors,
> roaming all over that country with orders to report anything suspicious
they
> find. Darn little has been reported - certainly nothing to justify an
> invasion.

<sigh>
FIRST of all, it wasn't called "Operation Find WMDs in Iraq", now, was it? Second, and again, several thousand (not exactly) soldiers that are not proficient in Arabic, and whatever has been reported does not justify your allegation that nothing has been FOUND. If, for example, one site was found, you same people would THEN start on about how it was only one site, and make the same lame arguments. As others have stated, your only desire is to discredit the Bush administration.

> 4. Unlike the initial inspectors, those soldiers have to ability to
question
> anyone, kick down any door, search any person or vehicle, shoot anyone who
> resists, in the search for these weapons. Again, darn little has been
found.

Same answer - to the same reworded question. You're not making separate points, you're rewording the same thing over and over.

> 5. Our government claimed they "knew" about those weapons and justified an
> invasion of a country based on those claims.

<sigh>
All you can think about is your hatred for Bush, and the facts be damned. The US policy on Iraq has remained consistent, but you choose to latch on to one aspect of it, because it's the only thing you have - and again - you are not privy to what information the government has at this point. it doesn't mean they DON'T have anything.

> 6. More than a hundred of our young men and women, and god knows how many
> people in Iraq, died, with many more on both sides injured, maimed, or
> crippled, as a result of that invasion. Any civilized person, who cared at
> all (even if only for our young men and women in uniform who died), would
> now expect proof all that was justified.

The freedom of the people isn't enough for you? The idea that they can now live without the fear of torture or death? Again - you don't give a damn about those people.

> Claims, and a few rusted cans of
> insecticide, is hardly that proof.

And the government need not divulge every piece of information they have based on what YOU feel is a "timely manner".

The Iraqi people are NOT free. They cannot choose their own form of
government. The majority of Iraqis, the Shiia, want to have an Islamic
Theocracy. Rumsfeld and others have been on television saying "I don't see
that happening". Free people choose their own leaders, their own
government. Not what WE want.

Brenda, the form of government defined by us is a democracy. Within that framework they may pick who ever they desire.

Is your definition of freedom that the majority (the Shiia) may choose what ever form they want, to the detriment of all other Iraqi citizens?

You need to reexamine your position, the simplistic Kum-by-ya stuff does not work in a real world.

Because it's NOT happening. The Shiias are being influenced by Iranians. The LAST thing that is needed is to trade one dictator for another, one oppressive regime for another. The Shiias aren't the only game in town there, and forming such a theocracy would stifle the freedom of others there - the same as Hussein did. You suggest they trade one rabid dog for another. Even you should agree that every person in Iraq should have the right to practice whatever religion they CHOOSE. You need to keep in mind that the networks will sensationalize whatever they choose. Remember - while crowds of people were gathering in Baghdad, preparing to take down that statue, an ABC anchor was saying, in a somber tone, that he only sees a handful of people. Just because a couple of demonstrations in less than a handful of towns show up is no reason to start crying about the sky falling.

Maybe so - but that doesn't justify the immature response of "Bush stole the
election".

Is not our government by choice of the majority? If those people elect a
theocratic government, that is their choice, not ours, to make.

Don't recall saying that the sky is falling. All I'm saying is that WE have no right to tell the PEOPLE OF IRAQ what form of legal government they can or cannot elect. If the people of Iraq democratically elect a theocratic government, that's their business. And for your information, a theocratic government does not mean a totalitarian regime (though I will admit that it DOES happen that way). Saddam's government allowed freedom of religion (unless you happened to be Shiia) while oppressing ethnic MAJORITIES within the country. His own Tikriti tribe, and his Sunni sect were and are in the minority there, but managed to sieze power anyway.

How would you like it if I were to come up to you with a gun in my hand, and tell you that you can vote for whomever you like, as long as it wasn't a Republican, Democrat, Socialist, et. al.? Wouldn't feel a lot like freedom to you, now would it? Those people wanting to be led in a certain way is no different than those of us in the US choosing to be lead by big business ass-kissing conservatives or money grabbing tree kissing Democrats... it's our right to choose, majority rules, and it is theirs as well.

If ours were truly by majority, women wouldn't be voting and slavery would still be in vogue.

Ours country is a Republic, we do not have a democratic form of government. If the majority ruled, Gore would be president. Fortunately that is not the case.

Did Sesame Street not cover the electoral college?

I'm quite familiar with the electoral college. Also, I don't know what
planet you are from, but on the planet Earth, and in every country on her,
women are in the MAJORITY.

So where was the freedom of religion there? didn't you read anything about
what he did to Catholics and others?

> How would you like it if I were to come up to you with a gun in my hand,
and

That's ridiculous. Nobody is holding a gun to anyone's head - unless they're
one of those coming from other countries (such as Iran). As was explained
before, the totalitarian rulers in that region are afraid of an "outbreak"
of democracy, and will do everything they can to stop it. A free and
democratic iraq would set a precident - one that the rulers of other Arab
nations would NOT want to see.

> Those people wanting to be led in a certain way is no

You avoid one point - a theocracy of the type you suggest would stifle the
religious freedoms of everyone that doesn't adhere to their beliefs. I don't
know where you live, but I'm certain that you wouldn't appreciate your
government telling you what religion is the one you will belong to. And...as
a woman, I don't think you would support such a theocracy if you understood
how women are treated under such a theocracy.

Its relayed onto the CAR'S FM RADIO so you will need a 88 MHZ to 108 MHz Wide band FM capable scanner
with the ability to lock out frequencies during a search. Lock out
the broadcast FM stations as your doing a scan /search, in the broad cast FM band
check what's left to see if any one is using a device like your talking about.
You may also pick up CD players or other scanners they
also us stuff like that.

Or just try the Search/Scan button on your car's digital read out radio,
if its has this capability!
And the brute force method... just tune the FM band with the car radio. Try all of this if and when you see some one talking
to them selves in the next vehicle over when your stuck in traffic, you know,
with out an earbud planted aside there head of a cell phone
plasters up side the head Even if they appear to be talking to themselves, it could be they are singing along with their radio!
You may have more luck, and hear some communications using a FRS transceiver in scan mode or a scanner programed
with those frequencies while your in traffic. Try the interstate system on a week end or holiday.
Jim

If anyone living in, or visiting, the UK would like an up-to-date frequency list (VHF/UHF), I have one available from my webserver. Visit http://80.4.4.163/index.htm and follow the 'Radio' link.
I have updated my own local frequencies myself, and others have sent me frequencies to add/remove from the list. It currently includes just over 7000 entries.
The list is in Excel 2000 format (zipped).
RGDS, D Norris, site administrator.

3538. Radio frequencies for the Riverside County, California Sheriff Department????

Hehehe...probably, with a play on the title "That Touch Of Mink".
The IMDB doesn't show a movie in production by that title, so it's either
porn/extreme low budget/unknown type thing, _or_ it's a fake name, sometimes
done so people don't know what the project really is. Or the IMDB just
doesn't have the info.

Your story just doesn't ring true. If the officer believed your scanner was a violation, enough to make a big issue out of it according to you, he would have done something about it on the spot - he would not have threatened to do something at some later date. The fact that he didn't do anything clearly suggests your version of the story is not exactly the whole story.

What arrogant and ignorant comments? You're hearing only one side of the story and are verbally attacking the police officer based on that. Read over his version of the story again - it just doesn't ring true.

Good grief, could we use some common sense here? He's obviously
talking about anything incident to the stop itself, ie: getting pulled over
for speeding, getting a ticket, and then later on getting a bunch of "Oh, by
the way" tickets in the mail _related to that stop_. I could stretch your
interpretation to the point where he's implying that getting past a cop once
clears your record. "Hannibal Lecter, you're under arrest!" "Ah-hah! You
can't! I was pulled over yesterday and the copper didn't know who I was, so
I'M A FREE MAN NOW, bwahahahaha!"

Corruption and lawless behavior by those in official capacities,
particularly those with color of authority and access to deadly force, is
far, far worse than any sort of criminal behavior amongst the citizens.

Sorry, my friend, you must be thinking of someone else - I openly, fully, and quite verbally, supported Bush during the last election in this newsgroup, other newsgroups, and elsewhere. This is not about some vendetta against Bush. Instead, it is about the credibility of the United States Government - my government.

> (snip) Not EVERY citizen of Iraq is convinced that
> Hussein is gone for good. Then there's the matter of
> translation - think every soldier speaks Arabic?

Neither of those are required to find weapons. Buildings, vehicles, people, and storage facilities, can be searched without either of those.

> And what makes you so certain that nothing has been
> found to this point? Because nothing was released
> to YOU?

Can you offer even one reason why this government would keep a discovery of WMD quiet, especially with their credibility concerning the justification for this invasion openly being questioned around the world?

> FIRST of all, it wasn't called "Operation Find WMDs
> in Iraq", now, was it?

It has repeatedly been reported by the press, and said by military officials, that soldiers have been given orders to report anything suspicious they find. With several hundred thousand soldiers there, searching factories, buildings, people, and vehicles, something clearly should have been found by now.

> The freedom of the people isn't enough for you? The
> idea that they can now live without the fear of
> torture or death? Again - you don't give a damn
> about those people.

Give me a break. You, and most other supporters of this war, could not care less about the Iraqi people. They lived under Saddam's rule for decades without you, or those others, losing a moment of sleep over their situation.

To now throw this around like it truly means something to you reeks of utter hypocrisy.

What the hell are you Mark, his attorney? You seem to be speaking for him. So he got hassled, how many people in your/our life have we hassled. What the hell are a few words, it didn't cost and didn't hurt, unless this guy has such shin skin. Which from all the crying he does. He is acting like a little child who got his hands slapped. Cry- Cry- Cry. Get a life and move on.

Your last par Mark. Is that what the officer said? I "really" doubt that unless the officer is looking for an unpaid vacation. Like it or not, when police officers graduate from the academy they know the law. Any doubts, give it a try.

Why not go to the officer at his station and talk to him instead of posting this bull shit here. NO balls and looking for sympathy.

Go else where little boy.

>
>
> Your friend got pulled over because of some suspicion on the part of the
> officer (a drug neighborhood, thought speeding, vehicle similar to a
wanted
> vehicle, erratic driving, or whatever).

There was no suspicion, just the normal harassment. None of your theories even hold a candle. "Drug neighborhood?" In the middle of nowhere on a hi-way. Got that one right... "Thought speeding?" What the hell do I pay taxes for if the cops aren't going to use their cancer-causing radar guns that they used my money to buy? Sorry, wrong answer again... Similar vehicle? Nope. It was pitch black outside with glaring headlights coming at him, an equivalent speed of about 110MPH, and 3-lanes way... Sorry, he would have never seen a thing... "Erratic Driving?" Sorry... Wasn't any erratic driving... Keep guessing, as that's all your doing...

> After your friend checked out okay, he was allowed to go on his way.

Umm, yeah... Not even close. He was given a warning ticket for his front right tire. That one that the officer saw with his infrared binocular

vision that allowed him to make the stop in the first place.

> Why slander the Michigan State police over such a minor incident?

Minor? You call non-stop harassment minor? You must be a cop yourself.
What I stated was ONE example of MANY MANY harassment problems around here.

What your referring to as "slander" is nothing but the truth and therefore
is NOT slander. Then again, slander is spoken, so it wouldn't be slander
anyway, as this is written...

> > (snip) however, I too have had my fair share of run-ins
> > with these people. (snip)
>
> Ah, perhaps that explains it. And, since you didn't tell the story of
your
> own run-ins with the Michigan State police, perhaps you were not as
innocent
> as the friend in the story you did tell.
>

That explains nothing except that all you like to do is argue with people.
You should take you delusional mind and go find a flame war newsgroup
somewhere as the general populous of this newsgroup doesn't appreciate your
hostile attitude. You remind me of a couple of crabby, 90 year old women I
know... Always bitching and arguing about something... Ever seen the movie
"Grumpy Old Men"? You'd fit right in...

You want my story? Here's a briefing of it:
I could tell you my story of how I was talking with a group of friends after
work one night. We all saw the MSP driving down the main street of town (a
US hi-way mind you) at about 11PM, with their lights off, only to pull into
the lot we were standing in and turn them on just as they were pulling in.
There were 8 witnesses to the incident, and the officers just kept denying
the whole thing. I could also tell you about how during this same incident
they decided they wanted to harass my about the stereo I have in my car. It
was just an after-market tape deck I had installed about 3-years prior;
nothing fancy. They questioned me to no end about it. One of the questions
was where I got it from. They used the information I gave them to claim
that a number of the same units had recently been stolen from that
particular store. Funny thing is, the unit I had had been discontinued at
that store 2-years prior to this incident. No other units by that
manufacturer, or even another unit that even came close to looking like
mine, had been sold at that store since they discontinued it. They
continued to harass me about it, and wanted me to rip my dash apart and
remove it so they could "inspect" it; check out the serial number, etc. I
could also tell you that they threatened to rip it out themselves if I
couldn't prove that I had purchased it by providing a receipt.

Of course, I'm not the only one that was getting harassed, the others were
as well, but you just wanted MY story...

There you go! How's that grab ya? Hope it grabbed your balls and stretched them up over your head so as to mute your arguing ass!

I hope your happy now, there is a brief run-through of one of my harassment incidents. Need I provide more? Nah, didn't think so... Needless to say, the two asses, oops, I mean MSP officers, didn't stay in the area long, they were transferred to another posts due to the number of complaints that were filed against them. They weren't the first, and certainly haven't been the last...

Your comments would be better suited for alt.conspiracy. If you understood
what the Third Reich was about, you'd know that they were FAR from what you
refer to as "Conservative".

Pull an FCC report on your agency and compare the freq's listed to any that
are making odd noises on your scanner.

> people, and storage facilities, can be searched without either of those.

If it were only that easy. Have you seen the tunnels they've been finding? If what the world is searching for was in a readily available building, it would have been found long ago.

> > And what makes you so certain that nothing has been
> > found to this point? Because nothing was released
> > to YOU?
>
> Can you offer even one reason why this government would keep a discovery
> of WMD quiet, especially with their credibility concerning the

> for this invasion openly being questioned around the world?

Again, they can disclose what they have when they feel the time is right - not by YOUR timetable. And, once again, it wasn't called "Operation Find Iraq's WMDs".

> It has repeatedly been reported by the press, and said by military
> officials, that soldiers have been given orders to report anything
> suspicious they find.

True. But it was never their PRIMARY mission. Getting rid of Hussein's regime was.

> With several hundred thousand soldiers there,
> searching factories, buildings, people, and vehicles, something clearly
> should have been found by now.

You take a fairly naive view of this - they were NEVER given orders to search every inch of Iraq on the way to their objective. Why aren't you willing to give them at LEAST the amount of time that those that opposed this war were willing to give the UN inspectors?

> > The freedom of the people isn't enough for you? The
> > idea that they can now live without the fear of
> > torture or death? Again - you don't give a damn
> > about those people.

>
> Give me a break. You, and most other supporters of this war, could not

decades
> without you, or those others, losing a moment of sleep over their
situation.
> To now throw this around like it truly means something to you reeks of
utter
> hypocrisy.

No, you're wrong. This is ridiculous - because nothing had been done to this point, nothing should have been done? It's hypocricy to correct a problem? If you have a weed in your back yard and ignore it, then it becomes a larger weed and takes over your flower bed, are you then a hypocrite to then take out the weed? If you have a problem with your vehicle and ignore it until it becomes a major problem, are you not going to fix it? When Hitler came into power and the world ignored/turned a blind-eye to what HE was doing, was it wrong to take HIM and HIS regime out of power?

Without a known violation, the officer let him go on his way
> with a warning there may be a follow-up if a violation existed.

No, he did make note that I was in violation of the law by having the
scanner in my car, but instead of taking action then, he choose to keep me
in distress by stating that if he feels like charging me for a breaking a
law that doesn't exsist, he'll do it within 30 days. I'm going to pay the
fine for the ticket today and I will be bringing the matter of the scanner
up to the Chief of Police.

I think your problem is that you're an ex-cop, one that most likely would
pull the same scare tactic shit that the one I encountered did.

Dr. Fred Hambrecht Sr <vah2n25v5p8mb5@corp.supernews.com>...

^ Can anyone give me a hint as to where the mobile data terminals receive?
^ The system for normal communications is a Motorola Trunking System ...

I delayed in answering because I'm fairly certain I can't help. I'm not familiar with Motorola but if it works similar to EDACS then the data transmissions will be transmitted on the next available frequency in the trunking system, same as the voice transmissions. My Radio Shack scanners filter out the data transmissions and send only the voice transmissions to audio. When I scan the trunking frequencies normally, not trunked, then I can intercept the data transmissions.

I think the program you may be using was written for a dedicated data frequency, so if Motorola is similar to EDACS you may find that it's useless.

That's not quite true; the wireless telegraphy act does allow their use on 'public' areas of the radio spectrum (Ownership, manufacture, sale or import do not contravene the law). Private communications mustn't be listened to without permission of the user. You must be a little careful generally, as radio scanners had some bad press a few years ago. I just feel it's a shame that a minority of scanner owners misuse them, when they have so many legitimate uses too! For example, for a radio amateur, they are much more capable at monitoring multiple frequencies across several amateur bands - something which purpose built equipment either cannot do, or is very cumbersome at doing so. You can find out more about the legality of scanning over here at http://www.radio.gov.uk/publication/ra_info/ra169.htm RGDS, DN

Doubtful, anyone that has seen his signature line will recognize that he spends his entire life pushing on doors marked pull. I would bet he "copped" an attitude with the cop.

Officer: "What is that thing in your car?

Whiney Baby: "It's a scanner so I can listen to you pigs out here harassing people, what's it to ya"

The real freedom of the internet is that anyone with a keyboard may opine,
in spite of the lack of both knowledge and logical thought.

I get this mental picture of many typing like mad, singing "if I only had a
brain", as they regurgitate the latest MTV rant.

3574. Blue Angel Pilot Trash-Talks the Florida Central-East Coast!

Newsgroup: rec.radio.scanner
Date: 2003-04-25 22:47:46 UTC
From: GeorgeF <av8tor@licensed4fun.com>
Message-ID: <3EA9BB12.40202@licensed4fun.com>
Source record: 32036

Sunday is an airshow at the Patrick AFB in Florida. Both the USAF Thunderbirds and USN Blue Angels will be among the many performers at Sundayï¿½s show. Today (Thursday) the USN Blue Angels fly into town to get ready for their performance.

During one of their practice/orientation flights today I caught a very interesting comm of one of the Blue Angel pilots. Iï¿½m not sure which Blue this was however the air-air comms was taking place on 263.3500 MHz.

At 45 seconds and again at about 150 seconds into the audio youï¿½ll hear what these Blue Angel pilots really think of Florida! Here are some words they used ï¿½trashy, dirty, and redneckï¿½. Take a minute and listen for yourself. You can find the audio at http://www.MilAirComms.com/audiolibary

Listen and be as amazed as I wasï¿½.
George
http://www.MilAirComms.com

3575. Confirmed Blue Angel Freqs during inbound flight!

Newsgroup: rec.radio.scanner
Date: 2003-04-25 23:15:34 UTC
From: GeorgeF <av8tor@licensed4fun.com>
Message-ID: <3EA9C196.9070800@licensed4fun.com>
Source record: 32037

Today the USN Blue Angels arrive at the Patrick AFB to get ready for Sunday's airshow. I snagged their inbound comms which you can listen to at http://www.MilAirComms.com/audiolibary. I've included a list of Blue Angel frequencies you might want to use to monitor practice and Sunday's show.

142.0000 Ground Support (comm cart)
142.6250 Ground Support
143.6000 Ground Support
164.9000* Ground Support CH 6
168.9000 Ground Support CH 3
170.9000 Ground Support CH 1
236.4500 Unknown CH 17
238.1500* Diamond A-A CH 16
251.6000 Solo A-A
256.2500 Unknown
263.3500* Fat Albert CH 10
263.5000 Unknown
264.5500 Unknown
268.0000 Unknown
273.3500 Diamond A-A
275.3500 Diamond A-A CH 9
307.7000 Air-Ground BOSS
345.9000* Solo A-A CH 8

Freqs marked with a * I actually hear being used on 4/25/03 as they were arriving to Patrick and flying the area. .. Keep in mind there probably are more however I live 70 miles north of Patrick AFB and these were the comms I was able to catch at that distance.

For those interested in USAF Thunderbird freqs here's a list.

140.2000 Support Aircraft Cross Country Air-Air
141.4000 4 Plane Formation
141.8500* 4 Plane Formation Air-Air Linked to PA system V1
143.8500 4 Plane Formation Air-Air Linked to PA system V2
235.2500* Thunderbird Control
269.9000* Thunderbird Control to Air Boss
322.9500* Plane 5-6 Solo's Air-Air
413.0250 Maintenance/Ground Teams Channel 1
413.1000* Maintenance/Ground Teams Channel 2

Freqs marked with a * were confirmed by me during the November 2001 Thunderbird performance at Daytona Beach, FL. Full audio of this performance can be heard here: http://www.milaircomms.com/audio_library.html

say
> a word to him after this.
>

Telling the officer to "get your Sergeant down here. Now" does
not stop any discussion, nor does the officer have to comply. He
can simply advise you if you have an issue how to contact his
supervisor.

If he wants to write you, then you get the ticket. In this case, that
is exactly what happened, he got a ticket for the violation he was
pulled over for.

Attitude.... As others have said.

While it may be an uneducated guess, it is still wrong. If the officer
feels it may be a crime, he can research the law, and then make an
arrest, (if the situation calls for it).

Done that way all the time.

You obviously do not have a grasp of the situation in Iraq (are we
suprised?). It the Shiia who want to choose *their* way of
government, to be ruled by Shiia cleric, over any wishes of the
rest of the Iraqi people. That is not the people of Iraq making
the choice, just the Shiia.

>of the trust we place in them.

I've lied to 'citizens' more times than I can count. When I'm making a case on a violent felon, there's no law that says I have to play fair or tell the truth all the time.

All I have to do is obey the guidelines of the law, not make scumbags happy. I'd rather play it nice, but all the incomprehensible restrictions...with more being enacted all the time...make 'playing fair' virtually impossible, amigo.

If that's a 'violation of trust', so be it...my karma can take the dents. Of course, we can play it *your* way and wind up with anarchy.

When I was working 'on the street', I often called my sergeant(s) anyway...we were required to get a ranking officer's signature on the arrest paperwork before transport, if it was possible.

Of course, I quickly learned that if an individual was really making himself into an anal orifice, any Sergeant on the scene would *demand* an arrest, rather than issue a citation. Lieutenants were worse.

Folks, it's easier than that. I carry a PDA with the statutes plainly listed
and cross-referenced in it.

A more comprehensive version resides in my laptop computer.

I also have a current copy of my State's statutory criminal law &
procedure...the exact same lawbook the judges and district attorneys use, and
yes, I buy a new one each year, at my own expense.

And, if I can't find what I'm looking for in all that, I just pick up the
cellphone and consult with an Assistant District Attorney.
BTW, in my State (Louisiana), all the criminal statutes are listed and easily
accessed via the Attorney Geenral's website.

Not all that hard to research the current laws, is it?

> (about a 50 ft run) I do listening only)
For a 50 foot run, the loss in the Coax at frequencies above 150Mhz is
likely to dwarf any losses from the mismatch. The input to your
scanner is a nomial 50 ohms. In reality these are often simply
referred to as Lo-Z, because to be blunt, the input impedance wanders
significantly over the tuning range of the scanner. The actual loss
at the front end as a result of using a 72 or 75 ohm versus into a 50
ohm feed line is very small. It is at most a 1.5:1 VSWR, and by most
standards that is a pretty good match. The difference in signal level
is on the order of 1 db, and that assumes the input really is 50 ohms
across the spectrum.

If VHF and UHF reception are key, forget about the 50 and 72 ohm
parts, pick the cable with the lowest loss, because over 50 feet, that
is going to far larger then the loss from the imedance mismatch.

Ok, politics will be in play in a city that large, but what about your
immediate sergeant? If you told a victim there is insufficient
grounds for an arrest, couldn't you count on him to tell the victim
the same, even if he would have made the arrest had the been the one
to respond? Would he really take action if someone reported to him
that you did something minor, like swearing at them?

>>Vague, broadly defined charges, like
>>disorderly conduct allow, the cops to make the law as they go.
>
>Yes, I can see a policeman in front of the screening unit at the District
>Attorney's Office 'making the law' while trying to arrange for the DA to
>prosecute the case. Yeah, right.

Situation: I was part of a group of pro-life protestors, and we were
spread out along a busy public street. One of our members was
approached by a young cop. He was holding a sign and passing out
handbills. He had no megaphone, and was not yelling. He told the cop
he was peacefully exercising his constitutional rights, and that there
were no grounds to confront him. The cop demanded ID, and my friend
pulled out his wallet and lightly tossed it at the cop, bouncing off
the cop's chest. He then found his arm grabbed, forcefully twisted
behind his back, cuffs slapped on, and off to jail he went.

The DA filed the charges, and argued in court that my friend had
indeed done something wrong and criminal. (People in the justice
system do back each other up, right or wrong). The jury found him
guilty of disorderly conduct and obstructing a sidewalk.

The same guy also tells of an incident where he was patted down for
weapons, simply because, "Pro-Lifers are sometimes known to be
violent".

And funny you mention DA's. The papers told of one of the attorney's
in our local DA's office was convicted of disorderly conduct a few
years ago. He was in a liquor store and had forgotten his ID. The

sale was refused, and the unhappy attorney said the words f--- y---
several times to the clerk. An officer was present in the store, and
followed him into the parking lot and cited him.

As I said, vague, broadly defined charges, like disorderly conduct,
enable cops on the spot to declare anything they do not like to be
illegal.

>

Right, I'm concerned about police excess, therefore I must be a
criminal. The fact that I do not have a criminal record should
effectively serve to refute this notion.

I simply know what it was like to have lived as a teenage boy in
suburban California, where any group of teenage boys hanging out in a
parking lot "must be up to something".

Can you honestly say that in your LE career, you never confronted
someone you suspected, but did not have grounds to make an arrest, and
used his fear of going to jail to get him to admit to something
incriminating?

>If you told a victim there is insufficient
>grounds for an arrest, couldn't you count on him to tell the victim
>the same, even if he would have made the arrest had the been the one
>to respond?

Well...we don't usually arrest victims, unless they've committed a criminal offense. It *does* happen.

>Would he really take action if someone reported to him
>that you did something minor, like swearing at them?

Depending upon circumstances, the sergeant may, or may not. But we have a Public Integrity Division, the Office of Municipal Investigation, the Metropolitan Crime Commission, and the Civil Rights Division of the F.B.I., not to mention the State Attorney General's Office, who can enter into the proceedings if actual police misconduct is determined. And all complaints are entered into the Officer's personnel jacket, and a history of complaints is handled by retraining, counseling, or discipline, including termination or, if warranted, criminal and/or civil prosecution.

>The jury found him
>guilty of disorderly conduct and obstructing a sidewalk.

I'd have also charged him with simple battery, which is a misdemeanor here. He obviously had no legitimate reason to 'toss his wallet' at the Officer, did he?

As for 'confronting' the man in the first place, even you mentioned that your group was 'spread out' along a busy public street.
For all you know, the Officer may have been responding to a valid complaint from passing motorists, or trying to maintain orderly traffic flow. He might have been ordered to check on the group, by senior Officers. He might have been concerned about the group being so close to passing traffic...accidents *do* happen, and I can tell you that if a Police Officer is merely *in* an area and someone gets injured, it's automatically assumed that the individual Officer is somehow responsible, and that a civil suit must ensue. I can attest to that from personal experience.

Certainly we have the First Amendment in effect, but that doesn't guarantee that a 'group' can endanger passing traffic, or themselves, in their zeal to make themselves heard.

>The DA filed the charges, and argued in court that my friend had
>indeed done something wrong and criminal.

And I agree. But, if this incident troubles you so much, why not file a complaint with the police department...or the city, or the state, or the F.B.I.'s Civil Rights Division? Probably because the police actions were

deemed to be within legal guidelines.

>The same guy also tells of an incident where he was patted down for
>weapons, simply because, "Pro-Lifers are sometimes known to be
>violent".

Sounds suspicious, if it were limited to merely that, but the U.S. Supreme Court has ruled that a Police Officer may legally 'pat down' an individual he is 'officially interacting' with, for the purpose of ensuring the Officer's safety.

>An officer was present in the store, and
>followed him into the parking lot and cited him.

Sounds like the Officer performed his duties correctly, and the D.A.'s official was, quite properly, convicted for his criminal offense.

>As I said, vague, broadly defined charges, like disorderly conduct,
>enable cops on the spot to declare anything they do not like to be
>illegal.

If you've read any of my post(s), you'd see that Police Officers are *rigidly* limited in how they can perform their duties. 'Disorderly Conduct' is hardly a nebulous concept in any event.

>Right, I'm concerned about police excess, therefore I must be a
>criminal. The fact that I do not have a criminal record should
>effectively serve to refute this notion

I never said that. Within the confines of what you've shown here, you seemingly feel that *all police* are corrupt, because you feel they limit your freedom to do whatever you wish, in any matter you desire. Sorry.
>I simply know what it was like to have lived as a teenage boy in
>suburban California, where any group of teenage boys hanging out in a
>parking lot "must be up to something".

I was a teenager myself, once upon a time. And, from personal experience, both as a teenager and, later, as a police patrolman, yes, most of the time, when you find a group of teenage boys 'hanging out in a parking lot', they *are* up to something.

>Can you honestly say that in your LE career, you never confronted
>someone you suspected, but did not have grounds to make an arrest, and
>used his fear of going to jail to get him to admit to something
>incriminating?

Hell no! That would be quite stupid, and totally unprofessional. *Real* bad guys don't give a damn about going to jail, and I've had more than a few experiences of people committing crimes just *to get* into jail...usually because they needed medical attention, or wanted to fatten up a while.

No, my technique is to build a solid case, with physical evidence if possible, and whatever corrobation is available, and, after the case is more or less 'made', *then* talk to a suspect. If pays to do your homework in the business.

I'm not so hard up to *make cases* that I feel I have to browbeat average citizens who just want to get along in life. Most experiences cops I know feel exactly the same way.

Certainly, bad eggs get recruited and make it through the Academy and even the Field Training program, but they get caught sooner or later, and prosecuted if at all possible. DA's LOVE to convict cops.

Have 2 - low band - 46.40 MHz Motorola Minitor 1s here and a charger / amp. ALL were removed from service working. Will need only your tone reeds and new batteries. There are 2 sets of batteries with them, but old. Want to sell as set only. $45 plus shipping for all. Money Orders only. Check my e-bay profile for honesty. 100% positive. Let me know if interested, and we'll go from there.

Have also:

1 - 979.9 Hz reed from above $12.50 "shipped".
1 - 688.3 Hz reed from above $12.50 "shipped".

Interested? E-mail me directly

Thanks.

You really need to get a life. You posted your bull shit traffic stop in a radio scanner group, when the readers posted their comments in opposition to your wants you sat and cried, listed posters like a little child playing a game, refereed to the police as KKK's. What the hell is wrong with you? Didn't your Mommy love you enough when.....

This thread has gotten way out of hand. First of all, it doesn't belong in this group, it does belong in some psychiatric bull shit group where people can air their problems and all posters there cry together. Then take their prozac.

James S. Prine <20030425222947.13277.00000091@mb-m10.aol.com>...
^ > A cop lying to a citizen is a violation
^ >of the trust we place in them.
^
^ I've lied to 'citizens' more times than I can count. When I'm making a
^ case on a violent felon, there's no law that says I have to play fair
^ or tell the truth all the time.

The entire Constitution of the United States is based on fairness and truth. Justice is by definition fairness -- what you are claiming is a travesty of justice.

^ All I have to do is obey the guidelines of the law, not make scumbags
^ happy.

What is a scumbag? Someone who you believe to be a criminal but who in actuality may or may not be?

^ I'd rather play it nice, but all the incomprehensible restrictions...
^ with more being enacted all the time...make 'playing fair' virtually
^ impossible, amigo.

Those restrictions are placed there to protect me, the innocent guy, and it is the job of a cop to protect me from injustice by using those restrictions.

James S. Prine:
^ If that's a 'violation of trust', so be it...
Pappy:
^ The only "REAL" color here is "B L U E".

A cop is sworn to protect the people. That is why we have cops. What you and Pappy are suggesting here is that you only protect yourselves and that the people are an enemy. This is why you are seeing so many complaints here. Ideally (though perhaps somewhat unrealistically) you should be protecting us above yourselves, just as the military does, yet you have turned law enforcement into a private community that protects only its own interests and desires for the neighborhood and country.

^ course, we can play it *your* way and wind up with anarchy.

In my 50 years of life I have been victimized only once (articles stolen from my vehicle) by someone who was not a cop (I assume), but I have been victimized countless times by the people who we trust to protect us from victimization, our own cops. You and Pappy are presenting a false dilemma: you are suggesting that we either have abusive cops or we have anarchy. There are many police departments across the US who do not subscribe to this false dilemma, who have very good relationships with the people, and who are able

to satisfactorily suppress crime.

Frank

That's why they're all foaming at the mouth over the tax cut - they KNOW it
will boost the economy, and that's the LAST thing they want - for one thing,
they don't want anything good to happen on President Bush's watch, for
another, you'll be taking money away from all of their pet social programs -
the only thing that keeps ANY of them in office.

Hi
I want to buy a good scanner antenna for my IC-R2.

In my area there is not much activity so I need a powerfull
antenna. I have conclude to buy Austin Spectra
http://www.rfwiz.com/AustinAntenna/AustinAntennaSpectra.htm

or Nil-Jon Multiband Antenna http://www.grove-ent.com/ANT10MBS.html

I am interesting to receive from 118Mhz to 400Mhz

Which one is better? Any other suggestion?
Thanks a lot

You are so right! The prosecutors are often worse criminals than those they
prosecute! Of course they have absolute immunity. As I said before, I was
told personally by a Federal Magistrate that county prosecutors have
absolute immunity to threaten the lives of witnesses.

I have the NilJon antenna, their mobile ant is about the best you can find for 118-400 (95% of my listening is 225-400, 138-144). However for a base antenna you can do a bit better.

Check this out: http://users.cis.net/kingpop/Scantenna.htm Its the ScanTenna. I have two of these and for an Omni-directional antenna I don't think you could find an antenna to beat it! I've tried many omni-directional ants including $100+ discones and nothing can come close. About the only way to get something better would be to do to a beam such as http://users.cis.net/kingpop/Scan-log.htm (I have one of these too) and its a great beam for the money! It compares to my Create Log Periodic (a $300+ antenna) but doesn't cost nearly as much. You can see my shack and antennas at http://www.milaircomms.com/shack.html

Source record: 32085

>The entire Constitution of the United States is based on fairness and truth.
>Justice is by definition fairness -- what you are claiming is a travesty of
>justice.

Not at all, what you are playing at here is semantics, not justice. In case you weren't aware of it, countless attorneys and legislators have been subverting the Constitution for years. Justice is an ideal, not a reality.

>What is a scumbag? Someone who you believe to be a criminal but who in
>actuality may or may not be?
>

No, a 'scumbag' is an individual who is a professional criminal...the sort we see time and again, with a multi-page rapsheet, and usually a veteran of several prison terms. We don't create scumbags, they create themselves.

>Those restrictions are placed there to protect me, the innocent guy, and it
>is the job of a cop to protect me from injustice by using those restrictions.

No, not all of them, and you are, yet again, playing with semantics. Those 'restrictions' are what allows murderers and other violent criminals out on the street, time and again, because of the revolving door 'justice system' that's been allowed to proliferate. You really have this thing with 'justice', don't you?

>A cop is sworn to protect the people.

No, a cop is sworn to enforce laws. In reality, the 'cop' is protecting 'society', not individual people. Of course, if an Officer sticks his/her neck out in exigent circumstances to 'save' someone, the Officer is usually rewarded for it...by a lawsuit, or discipline. You know...part of those 'restrictions' we were discussing earlier.

>What you and
>Pappy are suggesting here is that you only protect yourselves and that the
>people are an enemy.

No, grasshopper, not at all. If I wanted to protect *myself*, I'd just quit and stay at home. The 'people' aren't the enemy, but the 'people' who prey upon them *are*. We call them 'criminals', and they don't worry about people at all, other than as being victims.

>This is why you are seeing so many complaints here.

No, we are seeing so many complaints because people like you have so many odd ideas about law enforcement. That is due, no doubt, to decades of social programming and idiotic Hollywood representations of police work.

>you should be protecting us
>above yourselves, just as the military does, yet you have turned law
>enforcement into a private community that protects only its own interests and
>desires for the neighborhood and country.

I wonder what sort of tortured logic you devised to construct this odd bit of reasoning? Law enforcement as a 'private community'? Protecting only it's 'own interests'? C'mon...you're from San francisco, right?

>In my 50 years of life I have been victimized only once (articles stolen from
>my vehicle) by someone who was not a cop (I assume),

Very cute...your hatred of law enforcers is showing itself a little here, be careful...

>I have been
>victimized countless times by the people who we trust to protect us from
>victimization, our own cops.

I wish you'd expand on that. Countless times? Interesting.

>you are suggesting that we either have abusive cops or we have anarchy.

Not at all...I've never said anything of the sort. People like you portray cops as 'abusive' just for going about their business in a normal, professional fashion, obeying all the laws, statutes, rules, and regulations, and risking their lives, time and again, in pursuit of their tasks.

>There
>are many police departments across the US who do not subscribe to this false
>dilemma, who have very good relationships with the people, and who are able
>to satisfactorily suppress crime.

You *must* live in a truly wonderful little paradise...hardly the real world, and definitely not the world I've lived in for the past 52 years, but go ahead, it sounds wonderful, Frank. I might retire and move there myself!

> > the choice, just the Shiia.

Sorry, but it's YOU who fails to grasp the situation in Iraq! The Shiia represent about 60% of the population of Iraq which makes them the clear majority. Iraq has been ruled by the Sunni's for decades who only are about 10% of the Iraqi population, with 20% being Kurds. The Shiia are demanding their right to rule as the majority and I don't think you can deny them that after decades of suppression of that right.

3621. "NXX" on 389 kHz

Newsgroup: rec.radio.scanner

NDB's are used for instrument flight to mark some intersections as well as being used for non-precision approaches.

In other areas of the world they are used much more than in the US. They have an advantage where there is long distances between points. For example over water, it may be impossible at low altitudes to pick up a VOR, but NDB's work well.

THen you don't think all that well.

It's the BUSH administration - remember?

They didn't go all the way to Iraq to let the Iraqis vote for a bunch of
religious people. We are going to bring them democracy the USA way -
where they will have the right to vote for any American Puppet they
please.

Or else.

NDB's: the ultimate low band, low power DX. I have heard over 700 in 30 states and 26 countries...before the advent of the internet and realitve ease in which one can be identified today. The first few nights of Fall when the temperature really drops for the first time and ushers cold weather into your listening area are incredible nights for listening and also just before dawn. In a horserace one night with another ham op I found over 50 new ones due to a temperature drop among other things. Used nothing anymore than a longwire antenna and an Icom R71A. Still take a Sony 2010 along on trips just to find a new one from time to time. Pat, K4AVO (All-Icom)

James S. Prine <20030426120152.25654.00000091@mb-m21.aol.com>...

Semantics are a necessary part of language. If you ignore semantics then you are ignoring the language.

^ >The entire Constitution of the United States is based on fairness
^ >and truth. Justice is by definition fairness -- what you are
^ >claiming is a travesty of justice.
^
^ Not at all, what you are playing at here is semantics, not justice. In case
^ you weren't aware of it, countless attorneys and legislators

... and cops ...

^ have been subverting the Constitution for years. Justice is an ideal,
^ not a reality.

Precisely our complaint.

^ >Those restrictions are placed there to protect me, the innocent guy,
^ >and it is the job of a cop to protect me from injustice by using those
^ >restrictions.
^
^ No, not all of them, and you are, yet again, playing with semantics.
^ Those 'restrictions' are what allows murderers and other violent
^ criminals out on the street, time and again, because of the revolving
^ door 'justice system' that's been allowed to proliferate.

So you're suggesting that it's better to harass, terrorize, and convict innocent people just so that one criminal doesn't go free? Hogwash! You can't get them all all of the time and it is better to let some get by than to violate an innocent person's liberties. There are innocent people in prison -- even on death row! -- and by your implication that is much better than taking the chance of letting a criminal go free! You should not have been a cop and I'm glad that you no longer are -- I just hope that you didn't move to another position in the justice/legal system somewhere.

^ You really have this thing with 'justice', don't you?

Yes!

I could continue with the remainder of your counter arguments but I think the foregoing should be sufficient.

A repeater's job is to take your weak incoming signal and retransmit it at a higher wattage. To do this in real time without feedback, the repeater transmits your signal on a different frequency.

In other words, if you are not transmitting to the repeater, but only listening, only one of the pair will "work".

The repeater is receiving on one frequency and either 5 mhz above or below
that frequency it is transmitting. YOU need to be on the transmitting
frequency. If not then you will only hear some of the closer stations to
you.

>Precisely our complaint.

It's too bad. I'd like to live in an ideal world, too...who wouldn't? ---but I have to live in the real world instead.

>So you're suggesting that it's better to harass, terrorize, and convict
>innocent people just so that one criminal doesn't go free? Hogwash!

Hogwash indeed...I never said *anything* about harrassing, terrorizing, and convicting inocent people...of anything. I go after criminals, not innocent people. Why, indeed, would I risk losing my career, paying a fine, imprisonment, and dishonor, merely to try to intimidate, harass, or terrorize innocent people, when there are so many truly dangerous wackos out there?

>You can't
>get them all all of the time and it is better to let some get by than to
>violate an innocent person's liberties.

Are you being deliberately obtuse? Again...let me emphasize this...again, I go after violent criminals, *not* innocent people. Can you understand that simple idea? I don't work traffic, I don't write parking tickets, I don't put people in jail for simple little nonviolent crimes, my friend.

>There are innocent people in prison
>-- even on death row! -- and by your implication that is much better than
>taking the chance of letting a criminal go free!

You've apparently turned Blackstone on his head, and opine that it's better that 100 innocent people be murdered than one violent felon be inconvenienced by actually going to prison.

>You should not have been a
>cop and I'm glad that you no longer are -- I just hope that you didn't move
>to another position in the justice/legal system somewhere.

Well, you're entitled to your opinion, even if you are rather a simple-minded twit with pretensions of lucidity. You probably even mean well, but you're as ineffectual and starry-eyed as most of you people usually are. Of course, you say that you've been on the wrong side of law enforcers 'thousands of times', so your reasoning might be in question, but that's neither here nor there.

>I could continue with the remainder of your counter arguments but I think the
>foregoing should be sufficient.

Yes, and the old Roman adage, which I personally utilize in my duties, might prove of interest to you: "salus populi suprema lex esto"...which you might better understand as 'the welfare of the people is the greatest law'.

If you key in -all- the public service frequencies listed in a radioshack guide for your area, even the ones not marked (p)olice or (f)ire - you will usually get the TACtical channels the police are currently using.

Assuming it's not a trunked system, all I can think of for a "privacy" feature is a dispatch console switch that changes both frequencies to a pair of frequencies that come up on a rotating list. Usualy a county or city has available frequencies on its license it can do this with. All those frequencies are listed with the FCC or whatever they call themselves nowadays.

James S. Prine <20030426195359.28141.00000221@mb-m14.aol.com>...

^ I'd like to live in an ideal world, too...who wouldn't? ---but I
^ have to live in the real world instead.

We are constantly changing the real world. I'm glad you've given up -- it'll make our task just that much easier.

^ Are you being deliberately obtuse? Again...let me emphasize
^ this...again, I go after violent criminals, *not* innocent people.
^ Can you understand that simple idea?

This discussion isn't about you -- it's about being harassed over a scanner after being stopped for a seatbelt violation and other such incidents. Possession of a scanner is not a crime and failure to properly wear a seatbelt is not violent.

^ You've apparently turned Blackstone on his head, and opine that it's
^ better that 100 innocent people be murdered than one violent felon be
^ inconvenienced by actually going to prison.

I have suggested no such thing, that would also be a false dilemma. What I suggested is actually the practice in many places.

^ Well, you're entitled to your opinion, even if you are rather a simple-
^ minded twit with pretensions of lucidity.
^ ... you're as ineffectual and starry-eyed as most of you people
^ usually are.

You are definitely typical of most cops, in that you are resorting to abuse in an attempt to force your desires.

^ Of course, you say that you've been on the wrong side
^ of law enforcers 'thousands of times', so your reasoning might be in
^ question, but that's neither here nor there.

I said no such thing, I said "I have been victimized countless times by the people who we trust to protect us", and my reasoning is from experience in military law enforcement.

>We are constantly changing the real world. I'm glad you've given up -- it'll
>make our task just that much easier.

I have hardly given up. And this little piece you've just penned sounds much like one of the rants of old man Kruschev.

>This discussion isn't about you -- it's about being harassed over a scanner
>after being stopped for a seatbelt violation and other such incidents.
>Possession of a scanner is not a crime and failure to properly wear a
>seatbelt is not violent.

Pardon, but you *made* this discussion about me, so I merely made my position clear. And, contrary to your contention that 'possession of a scanner is not a crime', that is patently untrue, in many jurisdictions, and in many circumstances. As for the seatbelt violation, I agree with you...it certainly isn't a violent crime.

Here in Louisiana, the legislature, in its infinite wisdom, passed legislation that made driving an automobile without a seatbelt a criminal offense, and, in the same session, did away with the law that required motorcyclists to wear helmets.
However, if you don't like the laws, then by all means change them.

>^ You've apparently turned Blackstone on his head, and opine that it's
>^ better that 100 innocent people be murdered than one violent felon be
>^ inconvenienced by actually going to prison. I have suggested no such thing,
that would also be a false dilemma. What I
>suggested is actually the practice in many places.

Yes...Afghanistan, Syria, South Africa....

>You are definitely typical of most cops, in that you are resorting to abuse
>in an attempt to force your desires.

Abuse? Hardly. I'm not trying to 'force my desires' upon you or anyone else. I couldn't care less what you or your cronies do or think...unless you violate the laws I've been sworn to enforce.

>I said no such thing, I said "I have been victimized countless times by the
>people who we trust to protect us", and my reasoning is from experience in
>military law enforcement.

Ah...military law enforcement. That is truly interesting. Apples and oranges. So sorry, my ESP module is out for service, and I wasn't aware that you were actually equating military law enforcement with civilian law enforcement. Point of fact, is that most civilian law enforcement agencies don't count military law enforcement as legitimate experience, because of the vast

diversity in philosophies and methods, when hiring recruits.

>I think Frank is a troll.

I don't know. I like to come here and read about scanning, because I'm a radio enthusiast myself, and have been for many years...even before I went into law enforcement.

I dislike people mindlessly bashing cops, especially when I've seen so many good policemen badmouthed by people who count for little in *any* society.

As I've posted before, certainly lousy cops are out there, and I feel they must be identified and removed from service whenever possible, as swiftly as possible.

All this talk of 'justice' is nonsense, pure and simple. I was amazed and disgusted when I was a rookie, when I saw the real effects of plea bargains and how the 'justice system' is nothing more than lousy compromises, often for political reasons.

However, I digress...back to radio scanning, for God's sake....

I have no idea why your friend was actually pulled over, which is why I said "or whatever." But I do know your claim of harassment is far less logical than anything I suggested as a possible reason.

> Umm, yeah... Not even close. He was given a warning
> ticket for his front right tire. (snip)

Was his front tire bad? If so, he should have gotten a warning ticket. Where is the harassment in that? If the officer really wanted to harass, he probably could have impounded the unsafe vehicle and told your friend to find other transportation until the tire was fixed. Instead, your friend drove away with a warning to fix a defective tire - a tire that should have been fixed anyway.

> (snip) I hope your happy now, there is a brief run-
> through of one of my harassment incidents. (snip)

Not really. What you say doesn't affect my happiness. However, I'm still waiting for an example to support your claim that the Michigan State police are "worse criminals than the criminals themselves."

He said it exactly that way - you're violating the law? If so, why didn't he do something about it on the spot?

Or did he instead say I "believe" you're violating the law, but I'm going to check on it? That would better explain why he didn't do anything while he had your pulled over.

Damn Dwight, how can you not understand being stopped by a cop for a bad tire is exactly the same as someone entering your home in the middle of the night, and killing your entire family.

Where is your compassion for those that were inconvenienced by the terrible cops?

I should be able to treat a cop like scum and have him suppress any animosity towards me. After all it is MY taxes earned flipping burgers that pays his salary.

Besides he should be out chasing real criminals and leaving me alone. It's my choice if I want to smoke dope and drive on may pops. Their all the same, they only took the job to hassle people.

What more proof could you possible need? If you disagree, you are probably a right wing, communist, Nazi.

Read that over again in the context of this discussion - a person stopped for a seat belt violation also being questioned about the scanner in his vehicle. Once you're finished reading, please explain how it is a violation of the public trust for a police officer to confront a person about a possible scanner law violation. Then explain how that confrontation denied that person of his peaceful and safe life?

> (snip) A cop lying to a citizen is a violation of
> the trust we place in them. This particular cop
> should either be disciplined or have his badge
> taken away.

A little extreme, don't you think, Frank? You read one person's interpretation of what a police officer said (what he wrote wasn't exactly a tape recording) and now you want the officer's badge taken away.

Yes, because it does undermine public trust, officers should avoid lying. However, just like any other citizen, a police officer is only required to tell the absolute truth in signed statements of fact or on the witness stand. Beyond that, is is simply in the best interests of the officer and his department to tell the truth where possible.

5 MHz split sounds like UHF, generally the input is the higher frequency.
Example: my local PD uses 460.325 MHz with a 5 MHz split, that means the
repeater input is 465.325 MHz and the output (what you would want to listen
to) is 460.325 MHz. OK?

Hello All,

I'm sitting here Listening to my DJ-X3 and i'm in scanning mode and i'm listening to our local police frequency (866.2250 MHz).

I don't know what division i have on but it's really weird not only am i hearing lets say 31 division but i'm getting 12, 13, 14, 22, 54, 55, division police station frequencies. Also I'm getting Fire Department calls too.

Is this normal ?

Thank-you

"Bob Purcell" wrote:

> so which one do i listen to?

The frequency listed is most often the repeater's transmit frequency - the frequency you want to listen to. The repeater receives on a frequency 5 MHz above or below that frequency (listed with a "+5" for above or "-5" for below the receive frequency).

The use of two frequencies allows the repeater to receive at the same time it transmits. In other words, it retransmits what it receives as it is receiving it.

This system is very useful for those using a weaker handheld radio. The repeater receives what the handheld transmits and retransmits it with more power using a much taller antenna. This allows the transmission from the handheld to be heard over much greater distances than would be possible with just the handheld's low power output and small antenna.

http://quote.bloomberg.com/apps/news?pid=10000087&sid=aE6i82jdgsUg&refer=top_world_news

Bush Aims to Say Military Part of War Over Next Week, Aides Say
By Richard Keil and Washington
Washington, April 25 (Bloomberg) -- President George W. Bush intends to use a speech aboard a U.S. Navy aircraft carrier next week to declare that the military phase of the toppling of Saddam Hussein's regime in Iraq has come to an end, two administration officials said.

The speech, still being crafted, will say that while the armed conflict with an organized Iraqi army has come to an end, U.S. forces face potential sniper attacks and skirmishes with loosely organized Hussein loyalists or anti-U.S. fighters from Iraq and other Middle Eastern nations, the aides said.

Bush has said he won't declare an end to the war until General Tommy Franks, the U.S. armed forces commander in Iraq, tells him that a military victory has been achieved. Bush's plan to fly to the carrier Abraham Lincoln to deliver the May 1 speech marks a shift of focus to rebuilding Iraq and helping install a democratic government after 35 years of dictatorship.

Defense Secretary Donald Rumsfeld said today's war is different from ``World War I or World War II that starts and then ends.'' In Afghanistan, ``we moved from major military activities to a point where at the present time, the vast majority of the country is in a stabilization security mode, it's not in a major military activity mode, except along the Pakistan border.''

``How it will shake out in Iraq remains to be seen,'' Rumsfeld told reporters. ``We're still having people killed. We'll get there.''

Terror War Link

The Geneva Convention, an international code of conduct for wars and military conflict, generally requires that victorious armies release any prisoners of war captured during battle. The Bush administration has portrayed its Iraq campaign as an outgrowth of the war on terrorism.

Hundreds of pro-Taliban soldiers and militiamen captured during the campaign to oust Afghanistan's government in 2001 remain in the custody of U.S. military forces in Guantanamo Bay, Cuba, because of their potential ties to terrorist networks.

While Franks has not yet told Bush that the battle is over, the administration aides said, the commander's reports from the field -- and the capitulation of Hussein's government -- have convinced Bush and his top

advisers that barring a sudden, unforeseen uprising from organized resistance forces in Iraq or a major battle setback, it's time to deliver a high-profile speech outlining the status of hostilities.

While the exact language has yet to be agreed upon, the two White House officials said Bush would repeat assurances that the U.S. government is committed to helping rebuild Iraq, and foster democracy in the country with the world's second largest oil reserves.

Bush will discuss that theme April 28 in a roundtable with Arab-Americans and Iraqi exiles in Dearborn, Michigan.

Carrier Headed Home

He'll travel May 1 to San Diego, then fly to the carrier Lincoln, now making its way back to its home port after serving as a base for bombing missions against Iraq. The carrier deployed to the Persian Gulf 10 months ago.

Bush intends to say the search for weapons of mass destruction - the removal of which the U.S. used as justification for the war - will continue, while leaving open the possibility that Hussein may have destroyed or sneaked out of Iraq many of his chemical and biological weapons agents before the war began.

Bush raised the possibility yesterday in a speech at General Dynamics Corp. tank construction plant in Lima, Ohio, to suggest for the first time that the U.S. might not discover massive stores of chemical or biological weapons agents.

White House Press Secretary Ari Fleischer said the Lincoln was supposed to return to port at the end of its typical six-month deployment but stayed in the Gulf region when its tour ended in January because of the possibility of war with Iraq.

Sounds like an anolog trunking system, i.e. equipment uses one channel
to negotiate which other channelt o jump to. This allows lots of
companies/customers etc to use relatively few frequencies, as long as
not all of them are using it at the same time.

> possible scanner law violation.

Because there is no violation of the states scanner law. So just the fact
that the KKKop didn't know the law he was supposed to be enforcing is a
violation of public trust. If a KKKop starts harrassing me about a law that
was repealed 8 years ago, then that is not working within the public trust.

Guess that's why they're cops and not lawyers. One actually knows the law
while the other doesn't.

> Happy?

I'll be happy when there is a Pro-Voice capable card so I can buy a BC250D, and listen in on the
local fire service and police which both broadcast on a trunked digital system that uses Pro-Voice.

But I'm happy with the BC245XLT and the BC780XLT I have. Soon it will be time to take the BC245XLT out on a
road test (meaning taking my vehicle out for a burn on the freeway doing a check ride. 150 miles round trip).

Will also be happy when Americans build strong American homes...

...by using top quality British Columbia lumber products.

I'll pass on the rest of the commentary. I get my American news fix through ABC.

Hello,
The apartment complex that I live in is going to install a distributed Dish system in order to get rid of the dish's that tenants like myself have on the balconies.
I want to keep my dish and I need ideas from you all that I can use to keep it!
I already know that federal law states that I can have a dish but mine is now mounted to the building.
So, I remove the dish from the building and put it back on a tripod, can the apartment owner say anything about it??
I also have other radio antennas outside and I am looking for ideas that would allow me to also keep my dish.

Thanks To All,

Ralph

i would hope so.

i'v seen what you are describing, and it looks no more conspicuos then a chair or a flower pot.

however, some if not most condo/apartment complex's are extremely anal over stuff like that.

wish you the best of luck.

^ So, I remove the dish from the building and put it back on a tripod,
^ can the apartment owner say anything about it??

I think that depends entirely on your contact with them. If the antenna and tripod are on your patio or balcony and you drape a sheet or thin tablecloth over it then there might never be a problem.

Frank

3672. Trunked Radio Information Homepage Updates

Hello Everyone!

I want to take a quick moment and bring everyone up to speed on the status of www.trunkedradio.net. Over the past 4 years, this site has become one of the premier places to find information regarding trunked radio and digital systems. All of the success of this resource is due to the tireless efforts of our database administrators, and contributors such as yourselves who submit quality updated information to the database.

Here is a list of some of the accomplishments the database has achieved over the past 4 years:

- Detailed information for 2,445 systems worldwide
- Over 60,000 talkgroups in the database
- Over 39282 trunked frequencies in the database
- 34 volunteer database administrators to manage the data
- Totally automated on-line submission interface for changes/additions/feedback
- Over 12,000 posts in the discussion forums from over 14,000 Registered Members.

Moving forward, www.trunkedradio.net needs your help. We are always looking for volunteers to help with the management of the trunked radio data in the database. Would you like to be a part of this wonderful resource? Send us a message to webmaster at trunkedradio.net if you are interested in being a database administrator.

Also, we need everyone's assistance to verify that the data in the database is up-to-date and accurate. Please take a moment to look at your local systems, and submit any changes to us that you feel would increase the quality of the database.

...and as always, feedback, comments, and suggestions for improvement are always welcome!!

Thanks for all your assistance and support!

Lindsay Blanton

First off, cops do this sort of thing a lot. If they dont like something, they will start spouting off about some "law" concerning it that doesnt exist. Tell the guy to write you the ticket for it, then and there. He will have to answer for it when this gets to court, and it gets thrown out (this is providing that it ever gets that far, which I doubt). Most cops, although they will try to bullshit you, will not write the actual violation up, since it will seriously hurt their credibility , not only with their boss, but with the courts and judges as well. Cops can't afford this sort of thing. Remember, to even write you up for the violation, he has to quote a valid statute for the law that he is referring to right on the ticket .

I think they where pullin your leg!! Or you have been watching to much SiFi :-) In any case you wont know what you can or can not listen in on if you don't punch some frequ's into your scanner. You can buy the "Mr Scanner's CD Rom, A Raw dump of the FCC Database for the U.S. & Territories, Coverage from 25 MHz to 1300 MHz, Includes longitude & latitude of transmitters Entire database in excess of 3 Million records" a complete list of every frequ in North America for like $25.00. From http://www.grove-ent.com/SFT10.html . All frequ's in the USA are public knowledge and available to any US ciizen :-)

3682. Re: repeater - splt

Newsgroup: rec.radio.scanner
Date: 2003-04-27 17:25:14 UTC
From: Texas Steven <rothrock@stic.net>
Message-ID: <3eac127c$0$43856$39cecf19@news.twtelecom.net>
Source record: 31898
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Question: What's the difference between the repeater input and output freq.
I wanna listen to a repeater - there is a split of 5 mhz -
what the heck does that mean to me

Answer: A repeater 's split is the input channel and a output channel. In order a "repeater" to work it's function is to utilize a input channel (yes...usually 5 mhz apart from the output channel. But let's go a little bit back to basics 1st. You know with most radio services it's usually "simplex". Meaning one person keys up and transmits and then unkeys and then the other person keys up and talks....on the same channel (or frequency) Now the range is usually very, very limited bercause one is at ground level.

Now if you could use a repeater. your range will be increased because a repeater's antenna is usually on a water tower or radio stucture or building or any other source. The way a repeater works is that it has a input frequency and a output frequency and will transmit what it receives simuatanously (sp)

I have such a repeater. Set your scanner to the output channel (frequency) which is 147.160 mhz. When someone "get into it" and brings it up they must use the receiving frequency which is 147.760 which in this case just 600 khz above the output channel of 147.160

They call this a 600 khz split.

I also have a UHF repeater

444.500 output
449.500 input

meaning...that someone transmits on 449.500 (with low power such as a walkie talkie for example) and come out 444.500 MOST of the time..you do NOT hear anyone of the input channel because they ARE using such low power.. Why do one needs high power...let the repeater work for you, unless, of course one is far from the repeater and they have to use HIGH power to "get into" and reach the repeater.

So find out which frequency is the OUTPUT of what you want to listen to and set your scanner to the OUTPUT channel.

Good Luck!!

Well Ralph:

Thats the price you pay when the property you live in is not you'rs.. If they apartment owners say get it off the property you can ether get it off the property or move your choice.

hello all
i've been lurking her for a little while and looked up some info but it
didnt really answer the questions i had about the 780 and 895 which i am
looking at purchasing one or the other
what does one do that the other doesnt , whats the pros and cons?
whats the advantages of controlling the units by computer remote?
one i have picked up on is the channel increase it seems for both units...
is there a preferred software package for one and not the other?
is uniden going or already stop support for these two since they are
introducing the "d" units?

thanks for everyones input in advance
harvey

Why is it that I don't see these alleged pop-upos that you keep
blubberinbg about? If you don't like cookies, turn them off. Most
users find them useful.

Walt

All we have are part time prosecuting attornies, our local policy
says write a report, and forward it to the PA's office, then they
can decide if they wish to prosecute. (unless fear of imminent flight,
in a felony case)

If you don't want the popups, make a donation and they disappear.

As for the cookies, if you don't keep them, you have to re-log in every time you go to the site.

This is Willow Grove NAS - puts out a very good signal over the metro Philly area. Signals in the 200 - 400 kHz area are used as NDB's - non-directional beacons. Aircraft "home in" on the signal to get to its location.

Our road deputies are considered high paid for this area, at 21-26k.

Next county over the deputies make 18, and drive their own cars.

Source record: 31921

OK, I can help you on that.
I had an 895 It was ok and then I got the 780 it was better.
Here are the reasons.
1. Can scan Conventional and Trunk at the same time.
2. More user friendly.
3. Programming cable is easier to get along with the software
4. More commonly used.

I like to listen to Mass SP and my regular towns using low band and what
not. So I made group 1-5 my State Police and 6-10 my Police,FD and what not.

I'd personally think about the 785 so you can use APCO-25 in the future if
need be.

Good Luck,
JOHN

The Minneapolis area has just such an NDB. Can't remember the frequency
though. Av WX reports are also broadcast on that NDB freq.

>Our road deputies are considered high paid for this area, at 21-26k.

Here in metro New Orleans, there is St. Bernard Parish, where the deputies must supply their own uniforms, leather gear, raincoats, jackets, sidearms, batons, you name it. Yes, they have to buy their own radios, too. And they subsist on the princely sum of approx. $875.00 a month, plus $350 or so a month, after a year, in State Supplemental pay.

What boggles the mind is that people actually *want* the job!

You can listen to them on 453.900 MHz. or 453.650 MHz. in the metro area.

LOL. I must be getting old. I don't understand his mentality at all. Are there bad cops out there? Of course. Should we be concerned about that? Of course. But THIS stuff (a warning to fix a bad tire or a discussion about a scanner) is just not something to rant about.

I'll try this one more time - and since you don't like my words, we'll use your own. How is being "told the NJ laws are bunk by an official sworn to uphold them" harassment? In what way was anyone "harassed" by those words?

This is not harassment, Mark. During a traffic stop, the officer asked about the scanner in his vehicle. A 'discussion' ensued, during which, according to the side of the story we've heard, the officer supposedly made that statement. That 'discussion' eventually ended and the driver went on his way. I don't see the harassment in all that.

Instead, based on what I've read here, the guy has a major attitude. If he displayed that same attitude during that traffic stop, I suspect the officer felt more harassed than the person (the driver) complaining here.

If I want to set up something like the Trunker program just to see the activity on the data channels of an 800 MHz Motorola system, do I need to have a trunk tracker scanner, or will any scanner that can tune to those frequencies do? I mean, if I am not using the scanner to actually tune into the talk groups, do I need the trunk tracking feature at all?

Fellows,
I am interesting in buying a new scanner for myself. I am a beginner so not qualified in choosing one of few scanners.
The question is: Icom IC-R5, Yaesu VR-120D and Alinco DJ-X3 with one to chose?
The prices in my country for these model is: IC-R5 - 290 euro; VR-120D - 205 euro and DJ-X3 - 180 euro.
I would like to have more for less price:-)
Your opinion, suggestions are warmly welcome.
Thanks in advice,
Edgar

3724. *******BEWARE OF SALES OR TRADING WITH "Mitch Roberston"

Newsgroup: rec.radio.scanner
Date: 2003-04-28 19:36:46 UTC

Ya know I always know better but for some reason this time I didn't heed my own warning. I had advertised a HR2600 with a chipswitch and 2 - 150 amps for sale. One having a preamp switch problem and needed a new switch but the amp side worked perfectly. And I got alot of action but no sales. Well after 2-3 months I got an email from

MITCH N2RADIO [mitch@n2radio.com] MITCHELL Robertson [MR_CPTN@militaryministry.net]

Stating that he had a 6900TB to and an Boomer 600 amp to trade for my stuff. I was like ok, no problem. I got everything packaged up in bubble wrap and boxed real well. And waited for ups to pick it up. And he was to do the same. Well he gave me a tracking number 2 days later and the package was on its way to me. Well mine left and went to him. I triple checked the operation of all the equipment before I packaged it up. Just because I did a trade earlier that month (Sept) and had a DOA problem with a scanner. So I made sure that the equip worked perfectly. Well I found out that Mitch was in the military and was being shipped out. And his family is moving. So they wouldn't be able to get email for some time.

Well the package arrived at completely the wrong address, which was intentional because Mitch and his wife Laura had both double-checked the shipping addy with me. I finally get the package and guess what? Its 3 Chilton's repair manuals no equipment to be found. Well did I get hosed but bad. So over the next 4 months I emailed both addresses well over a hundred times. And no response at all. Well I have a few connections in the military and I'm making some requests. I'll see what happens it should be interesting to say the least. The last email I sent Mitch and his wife I told him this and told him by Jan 1 If I didn't hear anything I would take action. Still no reply!!

Well as I'm typing guess what, I get a box in ups!! SO I open it up and there is my 2600 back and one 150 amp that I sent to him. And a note that the 2600 doesn't receive, the first amp is dead, and he kept the other amp and sent me 2 beat up 15.00 microphones one with an echo. DAM JUNK!! And a mini para dynamics meter DOUBLE JUNK!!! Then he has the balls to throw in a pc board for an amp kit. Well I just wanted EVERYONE to know what happened to me. So if you do business with him BEWARE I warned you.

Robert Mitchell AKA Mitch Robertson AKA deadbeat user

(to Walt)
There usually is one pop up when you first go in. Then you're pop-up free.

(to all the whiners in this thread)

Popups and banners are no big deal to me! *somebody* has to pay for the site! If you don't want to see them then YOU can help pay for it.

Whiners, show us all your website that gives better info than this one, without the cookies and pop ups.

Oh that's right - you don't have one..... exclamation point.

Yes! I've done it before, and as long as each system is far enough from the
others (so that only one data channel is active at one time) it works great.

the DJ-X3 is a basic radio has lots less than the others
but it is cheap
I'd go for the Icom being the newest of the lot

Daniel and others,

The same thing happend to me. Some nitwit complained on rec.radio.scanner that I posted inappropriate and ofensive material. My ISP (earthlink) actually banned me from newsgroup postings. I sent copies of my posts to them and the moderator but that didn't matter one whit. The post violated one of their rules. The post in question was a FA on ebay for a scanning transceiver. I had to apologize to earthlink and promise never to mis-behave again.

The power that the complainers and whiners have is tremendous. Posting For Sale items on rec.radio.swap is within the boundries of this group, but it was questionable on rec.radio.scanner. So, consider me educated....

Nick:
You have to escalate the issue past the first little
phone monkey that handles the problem. Never take "no"
from a grunt that doesn't have the authority to say "yes."
They are trained to "make the problem go away," not
actually solve it. If you go over the first grunt's head-
and sometimes even the second grunt's head-
Earthlink will check the group charter and,
assuming sales are not banned by the charter, be reasonable.

3735. Fast food frequencies?

Newsgroup: rec.radio.scanner
Date: 2003-04-29 01:36:45 UTC

I was searching Google to find fast food frequencies, but most lists seem to be very old and out of date. Anyone know where to find updated stuff?

I wanted to tune in using my new Icom R5 (which I love, BTW). Thought the kids would get a kick out of it the next time we go to Chik-fil-a.

Thanks, Harry

Kevin,

Here's a lnk (actually two) from the US Federal Aviation Administration Publication "Aeronautical Information Manual"

This link deals specifically with the ILS:

http://www1.faa.gov/ATpubs/AIM/Chap1/aim0101.html#1-1-9

And this link is the table of contents for the whole book:

http://www1.faa.gov/ATpubs/AIM/index.htm

Thia will give you alot (maybe too much!) information.

Hope this helps,

Genghis Kahn
Air Traffic Controller

Nick,
There are some sorry SOB's on these groups and they are
ROFLTAO right now that they hurt you.

I hope the very worst for them and they know who they are.

What goes around, comes around.

Burr

3743. Re: Fast food frequencies?

Newsgroup: rec.radio.scanner
Date: 2003-04-29 09:07:07 UTC
From: Jim Mac Donald <jmacdon@mitre.org>
Message-ID: <3EAE40BB.CC30E19F@mitre.org>
Source record: 31856

Try doing a search on the web at <http://www.cityfreq.com:81/>
for companies in the area. They may be listed under holding firms or
communications providers with BDAs at the end of the listings. Some
business frequencies will have multiples users and
wrap around for several lines of text! And tune the R-5 in the
Wide band FM mode, around 902 MHz to 929 MHz, new head sets are showing
up here. Also turn or search around the frequencies
you already have found. You may find the drive through on other
frequencies close by!

Once you find a frequency do a TONE SEARCH with the R-5 to see if any
tone coded squelch
is present. I have an R-2 and just got a Uniden® BC250 D with the BC25iD
digital card.
Last week I found a Mcd's around 469.3875 with the SERVICE SEARCH
"SPECIAL" feature with
the BC 250 D. I had tried the same location with the R-2 around 902-928
MHz with out amy luck.
Several donut shops and fast food drive throughs in Southern NH are in
the 902-928 MHz
range using WIDE FM mode and PL tones; have fun.
Jim

3745. Today in Newcastle

Newsgroup: rec.radio.scanner
Date: 2003-04-29 12:07:01 UTC
From: Garry <emergencymonitor@bigpond.com>
Message-ID: <1Xtra.24826$1s1.379881@newsfeeds.bigpond.com>
Source record: 31858

There was a house fire today in the Newcastle suburb of Bar Beach.

You can see pictures and hear a recording from the scene on our web page.

It's great to see our emergency services working so well together, getting
the job done

Visit http://newcastlescan.tripod.com
then click on the link on our front page called Bar Beach Red Red Red

Please sign our guest book

Garry & Mick

The IC-R5 looks nice but I've used one and wasn't impressed; it had lots of
wandering birdies and the memory system is, well, bloody awkward. However if
you can find an IC-R2 then bag it, it's a great radio which I can't fault
(how Icom managed to bugger things up so completely with the R5 is beyond
me.)

Earthlink has their nerve! Their horrible service I experienced caused me to dump them 3 years ago.

If you really want to have your eyes opened, read their so-called "privacy agreement." You've just about agreed to sign away everything to them except your birthday. Oppressive policies like theirs is what is killing the Internet by degrees. These outfits know this thing is a bubble that will implode so they are trying to make their cash grab now and it will serve them right. Fortunately there are still a few decent ISPs around. Try www.ambitlink.net. Above all else, keep in mind that you are their client...their CUSTOMER and THEY NEED YOU. It is NOT the other way around, regardless of what they try to make you think.

Vote with your feet and walk away...

Smokey

He got me for $57.78.For junk hard drive.
His name is Mark and he is an outrite crook.He sold me a hard drive that don't work at all on Ebay.Now he says they are sold as is.He would not give me a new one or my money back.He says send it to manufacturer for replacement.Now he hides from emails ,his phone is disconnected.and his address is a fake.
I have filed complaints with Ebay and Paypal.
What I do know is payment was sent to:
3715 W.Weaver Rd.
Brookline Station,Mo. 65619
according to Paypal records.
Enclosed is his mugshot he provides on his MSN profile.What a loser.

I don't know for certain what the salaries are like, but you won't
starve. Air traffic controllers have special regulations dealing with
just their pay scales. Yes, they are government employees, but this
is no ordinary government job. The big difference is that the higher
salaries only come with being able to handle more traffic. This
translates to stress. Whatever they earn, they deserve for having to
put up with the sort of stuff they deal with every day.

Air traffic controllers are paid reasonably well for their work; but
if you're looking to get rich, you can forget about this line of work.

Tried that already - the R5 memory system is unwieldy and unworkable. At least with the R2 I can scan a bank without having to waste time linking channels together. Why Icom didn't just divide the 1000 channels into 10 or 20 banks and enable banks to be scanned individually or in tandem is beyond me. I'll stick with my R2...tried and tested. :)

Hello everybody!
I'm from Italy and I am going to buy a scanner for my work. I must listen (only listen, of course) Police, Carabinieri and hospital frequencies. I am a beginner. A friend of mine suggests ICOM IC-R75.
Do you agree?
Stupid question: frequencies change in different regions of Italy?
Waiting your suggestions and answers...
Thanks
- Luca

The scumbag (a term I learned from an ex-cop) had problems. Unfortunately, because he was a cop and later the Chief of Police, he was not in and out of jail/prison like other scumbags are. It shows that there is a problem with the way we are monitoring the people we are entrusting with our peace, safety, and security. Police have too much power and authority and too many exemptions from the laws that we the people are subject to to allow them to go unmonitored. They asked that we let them monitor themselves, and we do, but it has become apparent that they are not doing so well enough. Far from it in fact. Things (the real world) need to change soon because the conditions are only getting worse.

You asked.

Frank

Most features for the bucks is Trident TRX-200 aka Camnis HSC350
aka Stabo 1810 for 298 Euro. It has 1000 memories, has all
the frequency steps, including 8.33 and 6.25 KHz. Does
SSB (USB+LSB) as well as CW on top of the normal NFM/WFM/AM.
Has a full keypad. Can be fully remote controlled from the
computer. Covers 100kHz to 2149 MHz. Shortwave reception sucks though.
Using my Sony 7600GR for that.

Overall, I am happy with my unit which I have had for around a month.

I was also considering the R5 and the VR-500 instead of the 120,
and ended up with the Trident, which Herbert Thieking (owner of
www.thiecom.de) recommended, and is using himself.

Normal gyro systems can do a pretty good work if they know where
they start out. And it is my guess that US missiles have a fallback
routine in case the GPS signal disappears, like aroound a nuke site..

>The scumbag (a term I learned from an ex-cop) had problems.

Seriously Frank, if you literally learned the term 'scumbag' from an ex-cop, you really don't get around much. Perhaps you might consider climbing down out of that ivory tower of yours and join reality.

>It shows that there is a problem with
>the way we are monitoring the people we are entrusting with our peace,
>safety, and security.

Yes, unless and until we get emotionless flawless robots to enforce the laws, these unfortunate instances will occur.

>Police have too much power and authority and too many
>exemptions from the laws that we the people are subject to to allow them to
>go unmonitored.

Unmonitored? In my area, cops' garbage and trash is examined 'just in case', private investigators follow cops and their families 'just in case', and other rights you and most people take for granted...are denied to cops...merely because they *are* cops.

>Things (the real world) need to change soon because the
>conditions are only getting worse.

Yes, please do all of us a favor, and move to France, where conditions seem to be more to your liking <g>.

I guess the main thing I would loose would be the fact that I have power backup good for about 16 hours that runs most of my electronic gear including tv/sat system. Also, I don't know how well the people will be about after hour repairs. I can now reach my dish to replace a faulty lnb for example.
I know that usually these things are very reliable so I will most likely let them hook me up the the master dish and then only complain if they have frequent problems.
Since I wrote the original message, the building maintenance man informed me that it is really being setup to supply people that don't have a clear view to the sats needed. Basically giving those people a choice over cable.
Thanks Everyone!

Ralph

You can scan the banks in tandem with the ICOM IC R-2 its just either
one (1) bank at a time by selecting BANK or ALL for the TEN BANKS AT THE SAME
TIME!
The way around this is to keep the channels loaded in say three (3) banks of
the R-2 small in number and just us three (3) or four (4) of the banks, with
the ALL setting.
Then when you select ALL it will only have to go through 3 banks.
With the computer software allowing for quick programing of memories its easy
to taylor the channels/banks in this way and change them on the fly.

I agree not being able to link several banks or just punch a bank number
to toggle them in and out of the scanning sequence is a pain! I think this is
what
ICOM was trying to do with the bank set up and frequency link up on the R-5.

I like the 780 over the 895 for six reasons: Digital might be OK but not
needed anywhere around where I live. Years from now, if I need it, there
will be newer and better scanners to buy then.

1. 500 vs. 300 channels (only a big deal if you need them)
2. You can scan trunk and conventional at the same time (BIG DEAL)
3. Alpha Tags (ANOTHER BIG DEAL)
4. More types of trunking can be scanned. (only a big deal if you need them)
5. Much more popular, more software available, better cable.
6. It's cooler to say you have the best. :)

You think that the proper response to a non-violent expression of resentment is to place your hands on the individual in a pain inflicting manner, then charge him with battery.

You also think that swearing at someone, then promptly departing, no threats, no refusal to leave, does sufficient harm in society that misdemeanor criminal charges are warranted. Not just an employer reprimand for unprofessional conduct, but criminal charges.

This serves to confirm to me that my two premises are correct.

#1 Police stand behind police. Just how outrageous must an officer's conduct be before you will no longer support him?

#2 Our laws and law enforcers go beyond what is necessary for the protection of society. They interfere with, and sometimes even charge, people whose activities are not causing any real harm or endangerment. And we've just been dealing with minor issues, we haven't even touched the serious abuses, civil forfeiture, no-knock entry tactics, random vehicle searches. Certainly we need laws and police, but we need reasonable laws and reasonable police. In 2003 (Orwell missed the mark, but not by much) people are more likely to be involved in a traffic stop which escalates into a drug search, then they are to be a victim of crime. That's unreasonable and infringing.

I have little sympathy for some idiot who has a witness report seeing him loading drugs into a car, who drives around in a car reeking of pot, or who says, "Hello Officer", with a joint tucked behind his ear. But to be searched because you fit some "profile", are driving through the "wrong" neighborhood, or because a passenger tells a different story of where you've been or where you're going. That constitutes government abusing it's power, and government abusing it's citizens.

If this is what it takes to lower the crime rate, I'd prefer to put up with a little more crime.

Furthermore, you claim that you are rigidly limited in how you can perform your duties. But in the same post you admit that you may legally pat down any individual you are officially interacting with. This kind of wide latitude does not reflect rigid limitations.

You're not thinking at all. You whiners wanted to give the UN inspectors "more time", and won't show anybody else the same courtesy NOW. The UN folks didn't stumble upon anything (not like they WOULD, especially with everything being moved and now captured Iraqi officials admitting they lied to UN inspectors) and we won't just happen across anything, either. But I really doubt that once the proof is in front of you that you'll apologize for your ignorance.
You're not interested in that "poor little kid" or anything else other than bashing the President of the United States of America.

Where did this come from?

>You also think that swearing at someone, then promptly departing, no
>threats, no refusal to leave, does sufficient harm in society that
>misdemeanor criminal charges are warranted. Not just an employer
>reprimand for unprofessional conduct, but criminal charges.

What initiated all this? Apparently this from an odd tangent.

>#1 Police stand behind police. Just how outrageous must an officer's
>conduct be before you will no longer support him?
>

If your premise is correct, explain the institution of Internal Affairs units,
civilian oversight organizations, the Civil Rights Division of the FBI, etc.,
etc.

>#2 Our laws and law enforcers go beyond what is necessary for the
>protection of society. They interfere with, and sometimes even
>charge, people whose activities are not causing any real harm or
>endangerment.

You can't have it both ways. If a law enforcement officer merely performs
his/her duties, you dislike it, *because* he/she is performing those duties.
Blame the legislatorsw, not the police, for making the laws you dislike.

Police aren't paid to make people happy, they're paid to enforce the laws, like
it or not. And if they *don't* perform their duties, then it's a criminal
offense in most jurisdictions...we call it 'malfeasance in office, and it's a
felony.

>Certainly we need laws and
>police, but we need reasonable laws and reasonable police.

Therein lies the rub! What is reasonable to one individual, is not...to
another. Certainly unfortunate incidents occur. But, unless we get a robot
police force, human beings are going to make human errors.

>In 2003
>(Orwell missed the mark, but not by much) people are more likely to be
>involved in a traffic stop which escalates into a drug search, then
>they are to be a victim of crime. That's unreasonable and infringing.

A traffic stop only ensues after 'probable cause' is demonstrated, correct?
And I wonder where you got your figures to make such a statement.

>But to be searched because you fit some "profile", are driving
>through the "wrong" neighborhood, or because a passenger tells a
>different story of where you've been or where you're going. That
>constitutes government abusing it's power, and government abusing it's
>citizens.

Any department that still allows its officers to make 'profile' stops does so
at its great risk...the Federal government has seen to that, like it or not.
And, if you *are* stopped, and your passenger tells 'a different story' than
the driver does, don't you think that would arouse an Officer's suspicions?
Hardly abuse.

>If this is what it takes to lower the crime rate, I'd prefer to put up
>with a little more crime.

Perhaps other people would prefer it another way. I, for one, detest the
outrageous tomfoolery that goes on in airports these days, in the name of
'security precautions'...it's incredible that the American people would allow
themselves to become cattle, all for the sake of 'security', so I can well
understand and sympathize with your concerns with overzealous traffic
enforcement.

>Furthermore, you claim that you are rigidly limited in how you can
>perform your duties. But in the same post you admit that you
>may legally pat down any individual you are officially interacting
>with.

Yes...and the Supreme Court of the United States allows it...it isn't something
a bunch of bored or overzealous cops came up with, just to intimidate or harass
anyone.

I have every right to protect myself and other members of the public when I
officially interact with people. Would you have it another way?

> This kind of wide latitude does not reflect rigid limitations.

Certainly it does! The pat-down is limited to weapons only...not drugs or drug
paraphernalia, etc. And, if an Officer sees fit to investigate further, then
he/she had better be able to articulate probable cause to do so. But you
already know this, do you not?

Source record: 31894

Jeff;
None that I know of., at this time. This would be a great set up. Even
if the only
channel controlled by the GPS coordinates was the PRIORITY so
when you entered a new area it would be up on the air! Or by bank, so when
again entering a different location the appropriate bank of frequencies
would be scanning.

I also don't know of any software application and hardware "black box"
that would
mate a radio scanner, GPS receiver and computer(also a frequency counter
would be nice)
to do this! The only thing that comes close is form Optolectronics
<http://www.optoelectronics.com/optolinx.htm> but again finding the
software application to
mate all this up would be the hard part.I don't see GPS suppor,t it is not
mentioned in the linx's description.
The market for such a set up may be quite small and limited, most folks
just us their radios
around town. And this set up would be geared for the "road warrior" !
May be in the next round on high tech improvements they will put a scanner
and GPS together.

Edgar;

Before you buy one of the radios.... do a web search for the on line owners manuals. Then down load them all and look over the features and specifications , do a comparison of each of them, so that you can make a informed purchase.

Also make sure the software and programming cable that work with the radio your interested in buying is available. Many software programs are also available on line for evaluation check them out b fore you buy. The software is just as important as the radio itself! Software makes a world of difference in the usability of these small radio scanning receivers. One accessory, if you want to do any shortwave HF work is an antenna tuner and about 50 Feet of wire!

well,
first thing to think about is this:
do you have that police officers name and ID #?
2. can you get a lawyer to subpeona the video tape in his car (they keep
those for up to a year)
3. I have read the NJ scanner law. That cop is definitely in the wrong.
His statements may actually qualify as "threat under color of law".

best thing you can do is file a complaint and have a lawyer handy.

Both of your need to grow up... I'm not hear to discuss you drug problem, or the fact that you can't seem to hold a job other than burger flipping...

Unfortunately, you are another that has no real right to comment on a story you have not read in it's entirety. He was NOT pulled over for a "bad tire"! That was the bogus bullshit that the cop MADE UP AFTERWARDS because he couldn't find anything else to warrant the stop! Learn how to read before you stick your foot in your ass! Oops, I mean you mouth! (One in the same anyway, as the only thing coming out of either is shit!)

Hello? The whole tire thing was the ONLY thing that he could claim was the reason for the stop because he couldn't find anything else to have warranted it! Don't you people read? Must all be a bunch of illiterate idiots!

Unfortunately for him, yes, he DID have what could be classified as a bad tire, it was pretty worn out. BUT, had he not had a bad tire, what the hell would have the made up excuse been then? I can tell you what... It would have been a MADE UP (fake) LAW! That is where the harassment is comes in. There was no legit reason for the stop in the first place, other than to harass. Around here, they pull people over, THEN FIND an excuse afterwards, whether it be legit, or made up. In any case, since the "reason" was found AFTER the stop, even if it was a legit thing, it could still be classified as "made up" due to the fact that the "problem", whatever it may be, was determined AFTER the stop.

Understand now? Probably not, your all think skulled!

In case anybody is interested, here is a nice little link that some might be interested in. It has LOTS of good info that those of us who have actually experienced problems with police offers can reflect upon. Might also be a good read for those that actually believe in the fairy tale that there isn't any problems of corruption, harassment, and lawlessness in today's law enforcement personnel...

It's more common place than most actually know or want to believe...

I'm sorry to hear that. Unfortunately, you are missing out on a LOT of good information. Ever heard the phrase, "Don't judge a book by it's cover"? Same goes for websites... Of course, unless you are a cop, feel free to let your rights be taken from you... It's your choice. Isn't freedom great?! Exercise it now while you still have it.

>
>
>You're not thinking at all. You whiners wanted to give the UN inspectors
>"more time", and won't show anybody else the same courtesy NOW.

They should have been given more time, all the time in the world. They weren't stumbling, they were searching methodically, often with useless information suppplied by the US that wasted time and resources. The US now has had almost as much time with far greater resources to find WMD, including custdy of all the people who would have had anything to do with and any knoweldge of any asuch programs. And what have they come up with? Zilch. Nada. Nothing.

>really doubt that once the proof is in front of you that you'll apologize
>for your ignorance.

I'll apologize. Will you?

> You're not interested in that "poor little kid" or anything else other than
>bashing the President of the United States of America.

Now that's a presumptious statement. You certainly have no concern for the dead and bereft. Since no WMD have been found and none are likely to be -- it has to be clear even to you at this point that even if such programs existed they were no threat to anyone -- can yuio thden tell us the real reasons for this war? Iraqi freedom? Does that mean you have concern for the armless child, etc.? Not to mention the fifteen or so killed yesterday.

Every last person - individually, if necessary. I just want all the
hypocrites to give the current unfettered inspections the time they'll need.
Even Hans admitted he doubted that the UN people would just "stumble" upon
anything, and they would need the cooperation of scientists and government
officials. Some within that old regime have already admitted to lying, and
at least one is seeking asylum in exchange for information.

For sale...

Uniden BC 250D Apco P-25 Digital Police Scanner with Apco P-25 Card
Monitors Apco P-25 conventional, trunked 3600 & mixed mode,
Digital communications.
The unit is only 1 1/2 months old and is in mint condition.
Unit works great. I need to sell it because the agencies in my area went to
a different system.
Comes with all the original paperwork, box, battery pack & charger.
I will not split up the card and scanner.
I paid $650.00 and must take the loss and sell it as used at $475.00
So if are looking for one of these, here is a chance to get it at a great
price.
you can check my feedback on Ebay user rating tramd300@aol.com
use this link for a picture of unit
http://members.aol.com/TRAMD300/BC250Scanner.jpg
And use this link for the specifications of the unit
http://www.snowcrest.net/marnells/factsheet.htm
You get this all for $475.00 shipped in the USA only.
I will accept postal money orders only or if you wish to use Pay-Pal.
Price is firm...
Please email me direct for more info.
I check my mail every day.
Thank you...

Monitoring them with a scanner in real time is not your right. People often mistake that with Freedom of Information. To comply with FOIA, all philly has to do is provide you, upon written request, a tape recording of that day's radio traffic and they have met their obligation.

Is it something I agree with? No, of course not. I love listening to my scanner and if my area encrypted all comms I'd be very upset over it. However, they do have the legal right to secure their systems anytime they wish. Sorry but that's just the way the cookie crumbles. *Legally* if they have encrypted there is nothing you can do about it. Outside of the law, there are ways. That's all I can say about that - if that's your choice then the internet contains a vast wealth of information that you might find useful. </hint>

Wanna bet $1,000 on that? Well I guess not, because I'm saying right here and now that you'd lose
that bet.

I don't need to hang on to anything. His shitty record stands for itself.

Once any evidence is found, and proved and authenticated without a doubt to be Iraq's WMD, then I'll
cheer whoever found it and proved me wrong. But the way things are going, it's not going into happen
in my lifetime, so I won't have to. Let the UN wep inspectors back in and I'll raise the odds that
they will be found and proven to be real.

John

I am sure he wont go silent: It all has nothing to do with WMDs, Iraqi
people etc. Like you said, it is just to try and discredit Bush. Purely
political. So when one issue is proven, he will move on and find another
distortion to spout. Hollow.

> Jim

- excellent advice... here are my views (i own an r2, vr120d, and vr500):

r2 - small, good audio, free programming software (tk2), decent battery life
downside is no alpha tags, but still a good radio... slightly deaf on
broadcast AM w/ducky.. green backlight...

vr120d - small, good audio, alpha tags, unbelievable battery life and has
ability to toggle int/ext AM bar antenna - my personal recommendation!
cool orange backlight, free programming software (tk120)

vr500 - small, keypad, good audio, broadcast AM reception on a par w/the r2,
BUT has a hidden 'narrow AM' mode toggle, making reception a tad better
expensive, but i got mine used from grove so i saved some $$$... good
battery life, free programming software (tk500)

i use one programming cable: RT Systems, CT-29A ($25)... these radios are
Linux compatible, which is a bonus as i won't let Windows infect any of
my computers...

3805. blind folks vs. police/fire/utilities scanner radios

Newsgroup: rec.radio.scanner
Date: 2003-04-30 21:05:43 UTC
From: Dan Jacobson <jidanni@dman.ddts.net>
Message-ID: <878ytr7l20.fsf@jidanni.org>
Source record: 31828
Cross-posted to: rec.radio.scanner,alt.disability.blind.social

I was thinking that for blind folks, listening to a
"police/fire/ambulance scanner radio" might be a lot of fun. However
I can't imagine how they could use more than 10% of the functionality.

However, if a local friend say "cloned" an updated list of selected
frequencies into their scanner, oh maybe once a year, then the blind
person would seemingly only need to know the on/off button, and a
scan/hold button...

Certainly, but you'll need to lengthen the elements. The spacing will
probably be OK, although maybe not quite optimal.

Hello:

For any Scantenna ST 2 antenna users:

Was wondering: are you using it (for receiving only) with the RG6 / SAT coax that came with the antenna, or a different coax ?

Thanks,

Bob

3810. Re: Scanstar explorer, scan*star,spectrum explorer information

As you probably can't afford a new Corvette either, would you like the address of a dealer where you can steal one?

sc180 in brand new condition (about 2 months old)
100 alphanumeric channels
has auto-light (squelch turns on backlight automatically)
have brand new leather glove fit case with clear plastic window
over keypad and display. Also has swivel belt clip. Box, docs and all original
accessories.
(i got a 250d so im not using it anymore)
thanks

$135.00

3812. Manual serial port switch box for programming scanners

Newsgroup: rec.radio.scanner
Date: 2003-04-30 22:47:02 UTC
From: Jeffrey Loomis <jloomis2k@NOSPAMhotmail.com>

I just picked up a 4 way manual switch box for serial (9 pin) cables. The idea is to hook it up to my computer and each of my scanner programming cables. Then whenever I need to program a scanner I just switch the box to the correct cable. This would save me from crawling under my desk every time I wanted to program a different scanner.

Do I need to worry about blowing out/frying my scanners when I switch the box from one scanner to another? I have read that you should not hook laser printers up to manual switch boxes for that very reason. I'd rather not destroy any of my scanners!

My Pro 2042/Opto535 is the only scanner that would be connected all of the time. I can plug in the other handheld scanners after I have already switched to the correct port on the switch box.

Thanks,

Jeffrey

3813. Re: blind folks vs. police/fire/utilities scanner radios

Newsgroup: rec.radio.scanner

With today's technology, voiced internet and instruction manuals, you might
do well to ask your blind friend to program your scanner for you.
